1. INTRODUCTION

1.1 Terms of Reference

Geosyntec Consultants, Inc. (Geosyntec) has prepared this Closure and Post-Closure Care Plan (Closure Plan) on behalf of NextGrid Manchester Landfill, LLC of Boston, Massachusetts (Developer). The Closure Plan was prepared in accordance with the New Jersey Department of Environmental Protection (NJDEP) regulations for sanitary landfills promulgated by New Jersey Administrative Code (NJAC) 7:26-2A.9 (solid waste regulations) and described in the *Technical Manual for Sanitary Landfill Permits and Approvals*, prepared by the Bureau of Landfill and Recycling Management-Division of Solid and Hazardous Waste, dated March 1999 (1999 Technical Manual). A summary of the requirements of the solid waste regulations and the respective sections where each of the requirements is addressed in this Closure Plan is presented in Table 1. Where applicable, Table 1 also refers to the checklist item number used in the 1999 Technical Manual.

This Closure Plan describes the proposed closure of the Manchester Township Landfill, which will support the subsequent installation of a solar energy system on the closed landfill by the Developer.

1.2 Site and Project Description

The Manchester Township Landfill (landfill) occupies approximately 30 acres within Block 116, Lot 13 in Manchester, Ocean County, New Jersey (Figure 1). The property and the landfill are owned by Manchester Township. The landfill is surrounded by generally undeveloped forest, with New Jersey State Route 70 approximately 300 feet to the south and a residential property approximately 350 feet to the east.

Geosyntec (2023) presented a hydrogeologic framework update (Final Hydrogeologic Investigation Report) (Attachment A) of the landfill pursuant to a request from the New Jersey Pinelands Commission regarding compliance of the proposed closure with the Pinelands Comprehensive Management Plan (CMP). The Final Hydrogeologic Investigation Report summarizes the field investigation procedures and results for evaluating the groundwater elevation, groundwater analytical testing, and surface water evaluation and presents conclusions regarding impacts to groundwater to support the proposed use of a permeable cover system to close the landfill. Based on the information in that report, this Closure Plan proposes a soil cap to close the landfill.

The Developer has executed a lease agreement with Manchester Township to close the landfill and develop a solar energy system on the landfill. This Closure Plan has been prepared to include the construction and maintenance of a final cover system and associated systems and installation of solar energy systems on the final cover system.

Manchester Township has proposed the existing composting operation, public recycling facility, and deicing material storage structure (i.e., the salt shed) remain during or be returned to the landfill following closure as permanent post-closure uses. Based on pre-submission

communications with NJDEP Division of Sustainable Waste Management (DSWM), the proposed post-closure uses are acceptable if the final cover system is designed and maintained to accommodate such uses, as discussed in Section 2.1.

As shown on the *Manchester Township Landfill Closure Drawings*, dated December 2025 (Drawings) (Attachment B) and described in the Specifications (Attachment C), closure includes re-grading of the landfill, relocation of wastes within the landfill during re-grading, relocation of the existing salt storage shed, and installation of a permeable final cover system. The limit of closure shown on the Drawings was based on the results of a field investigation completed by Maser Consulting, P.A. (Maser) and presented in a January 2020 letter report (Landfill Delineation Report, Maser, 2020a) (Attachment D).

1.3 Solid Waste Facility Permit Application

A Solid Waste Facility Permit Application has been prepared for the proposed closure. The application will be submitted to NJDEP under separate cover.

1.4 Soil Erosion and Sediment Control Plan

A Soil Erosion and Sedimentation Control (SESC) Plan has been prepared for the closure construction in accordance with the requirements of The Standards for Soil Erosion and Sediment Control in New Jersey (7th Edition, January 2014, Revised July 2017) and Ocean County Soil Conservation District (SCD) (Drawings 11, 12, and 13 of Attachment B).The SESC Plan and supporting documentation will be submitted to the Ocean County SCD prior to or concurrent with the submittal of this Closure Plan to NJDEP.

1.5 Health and Safety Plan

The Developer will contract a qualified contractor to perform the closure construction. As part of the pre-construction and mobilization phase of the closure construction, the contractor will be required to submit a site-specific health and safety plan (HASP) that addresses the major components of the work and the associated hazards. A summary of the minimum requirements for a HASP appropriate for the work is included in Specification Section 01 35 29.13 (Attachment C).

1.6 Policies and Technical Guidance for Landfill Disruption Activities

The following discussion is included with this Closure Plan in accordance with the Policies and Technical Guidance for landfill disruptions in Section 9, Paragraph IV of the 1999 Technical Manual.

Many of the eighteen guidelines in Section 9, Paragraph IV of the 1999 Technical manual are implicitly addressed by the discussion of the closure and post-closure care requirements presented in this Closure Plan. Specifically, application forms, topographic map, extent of operations, purpose of disruption, elevation drawings, cover, removal of waste, SESC Plan, control of water, leachate controls, odor, gas, vectors, dust, and litter, HASP, discovery of unclassified or hazardous waste, soil borings, certification by a Professional Engineer, and schedule of activities are

addressed in the various sections of this Closure Plan. The remaining guidelines, are addressed as follows:

- Pre-Application Meeting: Geosyntec and a representative of the Developer participated in a pre-application meeting on behalf of the Developer on 13 October 2022. Ross Hull of the DSWM attended the pre-application meeting.
- Property Deed: The landfill property is owned and operated by Manchester Township (Attachment E.1). The Township and NextGrid have executed a lease agreement to allow NextGrid to close the landfill and construct a solar energy system on the landfill (Attachment E.2).
- Utility Lines: No underground utility lines within the limits of the landfill are proposed as part of the closure and solar development.
- Departmental Permits: The permits and approvals anticipated for this work are listed on the Solid Waste Facility Application Form to be submitted to NJDEP under separate cover.

2. CLOSURE PLAN AND POST-CLOSURE CARE PLAN

Narrative descriptions of the construction and maintenance of the proposed final cover system pursuant to the requirements presented in the 1999 Technical Manual and solid waste regulations of NJAC 7:26-2A.9 are presented in the following sections. The material and execution requirements for the landfill closure construction are provided in the Landfill Closure Drawings (Attachment B) and Construction Specifications (Attachment C).

The components of the proposed solar energy system to be constructed on the final cover system, as they are relevant to the performance and integrity of the final cover system, are described in Section 3. A brief discussion of the operations and maintenance of the solar energy system is also included in Section 3.

2.1 Final Cover System [NJAC 7:26-2A9 (e)(4)(ii)]

NJAC 7:26-2A9 (e)(4)(ii) describes the requirements for the design and construction of landfill final cover systems and refers to specific requirements of NJAC 7:26-2A7(i). These requirements are addressed in the following sections.

The proposed final cover system will be an alternative to the cover system prescribed in NJAC 7:26. The proposed cover system is a permeable soil cover based on, in part, the Final Hydrogeologic Investigation Report (Geosyntec, 2023) (Attachment A) described in Section 1.2. To accommodate the future solar energy system and the post-closure landfill uses proposed by Manchester Township, there will be multiple final cover systems, as follows:

- Type I Cover System: The Type I Cover System will be the standard cover system used in areas without a proposed post-closure use (including the restored existing salt shed area), and in areas in which the future solar energy system will be constructed. The Type I Cover System will comprise an 18-inch soil infiltration layer and a 6-inch topsoil layer to support vegetation.
- Type II Cover System: The Type II Cover System will be used in the composting area. The Type II Cover System will comprise a 24-inch soil infiltration layer and a 12-inch aggregate surface layer.
- Salt Shed Area Cover System: The cover system in the relocated salt shed area will comprise a 24-inch soil infiltration layer and a 12-inch Crushed Stone layer to facilitate integration of the induced draft gas vents (see Section 2.1.12) and subsequent installation of asphalt pavement.
- Public Recycling Area: The Public Recycling Area will include structural fill layer and a 12-inch aggregate surface layer; the Public Recycling Area will be approximately six feet above the adjacent Type II Cover System and will be retained with concrete bin blocks.
- Landfill Entrance: A specific cover system will not be installed in the Landfill Entrance. The Landfill Entrance will remain as is with existing asphalt pavement.

The final cover system will be constructed on a prepared subgrade surface comprising compacted soil or waste to provide a firm surface on which the final cover system will be placed.

2.1.1 Minimization of Long-Term Infiltration [NJAC 7:26-2A7(i)(1)]

Per NJAC 7:26-2A7(i)(1), the proposed final cover system will be constructed to minimize, to the extent feasible for a permeable soil cover system, long-term infiltration and percolation of liquid into the landfill throughout the closure and post-closure periods. The closure is designed to minimize infiltration by efficiently shedding stormwater to the surface drainage system and promoting vegetation growth to facilitate evapotranspiration.

Final cover system slopes, the surface drainage system, and vegetation, are described in Sections 2.1.5, 2.1.6, and 2.1.11, respectively, of this Closure Plan.

2.1.2 Minimum 2 Feet of Cover [NJAC 7:26-2A7(i)(2)]

The requirements of NJAC 7:26-2A7(i)(2) apply only to Class II and Class III landfills. As the Manchester Township Landfill is a Class I landfill, this requirement is not applicable.

2.1.3 Permeability of Final Cover [NJAC 7:26-2A7(i)(3)]

The Manchester Township Landfill is unlined and, as described in Section 1.2 and 2.1, based on the site-specific Final Hydrogeologic Investigation Report (Geosyntec, 2023), a permeable cover system is proposed. Therefore, the permeability criterion of this requirement is not applicable.

However, consistent with the other criteria of this requirement, the final cover system will comprise an 18-inch protective cover layer and a 6-inch topsoil layer, which will be vegetated to minimize erosion of the final cover system.

The final cover system will be constructed and maintained to the lateral limits of waste and, therefore, completely isolate the underlying waste from direct exposure to the surrounding environment.

2.1.4 Slope Stability [NJAC 7:26-2A7(i)(4)]

The cover system will be constructed to maintain stability and integrity throughout the closure and post-closure periods under static and seismic conditions, in accordance with NJAC 7:26-2A7(i)(4), including when subjected to the loads imparted by the future solar energy system. Global stability of the post-closure conditions was evaluated under static and seismic loading conditions and met the required factors of safety in NJAC 7:26-2A7(b)(3i) (Attachment F.1), including under the potential load of the future solar energy system. The stability of the bin block wall component of the recycling area was also evaluated. As requested by NJDEP during a pre-submittal review of the closure design the stability of the bin block wall for was evaluated relative to the Uniform Construction Code (UCC). Based on the site location, the retaining wall is classified as Seismic Design Category A. Further, Section 1807.2.2 of the UCC defines the following criteria for lateral soil loads relative to the Seismic Design Category (A through F). Becasue the retaining wall is classified as Seismic Design Category A, there is no requirement to evaluate additional seismic lateral earth pressure for the bin block wall in accordance with Section 1807.2. Nonetheless, a

review of applicable design criteria was performed under the UCC and the factors of safety (FS) for the bin block wall was found to be above 1.1 as recommended by NJDEP. Therefore, no changes to the analysis are necessary at this time.

Because the final cover system is permeable soil cover and has maximum slopes of 3 horizontal to 1 vertical (3H:1V), veneer stability of the cover system is not a critical failure mechanism and therefore was not analyzed.

2.1.5 Slope Grades [NJAC 7:26-2A7(i)(5)]

As shown on the Landfill Closure Drawings (Attachment B), to support the proposed post-closure use as a solar energy development, the final cover system will generally comprise slopes of approximately 3 to 4 percent, with the exception of limited areas at the landfill perimeter and around the paved landfill entrance and Salt Shed Area, where slopes will be as steep as 3H:1V to facilitate tying the landfill final grades into the surrounding topography.

As communicated with representatives of the DSWM prior to preparation of this closure plan, the closure subgrades are to be established using material already placed in the landfill. Limited material is available on-site for regrading to meet the slope requirements of NJAC 7:26-2A7(i)(5). Nonetheless, settlement analysis of the proposed slopes (Attachment F.2) indicates that the minimum post-settlement slope along drainage paths is expected to be greater than one percent along some slope segments, including under the load of the solar energy system. While this slope is less than the minimum prescribed by the solid waste regulations, the landfill is expected to maintain positive stormwater drainage to the surface drainage system, though some additional maintenance may be required to do so.

2.1.6 Surface Drainage System [NJAC 7:26-2A7(i)(6)]

As shown on Drawing 4 of the Closure Drawings (Attachment B), stormwater runoff is managed by stormwater diversion berms located near the perimeter of the landfill and adjacent to key infrastructure. These diversion berms convey runoff into the stormwater management basins that are outside the limits of the landfill to minimize infiltration through the cover system. The stormwater runoff is retained onsite through a series of six infiltration basins located outside the limit of the landfill. All the proposed infiltration basin systems include a sediment forebay and four of the six systems include a bioretention basin.

Stormwater best management practices were designed to control runoff from the projected 100-year, 24-hour storm event, as shown in the stormwater calculations (Attachment F.3).

2.1.7 Initial Settlement [NJAC 7:26-2A7(i)(7)]

In accordance with NJAC 7:26-2A7(i)(7), the final cover system will be constructed to maintain the integrity of the cover system throughout the closure and post-closure period, even after settlement has occurred (Attachment F.2). Settlement analysis indicates that differential settlement will be minimal and within the tolerance of a permeable soil cover, including under the load of the solar energy system.

2.1.8 Grading and Stability of Final Waste Lifts [NJAC 7:26-2A7(i)(8) and (9)]

The proposed closure will require the excavation and relocation of approximately 110,000 cubic yards of waste and existing cover soils to achieve the design grades. If additional waste is identified outside the proposed limit of the final cover system (e.g., in stormwater infiltration basins) the waste will be excavated and relocated to within the landfill closure limit and placed beneath the final cover system. The extent of waste removal from such areas will be based on visual observation. Where total removal of the waste outside of the landfill footprint is not practical, in conference with NJDEP, waste will be over excavated and removed to allow for the construction of a minimum of 2 feet of clean soil cover, with deeper waste remaining in place. Asphalt millings encountered in stockpiles on the landfill or generated by the removal of paved areas will be transported off-site for management at a licensed Class B recycling facility.

Excavated waste will be redeposited within the landfill footprint. In accordance with NJAC 7:26-2A7(i)(8), regraded waste will be placed and compacted in controlled lift thicknesses and proof-rolled prior to placing final cover material to provide a sufficiently planar and firm subgrade. Subgrade established by excavating in undisturbed waste will be proof-rolled to demonstrate stability and provide a planar and firm base for final cover system.

To the extent practical, the area of excavation resulting in exposed waste will be limited for the types and number of excavation and hauling equipment used. Based on the age of the waste, odors and vectors (e.g., vermin) and blown litter are not expected to be a concern. Further, based on the location of the landfill and age and composition of the waste (i.e., inert household refuse), the uncovered waste is not expected to create an environmental or public health nuisance or a safety hazard. However, to control the potential for odors, vectors, and litter and minimize the potential for environmental or public health nuisance or a safety hazard posed by exposed waste, existing cover soils will be stripped and stockpiled prior to waste disturbance in a particular area for use as daily cover during waste relocation in that area.

General criteria for the relocation and compaction of waste, handling, and assessment of unclassified or potentially hazardous waste, application of daily cover, and measures to control odors, vectors, and blown litter are included in the Specifications (Attachment C). Specific means and methods for addressing those criteria will be described in a contractor waste excavation and relocation plan to be prepared during the pre-construction phase and provided to DSWM at that time for review.

If field observations indicate that additional physical or chemical stabilization is necessary to provide a suitable subgrade for final cover construction, the Engineer will provide a recommendation at that time in accordance with NJAC 7:26-2A7(i)(9) to provide a sufficiently planar and firm subgrade.

Further, during the excavation and relocation of waste, dust controls will be implemented regularly, as needed based on site conditions, and stormwater controls will be implemented to minimize run-on to and run-off from exposed waste. General criteria for the management of water and liquids in contact with waste (leachate) are included in the Landfill Closure Specifications

(Attachment C). Specific means and methods to manage leachate will be described in a contractor waste excavation and relocation workplan to be prepared during the pre-construction phase and provided to DSWM at that time for review.

2.1.9 Impermeable Layer [NJAC 7:26-2A7(i)(10)]

As the approved cover system is a permeable soil cover, the requirements of this section are not applicable.

2.1.10 Drainage Layer [NJAC 7:26-2A7(i)(11)]

The final cover system does not include a drainage layer. Because the final cover is a permeable soil cover, the lateral drainage provided by a drainage layer is not necessary to maintain the integrity of the final cover system. As such, the requirements of NJAC 7:26-2A7(i)(11) are not applicable.

2.1.11 Vegetative Layer [7:26-2A7(i)(12)]

In areas where the cover system will be vegetated (i.e., the Type I Cover System), the vegetative (or topsoil) layer will be six inches thick, as shown on Detail 1 on Drawing 7 of the Drawings, which is suitable thickness for the native grass mix to be used to vegetate the final cover system. Permanent vegetation will be seeded, fertilized, and mulched in accordance with New Jersey erosion and sediment control standards for permanent vegetation. Specific topsoil material properties are described in the Landfill Closure Specifications (Appendix F).

2.1.12 Gas Venting Layer [NJAC 7:26-2A7(i)(13)]

In accordance with NJAC 7:26-2A7(i)(13), the final closure will be constructed to prevent and control the migration of landfill gases off-site. The results of a pre-design landfill gas survey performed by Maser in August and September 2020 (Figure 5 of Attachment D) indicate that concentrations of methane at the perimeter of the landfill generally range from 0.0 percent to 2.8 percent with a maximum concentration of 13.3 percent at boring SB04. Methane concentrations inside the landfill near the perimeter are as high as 14.9 percent at boring SB06.

Based on these results, a gas venting system comprising a combination of passive and induced draft landfill gas vents will be constructed during the landfill closure (Drawing 4 of Attachment B). Passive and induced gas vents will be installed along the perimeter of the cover system to mitigate horizontal migration of landfill gas. Most methane concentrations are below approximately 25 percent of the lower explosive limit (LEL) for methane. Near these locations, passive vents will be installed at a maximum 300 ft spacing. Near perimeter survey locations where the methane concentration was measured above 25 percent of the LEL (SB04, SB06, and SB15) induced draft gas vents will be installed at a maximum spacing of 100 feet. Additional induced draft gas vents will be installed along the perimeter of the new salt shed area to mitigate methane concentration above 25 percent of the LEL in that area.

The passive and induced draft gas vents will be constructed of vertical slotted or perforated polyvinyl chloride (PVC) pipe and clean aggregate to allow gas migrating horizontally in the waste

to be vented to the atmosphere. The vents will fully penetrate the unsaturated waste to the bottom of waste or to the groundwater table, whichever is shallower. Induced draft vents will be constructed similar to the passive vents, but with a turbine ventilator fitted to the top of the vent to facilitate additional venting. If observations during the post-closure period indicate that the system of passive vents is not adequate to control landfill gas migration, additional measures will be implemented.

Following closure, methane gas surveys will be performed in accordance with NJAC 7:26-2A8(h)(9). Surveys will be performed quarterly around the perimeter of the landfill buffer (i.e., 50 feet from the landfill boundary) at survey locations spaced at a maximum of 300 feet. Additional locations will be surveyed around the salt shed. These locations will be spaced at 50 feet or, at a minimum, one location each side of the structure, whichever is more frequent.

Surveys will include the collection of methane concentration from 3 feet below ground, in accordance with NJAC 7:26-2A8(h)(9). If the surveys indicate no methane gas at the landfill buffer perimeter, the Developer or Township will coordinate with DSWM to reduce the sampling frequency and/or increase sample spacing.

2.1.13 HELP Model [NJAC 7:26-2A7(i)(14)]

As the landfill is unlined and a permeable cover system has been approved by the Pinelands Commission, the requirements of NJAC 7:26-2A7(i)(14) are not applicable.

2.2 Final Cover Vegetation and Maintenance [NJAC 7:26-2A9 (e)(4)(iii), (iv), and (v)]

Following the placement of cover soil to its design thickness in areas that are not to be disturbed prior to installation of the solar energy system, the cover system will be stabilized using a temporary seed mixture to be selected for the appropriate season for Table 7-2 of the Standards for Soil Erosion and Sediment Control in New Jersey (NJ Department of Agriculture, 2017) (SESC Manual). Temporary seeding, fertilizing, and mulching will be performed in accordance with the SESC Manual. If the cover system is placed during a season or under conditions that will not allow for vegetation to be established (e.g., the winter), temporary stabilization may be established by mulching only in accordance with the SESC Manual.

Upon completion of the solar energy system installation, disturbed areas of the final cover system will be re-vegetated with a native grass mix appropriate for the soil and climate conditions expected at the landfill (e.g., Warm Season Seed Mixture 3 of the SESC Manual). The seed mixture will be applied at the rate specified by the manufacturer and will be applied either by hydro-seeding or with a mechanical spreader. Following seeding, the area will be lightly raked or pressed with a seed roller to ensure proper soil-seed contact. The seeding area will then be fertilized per the manufacturers specifications and/or agricultural soil suitability test(s) and mulched with a biodegradable straw or erosion control mat, where necessary, to conserve moisture and prevent erosion while vegetative cover is becoming established. Watering during establishment of

vegetative cover will be conducted based on weather conditions and per seed supplier recommendations.

Vegetation will be inspected quarterly to identify areas of erosion, gaps/cracks, or slope movement. Repair of erosion rills and other maintenance to the slopes will be performed as necessary to ensure stable slopes. If sparse vegetation or erosion is observed during the inspection, the cover system will be repaired as soon as feasible in accordance with the design specifications. Because there is no geomembrane or specific drainage layer component of the cover system, vegetation will not be limited to any specific height, nor will the vegetation require any specific mowing schedule, other than as needed to maintain adequate performance of the solar energy system (i.e., to prevent shading of the solar panels) and control woody vegetation. Mowing is expected to occur between one and three times per year. Because woody vegetation has the potential to create preferential flow paths for water through the cover system, inspections will document woody vegetation and it will be addressed as soon as feasible by removing the vegetation by hand or mowing.

2.3 Run-on and Run-off Control Program and Maintenance [NJAC 7:26-2A9 (e)(4)(vi) and (vii)]

As discussed in Section 2.1.6 of this report, stormwater runoff is managed by infiltration basins, sediment forebays, and bioretention basins outside the perimeter of the landfill. The infiltration features are designed to retain and infiltrate most of the stormwater runoff from the projected 100-year, 24-hour event. Attachment F.3 includes the Operation and Maintenance Plan for the proposed Site stormwater management system.

Maintenance requirements for the infiltration features are summarized in the *New Jersey Stormwater Best Practices Manual Chapter 10.2: Infiltration Basins* (NJDEP, March 2021). Maintenance is essential to the operation of the BMPs and should be conducted in a timely manner. The structural components should be inspected quarterly, and components expected to receive debris (e.g., sediment forebays) should be inspected for clogging quarterly as well as after every storm exceeding 1 inch of rainfall. Furthermore, sediment removal should be conducted only when all runoff has drained from the infiltration features and the basin is dry. Maintenance will be performed by Manchester Township and costs for this maintenance will be added to the municipal budget by resolution.

Note that there is no potential for run-on as the landfill topography is higher than the perimeter of the Site.

2.4 Groundwater Monitoring [NJAC 7:26-2A9 (e)(4)(viii), (ix), and (x)]

A network of monitoring wells has previously been established to monitor groundwater in the vicinity of the landfill. The wells will remain in place during and following landfill closure and solar energy system construction. Provisions for raising, lowering, or otherwise modifying the wells in accordance with NJDEP requirements will be included in construction documents prepared prior to landfill closure construction.

2.5 Landfill Gas Venting System and Maintenance [NJAC 7:26-2A9 (e)(4)(xi) and (xii)]

As described in Section 2.1, the closure design includes a passive landfill gas venting system. Maintenance of the system will consist of visual inspection of exposed components during quarterly inspections. If observations during the inspections indicate damage to the landfill gas venting system, the damaged components will be repaired as soon as feasible to restore the components to their original condition.

2.6 Leachate System and Maintenance [NJAC 7:26-2A9 (e)(4)(xiii) and (xiv)]

The landfill is unlined and, therefore, there is no leachate collection and control system. As such, NJAC 7:26-2A9 (e)(4)(xiii) and (xiv) are not applicable.

2.7 Facility Access and Maintenance [NJAC 7:26-2A9 (e)(4)(xv) and (xvi)]

The landfill is accessed via Sam Pitts Road from a single entrance along at John Davison Rockefeller Memorial Highway (State Route 70), which is secured when the landfill is closed by a double-swing pasture gate. A security fence will be installed around the perimeter of the solar energy facility to restrict unauthorized access to those areas.

The existing access roads, including Sam Pitts Road, will generally be re-constructed at final landfill closure grades generally along the same alignment as the existing road, though some of the existing side roads will not be returned (Drawing 4 of Attachment B). The proposed access road is shown in a detail on Drawing 7 of Attachment B. Temporary access roads will be constructed as necessary during closure to facilitate installation of the final cover system and other closure components.

The security fence, gates, and access roads will be inspected during the quarterly inspection and repaired or otherwise maintained as necessary. Should maintenance of the final cover system or the access roads themselves require equipment that may affect the integrity of the final cover system, additional measures (e.g., crane mats, additional aggregate, etc.) will be taken to protect the final cover system. The final cover system will be disrupted only with prior approval of the NJDEP and will be restored to pre-disturbance conditions in accordance with the closure design and provisions of the disruption approval.

2.8 Conformance to Surrounding Areas and Maintenance [NJAC 7:26-2A9 (e)(4)(xvii) and (xviii)]

Considering the proposed post-closure use of the landfill (i.e., solar energy system) and the areas surrounding the landfill (i.e., forest) the closure will be constructed to conform to the surrounding areas. Measures to conform to the surrounding areas include vegetating the final cover with native grasses, minimizing mowing of the final cover vegetation, controlling stormwater and promoting infiltration outside the limits of waste, and minimizing disruption of undisturbed areas outside the landfill perimeter.

During the inspection of the final cover system, particular attention will be paid to stormwater discharge locations and proposed final cover system vegetation to ensure the closure continues to conform to and integrate with the surrounding areas. Where the inspections indicate that a repair is necessary, such repairs will be made as soon as is feasible.

2.9 Material Acceptance Protocol [NJAC 7:26-2A9 (e)(4)(xx)]

A material acceptance protocol (MAP) describing the physical properties, testing, and use of imported surface and subgrade materials is presented in Attachment G.

3. SOLAR ENERGY SYSTEM

The final component of the landfill closure is the construction of a solar energy system on the east and central portions of the landfill cover system. Narrative descriptions of the installation and maintenance of the proposed solar energy system are presented in the following sections.

3.1.1 Description of the Solar Energy System

The proposed 4.7 mega-watt (MW) direct current (3.2 MW alternating current) solar energy system will be installed entirely on the nominal 3 percent slopes of the proposed final cover system and will occupy approximately up to 20 acres of the 30-acre cover system, as shown on Drawing 3 of the Permit Drawings (Attachment B). The solar facility will comprise of Heliene 144HC M10 SL BIFACIAL 530W PV PANELS and Solectria XGI inverters, as shown on the solar facility structural drawings (Attachment H). The solar facility will be secured by a secondary perimeter fence to control access from publicly accessible areas (i.e., the composting operation and recycling facility). The solar array layout has been designed to allow for post-closure operations and maintenance of the landfill and final cover system.

The solar energy system will be installed on concrete ballast blocks placed on top of the final cover system to distribute the load of the solar panel racks. The actual size of the ballast blocks has not yet been determined. However, the final sizing will consider the geotechnical properties of the subgrade and the size will be such that the loads do not damage the final cover system. The ballast blocks will not penetrate the cover system. Ancillary equipment such as transformers and conduit runs will also be mounted atop the final cover system in a manner that does not affect the integrity of the final cover system. Where required, utility poles to facilitate overhead power transmission lines may be installed within the landfill. As described in previous sections relative to the existing utility poles, the presence of the pole will not impact the performance of the permeable final cover system.

3.1.2 Solar Energy System Installation

The ballast blocks and solar panels will be installed using low-ground pressure equipment and vehicles to the extent feasible to minimize impacts to the final cover system. Where necessary to accommodate higher ground pressures, the final cover system will be protected using a combination of geotextile cushion/separator, clean fill layers (e.g., additional thickness of the protective cover), crane mats, etc.

The final cover system will be inspected on a regular basis during the solar energy system installation and following the completion of work in each area. Where the inspection indicates damage, appropriate repairs will be made in accordance with the specifications for the initial cover system installation. All repairs will be documented for inclusion in the final cover system record drawings.

3.1.3 Solar Energy System Operations and Maintenance

The solar energy system will be inspected and maintained by the Developer while the solar energy system is being operated. This work will be performed the Developer's representatives or their approved subcontractors or authorized vendor (i.e., manufacturer of components used in the solar energy system) representatives. The area where the solar energy system is located and the immediate proximity of the electrical equipment will be accessible only by authorized personnel. Operations and maintenance of the final cover system will be performed as described in the previous sections of this Closure Plan.

Maintenance of the landfill final cover system and all associated control systems (i.e., stormwater drainage system, landfill gas venting system, etc.) regardless location inside or outside the solar energy system area will remain the responsibility of Manchester Township. At the end of the operation period, the solar energy system and associated equipment will be removed from the landfill and any necessary repairs to the final cover system will be made to return the cover system to its initial condition. At such a time, the Manchester Township will accept responsibility for operations and maintenance of the entire landfill.

4. SCHEDULE

In accordance with NJAC 7:26-2A9 (e)(5), a schedule of contractor procurement and construction activities related to final closure is included in Attachment I.

5. CLOSURE AND POST-CLOSURE FINANCIAL PLAN

In accordance with NJAC 7:26-2A9 (f), the following information is included with this closure plan regarding financial planning of the proposed landfill closure:

5.1.1 Closure Funding

The closure will be funded by the Developer. With the revenues to be received from the sale of electricity generated by the solar energy system, the Developer is able to raise financing to pay for the landfill closure.

The cost estimate to implement this closure plan is $5,601,215. This estimate has been prepared by Developer with support from contractors. A detailed summary and supporting documentation is provided in Financial Schedule "A" (Attachment J).

5.1.2 Post-Closure Funding

Post-closure activities will be the responsibility of Berkeley Township and costs for post-closure activities will be added to the municipal annual budget. A budget of $86,00 has been added to the 2026 municipal budget in accordance with Financial Schedule "B" (Attachment J) and will be updated annually. Additionally, Berkeley Township currently performs ground water sampling well maintenance and ground water monitoring and reporting associated with NJPDES Permit No NJ0051896 and this budget amount of $22,000 will be relocated to the 'Landfill Maintenance' line item in the municipal budget

Because Manchester Township is funding the post-closure activities through a budget line item, there will be no escrow account and Financial Schedule "C" is not applicable.

6. CERTIFICATION

A Solid Waste Facility Permit Application form and this Landfill Closure and Post-Closure Care Plan have been prepared in accordance with the NJDEP Solid and Hazardous Waste Management Program Regulations NJAC7:26-2A.9 and the Technical Manual for Sanitary Landfill Permits and Approvals, prepared by the Bureau of Landfill and Recycling Management-Division of Solid and Hazardous Waste, and dated March 1999.

I certify that, to the best of my knowledge, all information contained in this report is accurate and complete.

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals under my supervision, I believe the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I understand that, in addition to criminal penalties, I may be liable for civil administrative penalty pursuant to NJAC 7:26-5 and that submitting false information may be grounds for denial, revocation or termination of any solid waste facility permit or vehicle registration for which I may be seeking approval or now hold.

EXECUTIVE SUMMARY

Geosyntec Consultants, Inc. conducted a hydrogeologic investigation of the Manchester Landfill in Manchester, New Jersey (the Site) on behalf of NextGrid, Inc. in support of plans to construct a solar power facility at the Site. The Site is approximately 99 acres, and the landfill occupies approximately 30 acres of the Site. The landfill is no longer in use, but the Site is used for other municipal activities including a police shooting range, recycling, and storage of salt and equipment.

The purpose of the investigation was to complete the characterization of potential impacts to groundwater to support plans for landfill capping and closure. A previous investigation had been conducted by Maser Consultants, Inc. in 2020 and included collecting and analyzing groundwater samples from four monitoring wells. The current investigation included installing four additional monitoring wells and collecting groundwater samples from the new and existing monitoring wells. The work was coordinated with the Pinelands Commission (PC).

Well installation was conducted in September 2021. Depth to water measurements and groundwater sampling were conducted in October 2021. The groundwater samples were analyzed for 1,4-dioxane, Target Compound List semi-volatile organic compounds (SVOCs), Target Analyte List metals, and landfill leachate parameters. Samples from the new wells (MW-5S, MW-5D, MW-6S, and MW-6D) were analyzed for perfluoroalkyl and polyfluoroalkyl substances (PFAS). Samples from wells MW-6S and MW-6D were analyzed for endocrine disruptor compounds (EDCs). A report describing the results of that sampling was submitted to the PC in December 2021. PC reviewed the report and requested certain revisions and additions. A revised report was submitted to PC in June 2022.

After reviewing the June 2022 report, PC required installation and sampling of a temporary well to evaluate groundwater quality near a former septic waste discharge area. That well was installed and sampled in December 2022, and the results of the sampling are included in this report.

Although the bottom of the landfill is near the water table, there is evidence of minor impacts to groundwater but the impacts do not disqualify the use of a permeable cap. A slight landfill signature in groundwater is evidenced by low concentrations of ammonia and nitrate; however, a comparison of groundwater data to ecological screening benchmarks (ecotoxicity assessment) determined that concentrations are too low to adversely affect receptors (discussed in detail in Section 3.4). Elevated sodium

concentrations are present at well MW-5S downgradient of the landfill, but this appears to be related to ongoing salt storage operations at the landfill, not to the landfill itself. Pursuant to New Jersey Administrative Code 7:50-6.75(c)4, an impermeable cap is not required under these circumstances.

1. INTRODUCTION

This Hydrogeologic Investigation Report presents results of a hydrogeologic investigation at the former Manchester Township municipal landfill (the Site). This work has been conducted on behalf of NextGrid, Inc. (NextGrid) in support of plans to construct a solar power facility at the Site.

An initial hydrogeologic investigation was conducted by Maser Consulting, Inc. (Maser, now part of Collier's Engineering) on behalf of Manchester Township as documented in the October 2020 Site Hydrogeologic Investigation Report. The Pinelands Commission (PC) issued comments on the report in an October 29, 2020 letter. Maser subsequently responded in a November 12, 2020 letter.

In its comments, the PC identified several shortcomings in the initial hydrogeologic investigation performed by Maser. While Maser was able to address several of the PC's comments in its response, other PC comments identified data gaps that required additional field investigation activities, which were not performed by Maser prior to Geosyntec's involvement. Geosyntec proposed additional sampling to address these deficiencies in a 14 September 2021 letter to the PC, which was acknowledged by the PC later that day via email; the letter and response are provided in Appendix A.

The results of the additional hydrogeologic investigation were submitted to PC by Geosyntec in December 2021. Upon review of the report, PC required certain revisions to the report text and installation, and a revised report was submitted to PC in June 2022. PC then required the installation and sampling of a temporary well to evaluate groundwater quality near a former septic waste disposal area that was observed in historical documents, as reported by PC. This Final Hydrogeologic Investigation Report includes the results of the temporary well sample.

The Site features are shown in Figure 1-1. According to Maser (2020), the Site consists of approximately 99 acres, of which the landfill occupies slightly less than 30 acres. The landfill is no longer in use for waste disposal. Ongoing operations at the Site include a police firing range (located northwest of the landfill), municipal composting and recycling facilities, and a salt storage dome and other municipal equipment storage. The former septic waste disposal area was located where the police firing range is currently located.

The remainder of this report discusses the field and analytical methods, results, and conclusions of the hydrogeologic investigation.

2. FIELD INVESTIGATION PROCEDURES

2.1 Monitoring Well Installation

Four additional monitoring wells were installed to evaluate on-site groundwater flow conditions and the potential for landfill leachate impacts to groundwater and potential public health and ecological receptors. The well locations were selected based on correspondence with Mr. Ed Wengrowski of the PC and were selected based upon groundwater flow direction information reported to the PC in the 2020 Site Hydrogeological Investigation Report (Maser 2020, Figures 6 and 8). Importantly, the proposed locations of monitoring wells MW-5S and MW-5D were represented as being located upgradient of the landfill and the proposed locations of monitoring wells MW-6S and MW-6D were represented as being downgradient of the landfill, in areas with no fill. The original proposed locations of wells MW-5S and MW-5D were changed in the field due to accessibility issues. Mr. Wengrowski visited the Site during the first day of well installation and took no exception to the relocation of wells MW-5S and MW-5D based upon the representation that the field-adjusted locations of the wells were still located upgradient of the landfill and could be relied upon to characterize background water quality. In fact, these representations later proved to be inaccurate as the elevation data collected in 2021 demonstrated that wells MW-5S and MW-5D are downgradient of the landfill and wells MW-6S and MW-6D are side gradient of the landfill. These results are discussed further in Section 3.2.

Monitoring well installation activities were completed from September 27 to 30, 2021 by TPI Environmental, Inc. Prior to well installation activities, a geophysical survey was conducted by TPI on September 27, 2021 to verify that no underground utilities or subsurface structures were present in the proposed drilling locations.

Prior to drilling and well installation, direct push technology was used to log soils at the MW-5D location. Soil was brought to the surface for logging in 5-foot intervals, and photoionization detector (PID) readings were taken every six inches to the final boring depth of 45 feet below ground surface (bgs). The soil boring log is provided in Appendix B.

To construct the wells, 6-inch diameter hollow stem augers were advanced to the intended depths, 35 feet bgs for MW-5S and MW-6S, and 55 feet bgs for MW-5D and MW-6D. All four wells were constructed with 2-inch diameter, Schedule 40 PVC screen with 0.010-inch slot size and Schedule 40 PVC riser.

Well construction logs are provided in Appendix B. The wells were developed using a Grundfos pump to purge three well volumes and allowed to stabilize over a two-week period before sampling.

The locations and elevations of the new wells were surveyed by a New Jersey-licensed surveyor from DPK Consulting Land Surveyors. Surveyors Form Bs for the new wells are included in Appendix B. The elevations of wells MW-3 and MW-4 were resurveyed due to their use as reference points for the surveying of the new monitoring wells. There was no need to resurvey wells MW-1 and MW-2 at the time of the survey. It was later noted that the datum used for wells MW-1 and MW-2 pre-dates the current datum, and so a calculation was made to update these elevations to the current datum. Therefore, elevations at wells MW-1 and MW-2 are considered estimates.

2.2 Water Level Measurements

Groundwater elevations were collected on October 13, 2021 from the eight Site monitoring wells to identify the potentiometric surface and groundwater flow direction. Groundwater levels were measured using electronic water interface probes.

2.3 Groundwater Sample Collection and Analysis

Groundwater samples were collected from October 13 through October 15, 2021 using low-flow purge and sampling (LFPS) methods from the eight on-site monitoring wells.

For the sample collection, groundwater was purged at a rate less than 0.5 liter per minute (LPM) using a stainless-steel QED Sample Pro bladder pump fitted with dedicated high-density polyethylene (HDPE) tubing and a poly bladder in accordance with the NJDEP low-flow guidance for PFAS sampling (NJDEP 2021). Groundwater field parameters recorded from calibrated water quality meters during purging included temperature, pH, conductivity, dissolved oxygen, ORP, and turbidity. Upon stabilization of the groundwater field parameters, groundwater samples were collected directly from the tubing into laboratory-supplied bottle ware, placed on ice under proper chain-of-custody procedures, and submitted to the analytical laboratory (Alpha Analytical Laboratories [Alpha] of Westborough, Massachusetts, NJDEP Certification number MA935). Low-flow purging and sampling records (purge logs) from groundwater sampling events are included in Appendix C.

The groundwater samples were analyzed for 1,4-dioxane, Target Compound List (TCL) semi-volatile organic compounds (SVOCs), Target Analyte List (TAL) metals, and landfill leachate parameters. In addition, samples from the new wells (MW-5S, MW-5D, MW-6S, and MW-6D) perfluoroalkyl and polyfluoroalkyl substances (PFAS). Samples

from the existing wells (MW-1, MW-2, MW-3, and MW-4) were not analyzed for PFAS because these wells contained Teflon-lined tubing from previous sampling events. Teflon can contribute PFAS to groundwater samples and therefore any detections of PFAS in samples from these wells would not be valid. This was discussed with Mr. Wengrowski during sampling when the Teflon-lined tubing was first observed.

In addition, samples from wells MW-6S and MW-6D were sent to SGS AXYS Analytical Services Limited (AXYS) of Sidney, British Columbia for analysis of endocrine disruptor compounds (EDCs) including bisphenol A and analogs, and estrogen-like compounds. The analytic methods are AXYS' in house methods using liquid chromatography and mass spectrometry verification. Additional information on these methods is provided in AXYS' results report.

2.4 Surface Water Sampling

The proposed scope of work for this investigation included collection and analysis of four surface water samples. Two samples were proposed in a drainage ditch south of the landfill, and two samples were proposed in a wetland area north of the landfill. However, no surface water was present in these areas during the sampling event (October 13 through October 15, 2021). Therefore, no surface water samples were collected.

A second attempt to collect surface water samples was made on November 11, 2022. The entire Site was inspected, but no surface water was present. Therefore, no surface water samples were collected.

2.5 Installation and Sampling of a Temporary Well

PC required the installation and sampling of a temporary monitoring well to evaluate the potential impact of a former septic waste disposal area, which was located where the police firing range is currently located. The temporary well was installed and sampled on December 12, 2022. Its approximate location is shown on Figures 1-1 and 3-1. The location is northeast of the former septic waste disposal area. Based on the groundwater flow direction observed in nearby areas of the landfill (Figure 3-1), and the presence of wetlands further north, this location is expected to be downgradient of the former septic waste disposal area. The temporary well was installed by TPI. Prior to well installation activities, the top 5 feet of the borehole were advanced using a hand auger to reduce the risk to any underground pipes or wires. No underground pipes or wires were observed.

Below 5 feet, direct push technology was used to collect soil and create a 2-inch diameter borehole. Soil was brought to the surface for logging in 5-foot intervals, and PID readings

were taken every six inches to the final boring depth of 12 feet bgs. The soil boring log is provided in Appendix B.

The temporary well was constructed with 1-inch diameter PVC screen with 0.010-inch slot size and PVC riser. The screened interval was 2 to 12 feet bgs. No sand pack or other annular filling was used. The well construction is documented in the soil boring log in Appendix B.

Groundwater samples were collected after purging the temporary well with a peristaltic pump. The only exception to collection via a peristaltic pump was the sample for SVOCs which was collected using a Teflon-lined bailer following the collection of samples for all other analytes. The low-flow purging and sampling record (purge logs) is included in Appendix C. Samples included one parent sample and a duplicate. Geosyntec also prepared an equipment blank by pouring deionized water from the laboratory over the sampling equipment and collecting it in sample bottles. The groundwater samples were analyzed for 1,4-dioxane, TCL SVOCs, TAL metals, PFAS and landfill leachate parameters by Alpha.

After the groundwater samples were collected, the PVC screen and riser pipe were removed from the well, and the well was backfilled with soil cuttings. The ground surface was restored and any remaining soil cuttings were spread.

3. RESULTS

3.1 Soil

Appendix D contains a map showing the soil classifications at the Site. The area of the landfill is classified as Pits, Sand and Gravel (PHG). The remainder of the Site is classified as various sandy soils, including Atsion Sand (AtsAO), Lakehurst Sand (LakB), Lakewood Sand (LasB and LasC), and Woodmansie Sand (WobB). The PHG unit is not rated in regard to suitability for a sanitary landfill, and the other units are rated as "very limited". The depth to water according to the Web Soil Survey is greater than 200 cm in the PHG unit.

Based on the boring drilled at the location of well MW-5D and the temporary well boring (Appendix B), the soil at the Site consists of white and tan fine sand, coarse sand in some intervals, and little silt or clay. This is typical of the Cohansey Formation. Saturated conditions were observed at approximately 25 feet bgs (135 feet above mean sea level [amsl]) in the monitoring wells. Ground surface elevation at well MW-5D is 160 feet amsl. The depth to water at the temporary well was approximately 5.5 feet bgs. This location is in a relatively low area, closer to wetlands than the permanent wells, so a shallow depth to groundwater is expected. No volatile organic compounds (VOCs) were observed by the PID while advancing these borings.

The soil observations are generally consistent with those described previously (Maser 2020).

3.2 Leachate Modeling

Geosyntec prepared a hydrologic model using the USEPA Hydrologic Evaluation of Landfill Performance (HELP) program to evaluate the potential change in subsurface infiltration from the landfill comparing the current cap conditions and the proposed permeable cap closure. Geosyntec used the current HELP model (Version 4.0) for the various simulations.

The following assumptions were used for input parameters and proposed conditions and are included in Appendix E:

- The existing cover conditions included cover of primarily grassy vegetation, with some trees, with an average slope of 1.3 percent. However, based on the existing conditions, which indicate that the interior portion of the landfill does not runoff

to the landfill perimeter, the model was prepared with only 75 percent of the area subject to runoff. The cover soils comprise 6 inches of topsoil and 3.5 feet of sand underlain by an average thickness of 25 feet of municipal solid waste (MSW). The cover soils and waste thicknesses were selected based on results presented in the 2020 Site Hydrogeological Investigation Report (Maser 2020), which reported a minimum cover soil thickness of 4 feet across the landfill. A leaf area index of 3.5 was assigned for a good stand of grass and a 36-inch evaporation zone depth (the maximum recommended by the HELP program) to represent the combination of grassy vegetation and trees. Weather parameters were selected from historical data or synthetically generated within HELP.

- The post-closure scenario included cover of grassy vegetation with an average slope of 2 percent. The cover system will be graded to permit runoff from 100 percent of the landfill area. The cover soils comprise 6 inches of topsoil and 18 inches of sand underlain by an average thickness of 25 feet of MSW. A leaf area index of 2 for fair stand of grass and a 24-inch evaporation zone depth (i.e., the thickness of the proposed cover system). The same weather input parameters used to model the existing conditions were also used to model the post-closure scenario.

For the existing cover conditions, the estimated annual average runoff, evapotranspiration, and percolation through the waste layer as a percent of precipitation are 2.2 percent, 67.3 percent, and 30.4 percent, respectively. For the post-closure scenario, the estimated annual average runoff, evapotranspiration, and percolation through the waste layer as a percent of precipitation are 3.1 percent, 67.8 percent, and 28.9 percent, respectively. In terms of cubic feet of liquid percolating through the waste layer, the post-closure scenario represents a 4.8 percent reduction from the existing conditions.

3.3 Groundwater Elevations, Flow Directions, and Velocity

Depth to water measurements and groundwater elevations are shown in Table 3-1. A groundwater elevation contour map is provided in Figure 3-1. This figure shows the groundwater elevations in the shallow portion of the aquifer, represented by wells MW-1 through MW-4, MW-5S, and MW-6S. The elevations of the measuring points at wells MW-1 and MW-2 were corrected from the 1929 vertical datum (used when the wells were installed in 1985) to the current 1988 vertical datum. Therefore, groundwater elevations at wells MW-1 and MW-2 are approximate. As stated in Section 2.1, since wells MW-1 and MW-2 were not needed as reference points during the surveying of the

new monitoring wells, there was no foreseeable reason to resurvey them during the field event.

The depth to water was 22 to 27 feet below ground surface. Groundwater elevations in the shallow aquifer ranged from 134.60 to 137.83 feet above mean sea level. Appendix F contains cross-sections prepared by Maser (Maser 2020) that show the elevation of the water table below the landfill at approximately 137.5 feet above mean sea level, which is slightly higher than observed during this investigation. Based on the cross-sections, the bottom of the landfill waste is near or slightly below the water table.

Groundwater in the shallow aquifer flows outward from the landfill with a predominant northeast flow component. As shown on Figure 3-1, the groundwater elevation at well MW-3 (on or at the edge of the landfill) is higher than at well MW-5S (nearby MW-3 and off the landfill). Similarly, the groundwater elevation at well MW-4 (on or at the edge of the landfill) is higher than at well MW-6S (nearby MW-4 and off the landfill).

The groundwater flow pattern is similar to the topography: the landfill is generally flat but forms a shallow mound that is 10 feet, or in some areas 20 feet, higher than the surrounding undisturbed ground (see Figure 3 of Appendix A in Maser 2020). Flow is from the landfill outward toward the Old Hurricane Brook which is located east and north of the landfill.

The flow pattern shown on Figure 3-1 is not consistent with the previous data (Maser 2020) which showed shallow groundwater flowing primarily northwest to southeast, with MW-4 the most downgradient well. The differences could be due to the groundwater elevations from the new shallow wells MW-5S and MW-6S (which were not present during the 2020 investigation), or to temporal variations in groundwater flow. Since the flow pattern is different than expected, wells MW-5S and MW-5D serve as downgradient wells rather than upgradient wells as planned. Therefore, the quality of groundwater beneath and downgradient of the landfill cannot be compared to unimpacted upgradient groundwater. To mitigate the lack of an upgradient well and to identify potential impacts to nearby receptors, an ecotoxicity assessment was completed (Appendix G) and is discussed in Section 3.3.

The deeper portion of the aquifer is represented by wells MW-5D and MW-6D, both screened at 45 to 55 feet bgs. While groundwater elevations at two wells are not enough to understand horizontal groundwater flow direction, the flow direction in the deeper portion is likely similar to the shallow portion of the aquifer. At each well pair, there is

a slight downward gradient from the shallow to the deep well (MW-5S to MW-5D, and MW-6S to MW-6D). A downward gradient is typical of groundwater recharge areas.

The horizontal groundwater flow velocity in the shallow aquifer was estimated as shown in the following table.

	Monitoring Wells Used To Estimate Gradient	Change in Water Level (ft)	Distance (ft)	Hydraulic Gradient	Assumed K (ft/day)	Porosity	Flow Velocity (ft/day)
Lower End of Range	MW-1 and MW-5S	3.23	1,547	0.00209	84	0.437	0.40
Higher End of Range	MW-1 and MW-5S	3.23	1,547	0.00209	130	0.437	0.62

The hydraulic gradient was measured from well MW-1 to well MW-5S. The published hydraulic conductivity range of 84 to 130 ft/day for the Kirkwood-Cohansey aquifer (USGS 2008) and the effective porosity used in Layer 2 of the leachate modeling analysis (discussed in Section 3.2 and Appendix E) were used in this estimate. Layer 2 is sand and should be comparable to the Kirkwood-Cohansey aquifer. There is no published effective porosity value for the Kirkwood-Cohansey Formation currently available. The estimated flow velocity is 0.40 to 0.62 ft/day.

3.4 Analytical Results

The laboratory data reports are provided in Attachment A and the analytical results for the groundwater samples are shown in Table 3-2a through Table 3-2d. The tables compare the results to New Jersey Groundwater Quality Standards (GWQSs) for Class II-A groundwater. Groundwater at the Site is Class I-PL and therefore the Class II-A standards do not apply. However, comparison to these standards helps provide an indication of water quality. In the discussion below, data are discussed in terms of the Class I-PL non-degradation standard, and the Class II-A GWQSs. Additionally, the data were compared to relevant ecological screening benchmarks (ESBs) in an ecotoxicity assessment (Appendix G).

3.4.1 PFAS

PFAS results for wells MW-5S, MW-5D, MW-6S, MW-6D, and the temporary well are provided in Table 3-2a. Several PFAS compounds were observed in wells MW-5S and

MW-5D, including perfluorononanoic acid (PFNA), perfluorooctane sulfonate (PFOS), and perfluorooctonoic acid (PFOA). These PFAS have GWQS; the GWQS and results in wells MW-5S and MW-5D are summarized in the following table.

	GWQS	Well MW-5S	Well MW-5D
PFNA	0.013	0.00121J/0.00109J	ND
PFOS	0.013	0.00313/0.00276	0.000938J
PFOA	0.014	0.00323/0.00318	0.00393

All results in ug/L
Duplicate results are separated by a /
J – estimated
ND – not detected

In all cases, the PFAS results were less than their GWQS. No PFAS were detected at well MW-6S, and only one PFAS compound, PFOA, was detected at well MW-6D. This concentration was 0.00025 ug/L, well below the GWQS of 0.014 ug/L. Similarly, the only PFAS compound detected in the temporary well sample was PFOA, which was observed at estimated concentrations of 0.000292 ug/L and 0.000276 ug/L in the sample and duplicate. These values are well below the GWQS of 0.014 ug/L. An ecotoxicity assessment (Appendix G) compared the concentrations to ESBs and found that all concentrations were below ESBs.

In the absence of PFAS data from the wells that best represent groundwater beneath the landfill (MW-1 through MW-4) the potential contribution of landfilled materials on the PFAS results in the wells outside the landfill cannot be ascertained.

3.4.2 1,4-Dioxane

1,4-Dioxane results are summarized in Table 3-2b. No 1,4-dioxane was detected in groundwater.

3.4.3 TCL SVOCs

TCL SVOC results are provided in Table 3-2b. SVOCs were generally not detected, and where detected, were present at very low concentrations below their GWQS. The only well to contain SVOCs at a concentration above their GWQS is well MW-5S. The constituents at elevated concentrations were all polycyclic aromatic hydrocarbons (PAHs) which are typically associated with heavy oil products and asphalt. However, these constituents only appeared in one of the duplicate samples collected at well MW-5S, therefore, their presence is not confirmed. PAHs are low solubility compounds that do not migrate significantly in groundwater. Therefore, it is unlikely that they could migrate from the area of well MW-5S to the wetlands (Appendix G).

Previous sampling (Maser 2000) indicated that hexachlorobenzene was detected in wells MW-2 and MW-3. Hexachlorobenzene was not detected in any samples during this round of sampling, other than an estimated concentration of 0.1 ug/L in the temporary well, which is below the GWQS of 0.2 ug/L for this compound. The duplicate sample from this well did not contain hexachlorobenzene.

3.4.4 TAL Metals

TAL metals results are provided in Table 3-2c. Only a few metals were present at concentrations above their GWQS. These included aluminum, iron, manganese and sodium and their concentrations were generally only marginally above their GWQS.

Comparing the wells outside the landfill (MW-5S, MW-5D, MW-6S, and MW-6D) to those within or at the edge of the landfill (MW-1 though MW-4), the concentrations outside the landfill are similar to or less than those within the landfill. The exception to this pattern is the sodium results at wells MW-5S and MW-5D, which had the highest sodium concentrations. These wells are downgradient of the ongoing salt and equipment storage on the landfill, so the sodium is likely related to the salt storage. These data indicate that the ongoing activities on the landfill can impact groundwater.

An ecotoxicity assessment determined that iron is the only metal with a concentration in exceedance of an ESB. This concentration was detected at well MW-2 and does not extend beyond the landfill, as shown by the downgradient sample collected from well MW-5S which had a concentration below the ESB (Appendix G).

3.4.5 Leachate Parameters

The analytical results for leachate parameters are provided in Table 3-2c. The leachate parameters (under the heading General Chemistry in the table) are common constituents that are often associated with landfills and landfill leachate. The concentrations of all leachate parameters are below their GWQS.

Chloride was detected in most of the monitoring wells. The highest concentrations were in wells MW-5S and MW-5D. These wells are downgradient of the salt storage dome so the chloride likely originates there. A similar pattern is observed for sulfate and total dissolved solids (TDS).

Of particular interest as a landfill signature are ammonia and nitrogen. As noted above, the concentrations of these constituents are less than their GWQS. In addition, the ammonia and nitrate results were compared to the Pinelands Surface Water Quality Criteria of 2,000 ug/L for each constituent. An ecotoxicity assessment (Appendix G) also compared the concentrations to United States Environmental Protection Agency (2013) Aquatic Life Ambient Water Quality Criteria – Freshwater Chronic (1,900 ug/L total ammonia nitrogen). The groundwater concentrations are also below these criteria, and therefore would not be of ecological concern if they were to reach a surface water body. The concentrations of ammonia and nitrate in the wells outside the landfill are similar to or less than the concentrations in the wells within or at the edge of the landfill, and therefore show no evidence of landfill leachate migration away from the landfill.

3.4.6 EDCs

The analytical results for EDCs are provided in Table 3-2d. These constituents were measured in the samples from wells MW-6S and MW-6D. Groundwater or surface water criteria are not available for EDCs.

Bisphenol A was detected at 0.00255 ug/L at well MW-6S. Bisphenol S was detected at 0.00248 ug/L and at 0.00149 ug/L in well MW-6D. No other bisphenol compounds were detected. Detected concentrations of bisphenol A and bisphenol S are below the applicable ecological screening benchmark (Appendix G).

3.5 Potential Groundwater Receptors

An updated well search was conducted in April 2022 (Appendix H). There are numerous irrigation wells within one mile of the Site, and one public supply well in the Cedar Glen Lakes community to the southeast (side gradient) of the Site. A map of the wells used by

the Manchester Township Water Utility – Western Service Area (Western) is included in Appendix H. The Site, not shown on the map, is directly west (to the left) of the map extent. The map shows that the wells used for public water are located side-gradient of the Site, and therefore would not be impacted by groundwater from the Site. To be conservative, the periodic water quality data from Western were reviewed. The data show that there are no VOCs, nitrate, manganese, or sodium above the water quality standards (Appendix H). Iron was slightly above the recommended upper limit; however, this limit is not mandatory, and the concentrations were attributed to erosion of natural deposits in Western's water quality report. PAHs were not analyzed by Western, but due to the immobile nature of these compounds, they are not expected to migrate to any supply wells. According to the water quality report, the supply wells are all installed a minimum of 90 ft bgs, and the township controls the property around the wells and restricts any activity that could cause contamination. Additionally, the water is treated by Western prior to use.

As indicated on Figure 3-1, freshwater forested/shrub wetlands are present off-Site to the north and east (downgradient) of the landfill. An ecotoxicity assessment was completed using the data discussed in Section 3.4 to determine if there are potential impacts to nearby receptors (Appendix G). The results of this assessment showed that the low concentrations detected do not pose a risk to the nearby wetland ecosystem.

4. SUMMARY AND CONCLUSIONS

This work included installation of four new monitoring wells and a temporary well to better define groundwater flow and evaluate potential impacts to groundwater in areas near but outside the landfill. The results of the investigation indicate the following.

- The groundwater elevation data indicate that the water table is near the bottom of the landfilled material. Horizontal flow is generally away from the landfill toward nearby surface water bodies. The vertical gradient is downward.
- Although minor exceedances of select PAHs were identified in groundwater, these are not likely to pose risk due to the low magnitude and distance from surface water. No other concentrations exceeded ESBs, indicating that there is no risk to potential ecological receptors.
- Overall, the groundwater analytical data indicate limited impacts to groundwater beneath the landfill.
- There is no significant landfill leachate signature in the groundwater, as evidenced by the low concentrations of ammonia and nitrate, which are below their GWQS and below Pinelands Surface Water Criteria.
- Most constituent concentrations are less than their GWQS. In the few cases where concentrations are elevated, the concentrations are only marginally higher than their GWQS.
- There is some migration of constituents away from the landfill as evidenced by constituents observed in groundwater at well MW-5S. However, this area is downgradient of an active salt and equipment storage area, and the constituents in well MW-5S and MW-5D could be related to these ongoing activities. The high levels of sodium and chloride are consistent with migration from this area, so other constituents could migrate along the same pathway.
- The analytical results at the temporary well confirm no significant impacts to groundwater downgradient of the former septic waste disposal area, which was located in the current location of the police shooting range.

Based on these observations, groundwater is not significantly impacted by the landfill and no further hydrogeologic investigation is required.

TABLES

TABLE 3-1:
Groundwater Elevations
Manchester Landfill - 110 Sam Pitts Road
Manchester, New Jersey

Well	Elevation of Measuring Point	Depth to Water	Groundwater Elevation
MW1	164.38	26.55	137.83
MW2	166.27	29.21	137.06
MW3	160.43	24.40	136.03
MW4	164.95	28.68	136.27
MW5S	163.90	29.30	134.60
MW5D	164.43	30.39	134.04
MW6S	165.78	29.87	135.91
MW6D	165.83	30.01	135.82

Notes:

Elevations are in feet above mean sea level.

Depths to water are in feet.

Depth to water measurements were made on October 13, 2021.

Elevations of measuring points at wells MW1 and MW2 are based on original 1985 survey, corrected for NAVD 1988 vertical datum, and are considered estimates.

NJ-GWIIA: NJ - New Jersey Groundwater Quality Class IIA Criteria Criteria per Ground Water Quality Standards amended June 1, 2020.
Results in exceedance of the Groundwater Quality Criteria are highlighted blue.
J - Estimated concentration. Concentration is below the reporting limit but above the metho detection limit.
U - Not detected at the method detection limit
F - The ratio of quantifier ion response to qualifier ion response falls outside of the laborato criteria. Results are considered to be an estimated maximum concentration.
NA - Not Analyzed

Mr. Edward Wengrowski
Environmental Technologies Coordinator
The Pinelands Commission
PO Box 359
New Lisbon, New Jersey 08064

Subject: Plan for Hydrogeological Evaluation
Manchester Township Landfill
Manchester, New Jersey

Dear Mr. Wengrowski:

Geosyntec Consultants, Inc. (Geosyntec) is providing technical assistance to NextGrid, Inc. (NextGrid) with respect to the construction of a solar power facility on the Manchester Landfill. NextGrid desires to advance the hydrogeological evaluation of the landfill in support of their redevelopment plans.

An initial hydrogeologic investigation was conducted by Maser Consulting, Inc. (Maser) on behalf of Manchester Township and reviewed by the Pinelands Commission (PC). We have reviewed the following documents related to the investigation:

- Site Hydrogeologic Investigation Report by Maser, October 2020;
- Comment letter on the Maser report by the PC, October 29, 2020; and
- Response to PC comments by Maser, November 12, 2020.

The PC comments identified several shortcomings in the initial hydrogeologic investigation. Maser was able to address several of the PC's comments in its response, but other comments will require additional field investigation and submittal of the results to the PC to complete the investigation. Michael Lambert and John Persico of Geosyntec spoke with you on August 17, 2021 and on September 1, 2021 to get further clarification from you on the PC's requirements to complete the hydrogeologic investigation. This letter provides an outline of the investigation that NextGrid plans to conduct to satisfy the PC's concerns.

PROPOSED INVESTIGATION

Installation of Additional Monitoring Wells and Groundwater Sampling

In its Comment 4, the PC noted that proposed upgradient monitoring well MW-2 was located within the landfill, not in an upgradient position, and therefore could not be used to monitor natural groundwater conditions. The PC also noted (Comment 20) that groundwater monitoring would be required at potential ecological receptors (wetlands and surface waters) that might be impacted by landfill leachate. During our conversation on August 17, 2021, you indicated that deeper wells should be installed to monitor potential constituent flow paths in deeper groundwater. In response to these comments, NextGrid proposes to install two new monitoring well pairs as follows:

- Wells MW-5S and MW-5D will be installed northwest of the landfill to serve as upgradient wells monitoring background conditions; and
- Wells MW-6S and MW-6D will be installed southeast (downgradient) of the landfill to monitor potential leachate between the landfill and the downgradient wetlands.

The proposed well locations are shown in Figure 1. Prior to well installation, a visual survey of the site will be conducted to confirm these locations. If any significant change is required, the PC will be notified.

The wells will be installed by a New Jersey-licensed well driller. The wells will be constructed of 2-inch diameter PVC and will have 10-foot screens. Each shallow well (MW-5S and MW-6S) will be set approximately 8 feet below the water table. The deep wells (MW-5D and MW-6D) will be set approximately 20 feet deeper than the adjacent shallow well. After installation, the wells will be developed by pumping and surging until the discharge water is clear, or 10 well volumes, whichever is first.

After installation, the location and elevation of each new well will be surveyed by a New Jersey licensed surveyor, who will complete Form B location certifications for each well.

Groundwater samples will be collected from all eight (four existing and four proposed) monitoring wells. Prior to sampling, the depth to water will be measured at each well using an electronic water-level indicator. These data will be used to develop a groundwater elevation contour map.

Groundwater samples collected at the four existing monitoring wells within the landfill by Maser in 2020 were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, and polychlorinated biphenyls (PCBs), and for Target Analyte List (TAL) metals. Given their locations, these wells monitor the areas where

discharges from the landfill are most likely to be observed. Maser reported that VOCs, pesticides, and PCBs were absent; therefore, additional analyses of these constituents are not necessary. Certain SVOCs and metals were detected in the groundwater samples; therefore, the proposed samples will be analyzed for SVOCs and metals.

PC Comments 4 and 20 indicate that groundwater samples should be analyzed for landfill leachate parameters. Therefore, groundwater samples will be analyzed for the following constituents:

- Ammonia;
- Nitrate;
- Chloride;
- Sulfate;
- Total dissolved solids;
- Biological oxygen demand;
- Chemical oxygen demand; and
- Alkalinity.

In addition, the field parameters conductivity and pH will be measured using field instruments during sampling.

PC Comment 16 indicates that groundwater samples should be analyzed for per- and polyfluoroalkyl substances (PFAS) and endocrine disrupting compounds (EDCs). The New Jersey Department of Environmental Protection (NJDEP) recommends EPA modified Method 537 with a list of 12 PFAS compounds to be reported. NJDEP does not have a list of recommended EDCs to analyze. NextGrid proposes to analyze the following common EDCs:

- Estrogen-like compounds; and
- Bisphenol A.

These constituents will be analyzed in samples collected at proposed downgradient monitoring wells MW-6S and MW-6D. Also note that phthalates are considered EDCs and will be included in the SVOC analysis specified above.

Appropriate quality assurance samples will be obtained during sampling. All samples will be collected using procedures in the New Jersey Field Sampling Procedures Manual and will be analyzed by a New Jersey-certified laboratory (note that New Jersey does not certify laboratories for analysis of estrogen-like compounds or bisphenol-A in environmental samples).

Surface Water Sampling

PC Comment 20 indicates that surface water samples should be collected in potential ecological receptors and analyzed for landfill leachate constituents. Therefore, NextGrid proposes to collect surface water samples at four locations, including:

- two locations in the wetlands area northwest (upgradient) of the landfill; and
- two locations in the wetlands area southeast (downgradient) of the landfill.

The proposed surface water sampling locations are shown in Figure 1. Appropriate quality assurance samples will be obtained during sampling. All samples will be collected using procedures in the New Jersey Field Sampling Procedures Manual and will be analyzed by a New Jersey-certified laboratory. The samples will be analyzed for SVOCs, metals, landfill leachate parameters, and PFAS as discussed above.

Submittal of Technical Memorandum

When the analytical results are available, the results from the downgradient locations will be compared to the upgradient locations to evaluate whether landfill leachate may have impacted the downgradient locations. A technical memorandum will be prepared that summarizes the field procedures, groundwater flow, and analytical results. The technical memorandum will include figures that the PC requested in its comment letter, including geologic cross-sections and groundwater contours. If needed, the report will propose additional investigation tasks.

CONCLUSION

We believe that when completed, the proposed investigation will provide a complete basis for the hydrogeologic evaluation in support of the development of the landfill as a solar facility. If you believe any other investigatory work is needed, please identify that as soon as possible so we can move the project forward.

We currently have a driller scheduled to begin well installation on September 27, 2021. NextGrid plans to provide a technical memorandum with the results to you within 75 to 90 days after the wells are installed.

Please contact me at 609.903.6227 if you have any questions.

Sincerely,

John L. Persico, P.G.
Principal

Hello John,
Thank you for providing your scope of work letter dated Sept. 14, 2021 for Geosyntec's Manchester Landfill hydrological assessment.

I've summarized below the issues that we reviewed in our telephone conference held earlier today.

1. Confirmation that the shallow monitoring well screens will be set such that the top of screen is 2 feet above the water table surface and will extend 8 feet into the saturated zone.
2. Confirmation that sampling will include 1,5 Dioxane.
3. Confirmation that chemical parameters for which there is currently no NJDEP lab certification (e.g., EDC's Bisphenol A, phthalates (?)) will be performed using analytical methods that are in conformance with methods developed by USEPA, published in "Standard Methods for Water and Wastewater Analysis", developed by USGS, or are approved by equivalent authoritative sources.
4. Confirmation that surface water sample locations shown on Fig. 1 (Site Map with Proposed Sampling Locations, dated Aug. 2021) are proposed to be sampled if found to contain surface water on the sample collection date.
5. Revise Fig. 1 to include groundwater contours to clearly demonstrate that proposed MW-6D and MW-6 are down gradient and not side gradient of the landfill. Groundwater contours presented by Maser Consulting (see Fig 6 Water Table Contours Dec. 5, 2019 in Maser's Oct 2020 Report) suggest that these proposed wells may not be ideally situated to characterize groundwater downgradient of the landfill. You indicted that you would further evaluate the accuracy of the plotted ground water and adjust proposed well locations if and as necessary.
6. Cautioned that the Commission, by regulation (see N.J.A.C 7:50-6.75(c)2) will require that public health concerns related to potable wells down gradient of the landfill are evaluated.

Please reach out with any questions or concern.

Thank you.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

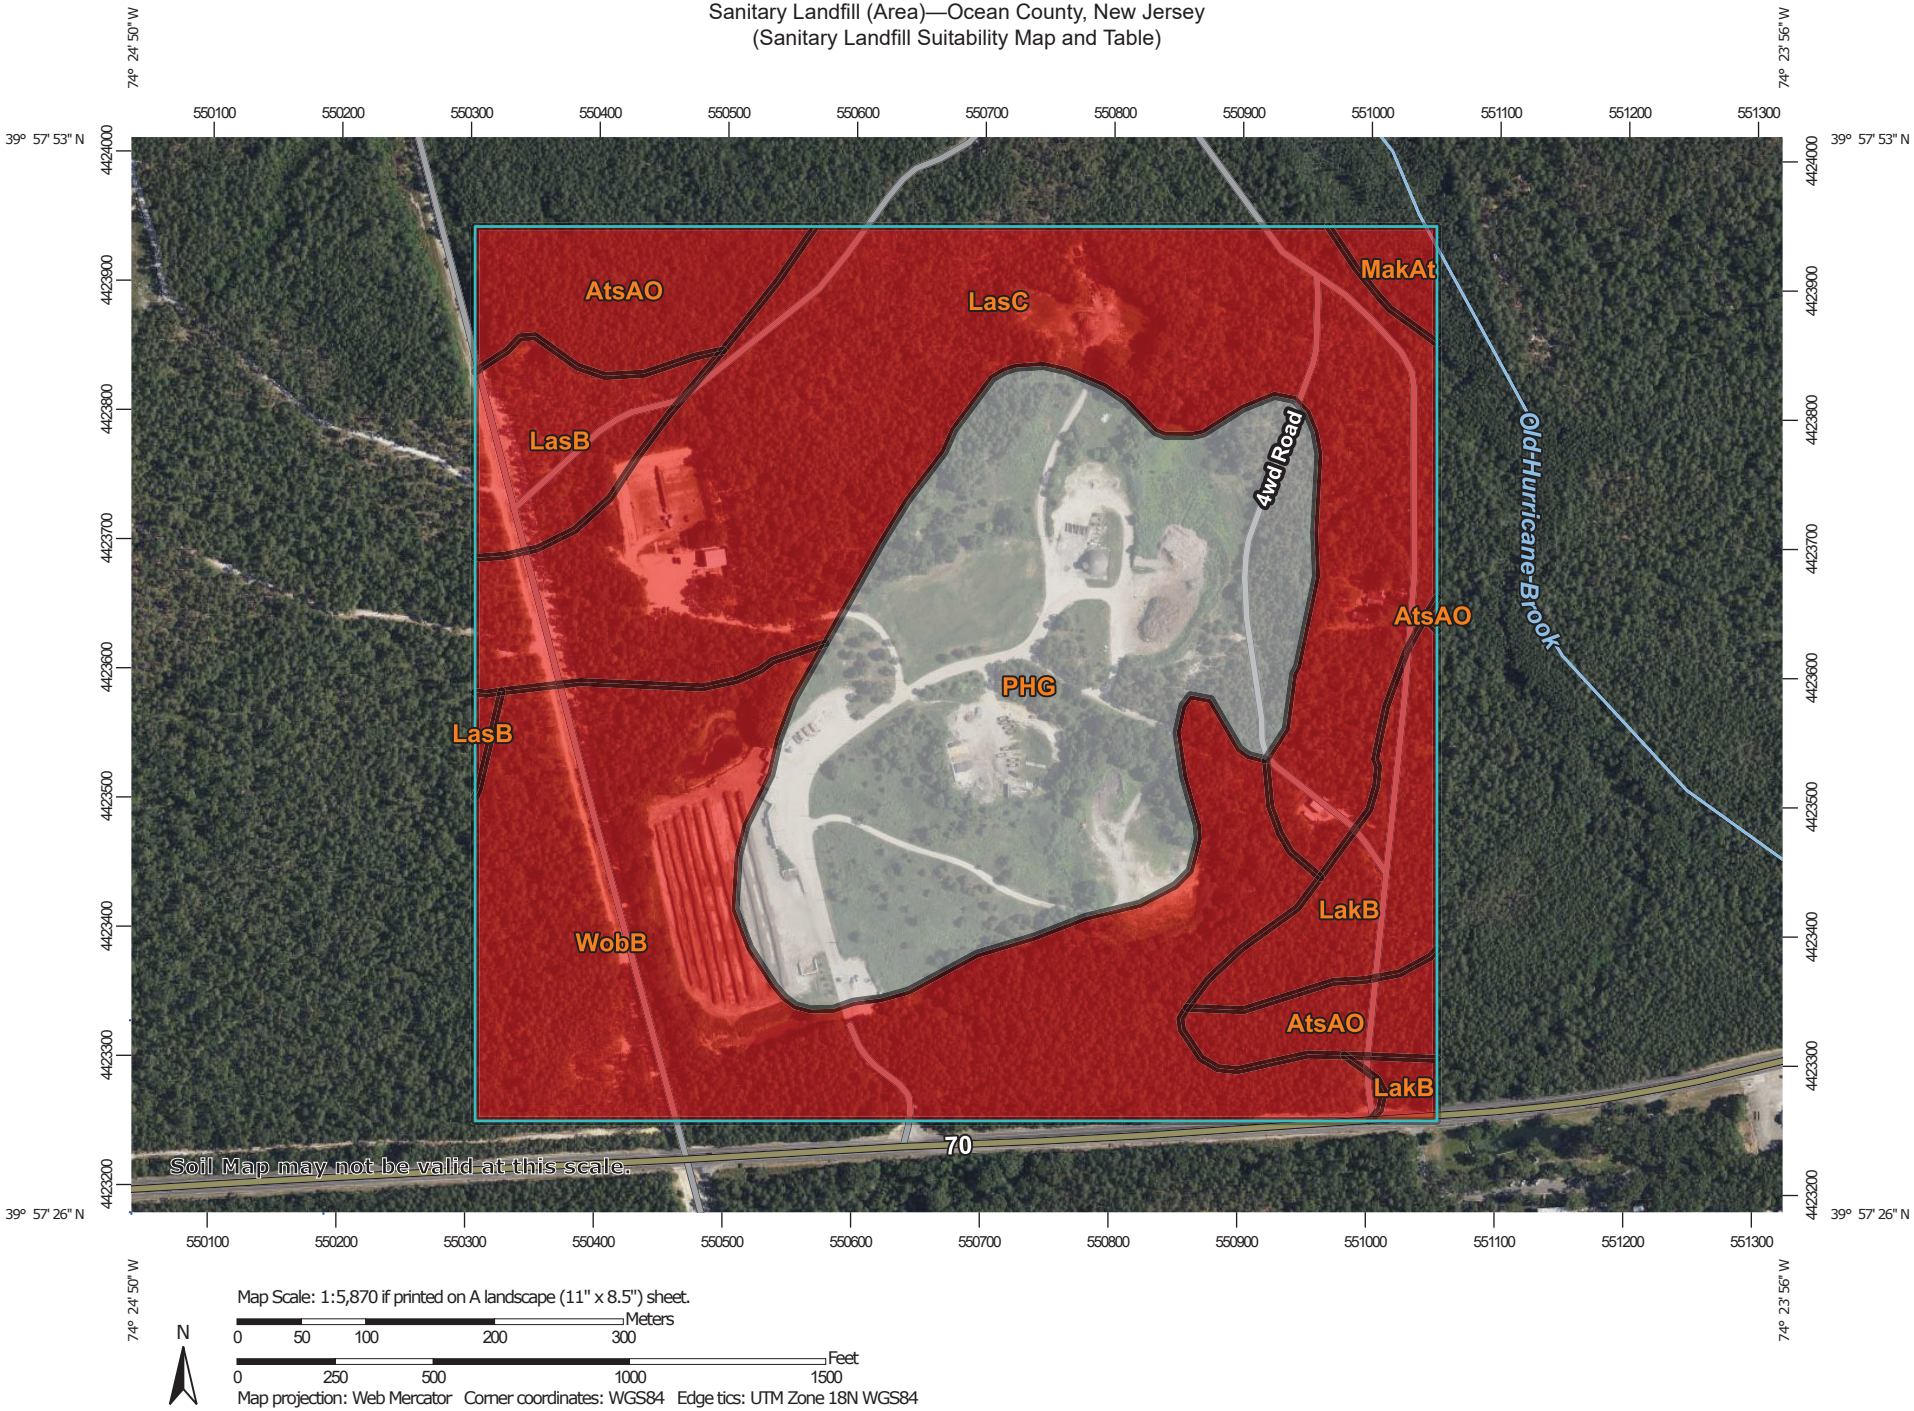
Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Ocean County, New Jersey
Survey Area Data: Version 19, Aug 31, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.



Date(s) aerial images were photographed: Apr 13, 2021—Sep 14, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI

Description

In an "area sanitary landfill," solid waste is placed in successive layers on the surface of the soil. The waste is spread, compacted, and covered daily with a thin layer of soil from a source away from the site. A final cover of soil material at least 2 feet thick is placed over the completed landfill. A landfill must be able to bear heavy vehicular traffic. It can result in the pollution of ground water. Ease of excavation and revegetation should be considered.

The ratings are based on the soil properties that affect trafficability and the risk of pollution. These properties include flooding, saturated hydraulic conductivity (Ksat), depth to a water table, ponding, slope, and depth to bedrock or a cemented pan. Flooding is a serious problem because it can result in pollution in areas downstream from the landfill. If Ksat is too rapid or if fractured bedrock, a fractured cemented pan, or the water table is close to the surface, the leachate can contaminate the water supply. Slope is a consideration because of the extra grading required to maintain roads in the steeper areas of the landfill. Also, leachate may flow along the surface of the soils in the steeper areas and cause difficult seepage problems.

The ratings are both verbal and numerical. Rating class terms indicate the extent to which the soils are limited by all of the soil features that affect the specified use. "Not limited" indicates that the soil has features that are very favorable for the specified use. Good performance and very low maintenance can be expected. "Somewhat limited" indicates that the soil has features that are moderately favorable for the specified use. The limitations can be overcome or minimized by special planning, design, or installation. Fair performance and moderate maintenance can be expected. "Very limited" indicates that the soil has one or more features that are unfavorable for the specified use. The limitations generally cannot be overcome without major soil reclamation, special design, or expensive installation procedures. Poor performance and high maintenance can be expected.

Numerical ratings indicate the severity of individual limitations. The ratings are shown as decimal fractions ranging from 0.01 to 1.00. They indicate gradations between the point at which a soil feature has the greatest negative impact on the use (1.00) and the point at which the soil feature is not a limitation (0.00).

The map unit components listed for each map unit in the accompanying Summary by Map Unit table in Web Soil Survey or the Aggregation Report in Soil Data Viewer are determined by the aggregation method chosen. An aggregated rating class is shown for each map unit. The components listed for each map unit are only those that have the same rating class as listed for the map unit. The percent composition of each component in a particular map unit is presented to help the user better understand the percentage of each map unit that has the rating presented.

Other components with different ratings may be present in each map unit. The ratings for all components, regardless of the map unit aggregated rating, can be viewed by generating the equivalent report from the Soil Reports tab in Web Soil Survey or from the Soil Data Mart site. Onsite investigation may be needed to

validate these interpretations and to confirm the identity of the soil on a given site.

Totals for Area of Interest			**128.4**	**100.0%**

Description

"Water table" refers to a saturated zone in the soil. It occurs during specified months. Estimates of the upper limit are based mainly on observations of the water table at selected sites and on evidence of a saturated zone, namely grayish colors (redoximorphic features) in the soil. A saturated zone that lasts for less than a month is not considered a water table.

This attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

Subject: Comparison of Groundwater Data to Ecological Screening Benchmarks
Manchester Landfill
Manchester, New Jersey

Credentials and Professional Judgement

I'm an environmental scientist with 15 years of professional experience in the consulting industry, with a focus on ecological risk assessment, ecotoxicity, site characterization and assessment, and evaluating the groundwater-surface water interface (porewater). My educational background includes a Bachelor of Science in Environmental Technology with a concentration in Environmental Toxicology (North Carolina State University 2007) and a Master of Environmental Assessment (North Carolina State University 2015). I've completed ecological risk assessments (screening-level and baseline) for numerous sites in United States Environmental Protection Agency (USEPA) Regions 1, 2, 3, 4, 5, 9, and 10, for both aquatic and terrestrial habitats. I've reviewed the groundwater data that has been screened against ecological benchmarks and have provided an assessment below. In my professional judgement, groundwater does not pose a risk to aquatic ecological receptors downgradient of the site and no further action is warranted.

Data Evaluation

Risk to ecological receptors can be assessed by comparing concentrations of chemicals in media (soil, sediment, etc.) against ecological screening benchmarks (ESBs). ESBs are concentrations below which no adverse effects on ecological receptors (e.g., fish, aquatic invertebrates, amphibians and wildlife) are expected. ESBs are intentionally conservative and protective of all receptors exposed to that media; in some cases, ESBs may be below naturally occurring levels. If concentrations of constituents in the media are below ESBs, it can be concluded no further evaluation is warranted.

There are different sources for ESBs, and the preference for which source to use can vary by state and USEPA region. The hierarchy is to use state-based ESBs and then USEPA regional (if available) or federal. If ESBs are not available from the state or USEPA region, then other sources are considered

(such as using ESBs from other USEPA regions or trusted database sources like the Risk Assessment Information System).

ESBs are a general term to describe screening levels for ecological receptors. However, different states, regions, or sources may use other language to describe ESBs. For example, other common terminology used can include screening criteria, screening levels, thresholds, or screening values. For the purposes of this memo, terminology is used based on the source of the ESB.

Data from the groundwater sampling event in October 2021 and the temporary well sample collected in December 2022 were compared to publicly available risk-based ESBs to assess whether constituents detected in groundwater may pose a hazard to downgradient ecological receptors. Ecological receptors do not come into direct contact with groundwater; however, they may be exposed if shallow groundwater discharges into nearby and downgradient surface water. Therefore, using groundwater as a surrogate for an ecological risk screening is a conservative approach.

The groundwater samples were analyzed for Target Compound List semi-volatile organic compounds (SVOCs) including 1,4-dioxane, Target Analyte List metals, and landfill leachate parameters. Samples from MW5S, MW5D, MW6S, MW6D, and the temporary well were also analyzed for perfluoroalkyl and polyfluoroalkyl substances (PFAS). Samples from wells MW6S and MW6D were analyzed for endocrine disruptor compounds (EDCs). Surface water samples were planned to be collected in the wetland area north of the site in October 2021 and in November 2022 but could not be collected as no surface water was present. The SVOC and metal screen is presented in Table 1, PFAS screen is presented in Table 2, and EDC screen is presented in Table 3[1].

For some analytical results where constituents were not detected in a sample (non-detects) the method detection limit may be higher than the selected ESB. This is because ESBs are extremely conservative and laboratory methods often cannot detect concentrations at or below the ESB. The laboratory that conducted the analyses is certified by the State of New Jersey and the analytical methods used in this study are USEPA methods (where applicable), so the analytical results are as precise as current methods and equipment permit. In cases where the detection limit is higher than the ESB, it is general practice to accept the non-detect result as confirming that the constituent is not present at a concentration that would result in ecological risk.

The preferred ESBs used in this evaluation were the New Jersey Ecological Screening Criteria (ESC) surface water quality standards freshwater chronic criteria. If no ESC was available, then the following sources were used to identify relevant and appropriate ESBs:

- USEPA Region 4 Ecological Screening Values (ESVs) freshwater chronic criteria were used if an ESC was not available. The Region 4 ESVs were published in 2018 and are commonly used in different USEPA regions.
- Los Alamos National Laboratory (LANL) freshwater criteria for protection of aquatic community organisms was used for aluminum (LANL, 2017). LANL provides no effect concentration (NOEC) based criteria and a low effect concentration (LOEC) based criteria. While NOECs are conservative like other ESBs and are protective for individual organisms, LOECs are commonly

[1] These tables only include detected constituents. The full analytical results are included in the Final Hydrogeologic Investigation Report.

used in the refinement step of ecological risk screening and provide a risk-based number that is protective of a population level for receptors.

- USEPA National Recommended Water Quality Criteria (NRWQC) for aquatic life was used for iron.
- Pinelands Water Quality Standard and USEPA (2013) Aquatic Life Ambient Water Quality Criteria (AWQC) freshwater chronic ESBs were used for ammonia and nitrate.
- Environmental Science Division Argonne National Laboratory's ESV for aquatic life were used for PFAS. Argonne National Laboratory developed ESVs to support screening-level ecological risk assessments at federal Department of Defense facilities (U.S. Air Force, Navy, Army, and other U.S. Department of Defense sites where PFAS have been detected in soils and surface waters).
- The Risk Assessment Information System (RAIS) database (Oak Ridge National Laboratory, 2022) was used to identify available ESBs for EDCs. RAIS identified only one available ESB from federal Canadian guidelines (Environment and Climate Change Canada, 2021).

Selected alternate ESBs support the screening level steps (Steps 1 and 2 of eight steps) of USEPA Ecological Risk Assessment Guidance for Superfund to assess whether levels pose potential unacceptable ecological risks. Thus, groundwater concentrations that exceed ESBs may require further investigation in a baseline ecological risk assessment, which in turn may support risk-management decisions and actions to reduce risks.

Results

For detected SVOCs, groundwater concentrations were all below the ESC except for benzo(a)anthracene and benzo(a)pyrene in the samples collected from MW5S and the temporary well. A duplicate sample was collected at MW5S and neither benzo(a)anthracene and benzo(a)pyrene were detected. At the temporary well, the equipment blank collected for quality assurance contained benzo(a)anthracene and benzo(a)pyrene, at levels higher than observed in the samples from the well (the equipment blank results are in Table 3-2b of the Final Hydrogeologic Investigation Report). This indicates that these compounds are not present in groundwater but are the result of contamination during sample collection or analysis. Benzo(a)anthracene and benzo(a)pyrene were not detected in samples collected from any other monitoring wells.

The SVOCs benzo(k)fluoranthene, caprolactam, dibenzo(a,h)anthracene, and hexachlorobenzene were detected in groundwater samples but do not have New Jersey ESCs. USEPA Region 4 ESVs were used as an alternate ESB for benzo(k)fluoranthene and dibenzo(a,h)anthracene, which have a screening value of 0.012 µg/L. In the samples collected from wells MW1 and MW5S, concentrations of these two PAHs exceed the ESV. USEPA Region 4 ESVs were also used for hexachlorobenzene, which has an aquatic screening value of 0.15 µg/L. The concentration of hexachlorobenzene in groundwater is below this ESC. While ESBs are not available for caprolactam, caprolactam concentrations were compared to the New Jersey groundwater screening criteria as a conservative screening and were below the criteria. Well MW5S is located more than 700 feet upgradient from the nearest wetlands (see Figure 3-1 in the Hydrogeologic Investigation Report). PAHs are low solubility compounds that do not migrate significantly in groundwater. It is unlikely that they could migrate from the area of well MW5S to the wetlands.

Metals were not detected at concentrations that exceed ESCs. Calcium, magnesium, potassium, and sodium were detected but do not have ESCs; these are essential macronutrients and therefore are not evaluated in ecological risk assessments. Additionally, well MW5S is located downgradient of a salt and equipment storage area. Based on the presence of high levels of sodium and chloride, groundwater impacts at well MW5S are likely related to ongoing operations at the salt and equipment storage area.

Aluminum was detected in all groundwater samples. An ESC is not available for aluminum, as aluminum is only bioavailable to organisms with pH of less than 6.5 and greater than 9. pH measured during groundwater purging ranged between 3.3 and 5.1, which is a range that could result in bioavailability. However, screening groundwater data is a conservative approach and does not represent surface water conditions that aquatic organisms would be exposed to. Additional sources were reviewed for ESBs; LANL provides a NOEC of 530 µg/L and a LOEC of 1,300 µg/L. The most downgradient wells at the Site are well MW5S and the temporary well. Aluminum concentrations from well MW5S and the temporary well are below these LANL NOECs, so no effect from the aluminum on ecological receptors would be expected.

Iron also does not have an ESC, but ESBs are available from other sources. NRWQC provides a chronic ESB of 1,000 µg/L. Only the groundwater sample collected from well MW2 contains a concentration of iron above this ESB, and the most downgradient well (MW5S) had a concentration of iron well below the ESB.

Ammonia and nitrate concentrations were compared to the Pinelands Water Quality Standard for nitrate-N (2,000 microgram per liter [ug/L] for each constituent) as well as the USEPA AWQC (2013) (1,900 ug/L total ammonia nitrogen). Concentrations were below the USEPA and Pinelands Water Quality Standards. This indicates that ammonia and nitrate are not present at levels at which adverse ecological effects would occur.

There are currently no New Jersey ESCs available for PFAS; therefore, PFAS results were compared to the Environmental Science Division Argonne National Laboratory's ESV for aquatic life. The detected PFAS results were compared to the ESVs (Table 2), and all detected concentrations were below ESVs.

Similarly, there are currently no available New Jersey ESCs for EDCs. Alternate ESBs were identified using the RAIS database (Oak Ridge National Laboratory, 2022). The only available ESB is from federal Canadian guidelines (Environment and Climate Change Canada, 2021), and only available for bisphenol A (BPA). The ESB for BPA was used as a surrogate for bisphenol S, as no ESB is available. Detected concentrations of both are below the ESB.

Conclusions

Although minor exceedances of select PAHs compared to ESBs were identified in groundwater, these are not likely to pose risk due to the low magnitude and distance from surface water. The most downgradient monitoring well, MW5S, is located approximately 700 ft upgradient of the wetland. Concentrations of all constituents are expected to decrease along the flow path towards the wetland. Based on this evaluation, the groundwater concentrations do not pose a threat to any ecological receptors and no further investigation to evaluate risk to downgradient ecological receptors is warranted.

Annual Drinking Water Quality Report

2021 (2020 Data)

Manchester Township Water Utility—Western Service Area

PWSID# NJ1518004

MANCHESTER TOWNSHIP
OCEAN COUNTY, NEW JERSEY

Manchester Township Water Utility's goal is to provide you with water that meets or surpasses all the standards for safe drinking water. The Western Service Area (NJ1518004) delivers water to the Whiting section of the Township lying southeast of Manchester Boulevard, northwest of Lake Road and along Station Road. Water is also sold to the Lacey Road water system (NJ1518011).

These health and safety standards are set by the United States Environmental Protection Agency (EPA) and the New Jersey Department of Environmental Protection (NJDEP). We're at work 24 hours a day, 365 days a year to provide you and your family with top quality water. We regularly test water samples to be sure that your water meets the safety standards. All the test results are on file with the NJDEP, the agency that monitors and regulates drinking water quality in our state. Both the EPA and the NJDEP require water suppliers to send a Consumer Confidence Report (CCR) to customers on an annual basis.

This CCR provides important information about your drinking water. It shows how your drinking water measured up to government standards during 2019. Please read it carefully and feel free to call the Manchester Township Water Utility at 732-657-8121 or the EPA Safe Drinking Water Hotline at 800.426.4791 with any questions. If you have specific questions about water as it relates to your personal health we suggest that you contact your health care provider.

Where does your water come from?

Manchester Township Water Utility-Western, herein after "Western" obtains our water from seven active wells drilled between 90 and 1225 feet into two underground sources of water called the Cohansey and the Potomac-Raritan-Magothy (PRM) Aquifers. The Township controls the property around these wells and restricts any activity that could contaminate them. All of our water is treated at one of five treatment facilities located at or near the wells.

The treatment facilities include treatment for iron removal, corrosion control, and disinfection.

To comply with state and federal regulations, Manchester Township Water Utility-Western issues an annual Consumer Confidence Report describing the quality of the drinking water supplied to Lacey Road customers.

If you have any questions about the drinking water that Western supplies, please call 732-657-8121. The water quality report for Western can be found at **http://www.manchestertwp.com/departments/public-works-and-utilities/**

Contact Information

Please contact Manchester Township Water Utility at 732-657-8121 regarding the content of this report. We encourage public participation at our regular meeting which is held every second and fourth Monday of each month at 6:00pm. Meetings are located at the Municipal Building, 1 Colonial Drive, Manchester, NJ.

Lead Notice

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Manchester Water Utility is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water is available from the Safe Drinking Water Hotline or at

http://www.epa.gov/safewater/lead.

People with Special Health Concerns

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemo-therapy, persons who have undergone organ transplants, people with HIV / AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA / CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Waived Requirements

The Safe Drinking Water Act regulations allow monitoring waivers to reduce or eliminate the monitoring requirements for asbestos, volatile organic chemicals, and synthetic organic chemicals. Our system has been granted a waiver for synthetic organic chemicals.

MANCHESTER TOWNSHIP
OCEAN COUNTY, NEW JERSEY

How do drinking water sources become polluted?

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the **EPA's Safe Drinking Water Hotline (800-426-4791)**.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

Source Water Assessments

The NJDEP has completed and issued the Source Water Assessment Report and Summary for this public water system, which is available at **http://www.state.nj.us/dep/swap** or by contacting the NJDEP's Bureau of Safe Drinking Water at **609-292-5550**.

The source water assessment table for Western is provided below. The table provides the number of wells that have either a high (H), medium (M), or low (L) susceptibility rating for each of eight contaminant categories.

If a water system is rated highly susceptible for a contaminant category, it does not mean a customer is or will be consuming contaminated drinking water. The rating reflects the potential for contamination of source water, not the existence of contamination. Public water systems are required to monitor for regulated contaminants and to install treatment if any contaminants are detected at frequencies and concentrations above allowable levels. As a result of the assessments, the DEP may change existing monitoring schedules based upon susceptibility ratings.

Pathogens: Disease-causing organisms such as bacteria and viruses. Common sources are animal and human fecal wastes.

Nutrients: Compounds, minerals and elements (both naturally occurring and man-made) that aid plant growth. Examples include nitrogen and phosphorus.

Pesticides: Man-made chemicals used to control pests, weeds and fungus. Common sources include land application and manufacturing of pesticides. Examples include herbicides such as atrazine, and insecticides such as chlorodane.

Radionuclides: Radioactive substances that are both naturally occurring and man-made. Examples include radium and uranium.

Volatile Organic Compounds: Man-made chemicals used as solvents, degreasers, and gasoline components. Examples include benzene, methyl tertiary butyl ether (MTBE), and vinyl chloride.

Inorganics: Mineral-based compounds that are both naturally occurring and man-made. Examples include arsenic, asbestos, copper, lead, and nitrate.

Radon: Colorless, odorless, cancer-causing gas that occurs naturally in the environment. For more information go to http://www.nj.gov/dep/rpp/radon/index.htm or call 800-648-0394.

Disinfection Byproduct Precursors: A common source is naturally occurring organic matter in surface water. Dis-infection byproducts are formed when the disinfectants used to kill pathogens (usually chlorine) react with dissolved organic material (leaves, etc.) in surface water.

2020 Water Quality Results					
Radioactive Contaminants	**MCLG**	**MCL**	**Level Detected**	**Violation**	**Likely Source**
Combined Radium - 228 & 226 Test Results Year 2020	0 pCi/L	5 pCi/L	Range: 1.1-3.8 Highest: 3.8	N	Erosion of natural deposits
Radium-226 Test Results Year 2020	0 pCi/L	5 pCi/L	Range: 0-1.58 Highest: 1.58 LRAA	N	Erosion of natural deposits
Radium-228 Test Results Year 2020	0 pCi/L	5 pCi/L	Range: 1.1-2.2 Highest: 2.2	N	Erosion of natural deposits
Gross Alpha Emitters Test Results Year 2020	0 pCi/L	15 pCi/L	Range: 3.6-11.5 Highest: 11.5	N	Erosion of natural deposits
Inorganic Chemicals	**MCLG**	**MCL**	**Level Detected**	**Violation**	**Likely Source**
Nickel Test Results Year 2020	10 ppm	10 ppm	Range: ND-0.0022 Highest: 0.0022	N	Runoff from fertilizer, leaching from septic tanks, sewage, and erosion of natural deposits
Nitrate (as Nitrogen) Test Results Year 2020	10 ppm	10 ppm	Range: ND-1.32 Highest: 1.32	N	Corrosion of household plumbing systems and erosion of natural deposits
Fluoride Test Results Year 2020	4 ppm	4 ppm	Range: ND Highest: ND	N	Erosion of natural deposits
Copper & Lead	**MCLG**	**AL**	**Level Detected**	**Violation**	**Likely Source**
Copper Test Results Year 2018	1.3 ppm	1.3 ppm	90th Percentile: 0 Samples > AL: 0	N	Corrosion of household plumbing systems and erosion of natural deposits
Lead Test Results Year 2018	0 ppb	15 ppb	90th Percentile: 4 Samples > AL: 1	N	Corrosion of household plumbing systems and erosion of natural deposits
Regulated Disinfectants	**MRDLG**	**MRDL**	**Level Detected**	**Violation**	**Likely Source**
Chlorine Test Results Year 2020	4.0 ppm	4.0 ppm	Range: 0.6-1.0 Average: 0.92	**Y**	Treatment process
Volatile Organic Compounds / Disinfection By-products	**MCLG**	**MCL**	**Level Detected**	**Violation**	**Likely Source**
HAA5 Haloaecetic Acids Test Results Year 2020	n/a	60 ppb	Range: ND-1.1 Highest: 0.275 LRAA	N	Byproduct of drinking water disinfection
TTHM Total Trihalomethanes Test Results Year 2020	n/a	80 ppb	Range: 1-13 Highest: 8.225 LRAA	N	Byproduct of drinking water disinfection
Methyl Tertiary-Butyl Ether (MTBE) Test Results Year 2020	70 ppb	70 ppb	Range: 0-3 Highest: 3	N	Byproduct of drinking water disinfection
Secondary Contaminants		**RUL**	**Level Found**	**Violation**	**Likely Source**
Iron [+] Test Results Year 2020		0.3 ppm	Range: ND-0.824 Highest: 0.824	Y*	Erosion of natural deposits
Manganese Test Results Year 2020		0.05 ppm	Range: ND-0.02 Highest: 0.02	N	Erosion of natural deposits
Chloride Test Results Year 2020		250 ppm	Range: ND-35 Highest: 35	N	Erosion of natural deposits
Sodium Test Results Year 2020		50 ppm	Range: 4.68-17.7 Highest: 17.7	N	Naturally present in the environment
pH Test Results Year 2020		6.5-8.5 Units	Range: 7.48-8.95 Highest: 8.95	N	Naturally present in the environment
Sulfate Test Results Year 2020		250 ppm	Range: ND-9.85 Highest: 9.85	N	Erosion from natural deposits; Industrial wastes
Hardness, Carbonate Test Results Year 2020		250 ppm	Range: 46.4-63.1 Highest: 63.1	N	Naturally present in the environment
Total Dissolved Solids (TDS) Test Results Year 2020		500 ppm	Range: 110-146 Highest: 146	N	Erosion from natural deposits

2020 Water Quality Results

Secondary Contaminants	RUL	Level Found	Violation	Likely Source
Aluminum Test Year 2020	0.2 ppm	Range: ND-0.31 Highest: 0.31	N	Erosion of natural deposits
Color Test Results Year 2020	10 CU	Range: ND Highest: ND	N	Naturally present in the environment

[+] The recommended upper limit for iron is based on unpleasant taste of the water and staining of laundry. Iron is an essential nutrient, but some people who drink water with iron levels well above the recommended upper limit could develop deposits of iron in a number of organs of the body.

[++] The recommended upper limit for manganese is based on staining of laundry. manganese is an essential nutrient, and toxicity is not expected from high levels which would not be encountered in drinking water.

* Note on Recommended Upper Limit Exceedances: Secondary standards are non-mandatory guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. These contaminants are not considered to present a risk to human health.

Microbiologicals-Revised Total Coliform Rule (RTCR)	Number Required	Number Completed	Corrective Actions Required	Corrective Actions Completed
Level 1 Assessment - Total Coliform	0	0	0	0

Total coliform bacteria are generally not harmful themselves. Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other potentially harmful bacteria may be present.

Unregulated Substances for which the EPA requires monitoring	Reference Concentration	Level Detected	Violation	
Bromide Test Results Year 2018	N/A	Range: ND-36 ppb Highest: 36 ppb	N	
HAA6Br Test Results Year 2018	N/A	Range: 0.361-0.825 ppb Highest: 0.825 ppb	N	
HAA9 Test Results Year 2018	N/A	Range: 0.654-1.348 ppb Highest: 1.348 ppb	N	
Chlorate Test Results Year 2014	210 ppb	Range: 27-1700 Highest: 1700	N	
Chlorodifluoromethane Test Results Year 2014	N/A	Range: ND-110 ppb Highest: 110 ppb	N	
Chromium Test Results Year 2014	100 ppb	Range: ND-0.35 Highest: 0.35	N	
Cobalt Test Results Year 2014	70 ppb	Range: ND-1.7 Highest: 1.7	N	
Hexavalent Cromium (dissolved) Test Results Year 2014	N/A	Range: 0.054-0.16 ppb Highest: 0.16 ppb	N	
Strontium Test Results Year 2014	1500 ppb	Range: ND-560 Highest: 560	N	
Vanadium Test Results Year 2014	21 ppb	Range: ND-0.28 Highest: 0.28	N	

Unregulated contaminants are those for which the EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist the EPA and DEP in determining the occurrence of unregulated contaminants in drinking water and whether regulation is warranted.

Additional information about unregulated contaminants can be found at the following link, courtesy of the EPA: https://www.epa.gov/sites/production/files/ 2015-10/documents/ucmr3_factsheet_general.pdf and https://www.epa.gov/sites/production/files/2017-03/documents/ucmr4-fact-sheet-general.pdf

Definitions

ppm **Parts Per Million**: equivalent of one second in 12 days

ppb **Parts Per Billion**: equivalent of one second in 32 years

ppt **Parts Per Trillion:** equivalent of one second in 32,000 years

NA **Not Applicable**

RUL **Recommended Upper Limit**

ND **Not Detected**

RAA **Running Annual Average**

LRAA **Locational Running Annual Average**

TT **Treatment Technique**: A required process intended to reduce the level of a contaminant in drinking water.

MCL **Maximum Contaminant Level**: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

MCLG **Maximum Contaminant Level Goal**: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

AL **Action Level** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

CU **Color Unit**

pCi/L **Picocuries Per Liter**: equivalent of one second in 32 million years

MRDL **Maximum Residual Disinfection Level** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG **Maximum Residual Disinfection Level Goal** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLG's do not reflect the benefit of the use of disinfectants to control microbial contamination.

Primary Standards: Federal drinking water regulations for substances that are health-related. Water suppliers must meet all primary drinking water standards.

Secondary Standards: Federal drinking water measurements for substances that do not have an impact on health. These reflect aesthetic qualities such as taste, odor and appearance. Secondary standards are recommenda-

SECTION 00 31 19
EXISTING CONDITIONS

PART 1 GENERAL

1.01 SUMMARY

A. The Manchester Township Landfill (Site) is an existing unlined municipal landfill facility located at 110 Sam Pitts Road in Manchester Township, New Jersey.

B. The Site is owned by the Manchester Township (Township) and portions of the Site are leased to NextGrid Manchester, LLC, Inc. (DEVELOPER) for redevelopment as a solar energy system.

C. CONTRACTOR is the firm retained by the DEVELOPER to construct the prescribed design in accordance with the Construction Documents. CONTRACTOR may retain the services of specialty subcontractors and suppliers.

D. CQA Consultant is a party, independent from the Township, DEVELOPER, and CONTRACTOR or its construction subcontractors and is responsible for observing and documenting activities related to the performance of the various components of the design, as described in the Construction Quality Assurance Plan.

E. The CONTRACTOR's access to the Site shall be limited to the areas indicated on the Drawings or as otherwise approved in writing by the Developer.

1.02 SITE CONDITIONS

A. The Site is bounded on the north, east, and west by forest and to the south by a John Davison Rockefeller Memorial Highway (also referred to as New Jersey State Route 70 or SR-70). The Site may be accessed at a single location from SR-70. CONTRACTOR shall coordinate with the DEVELOPER to establish an access and egress point, temporary haul routes, and laydown areas.

B. Wetland areas have been delineated on the Site as shown on the Drawings. Disturbance of the wetland areas shall not be permitted. Wetland areas shall be protected by the CONTRACTOR. Any damage to wetland areas caused by CONTRACTOR shall be restored to the satisfaction of the CQA CONSULTANT and at no cost to the Township or DEVELOPER. Any monetary or other penalties which are a result of CONTRACTOR's Work shall be the sole responsibility of the CONTRACTOR.

C. Environmental monitoring wells are located throughout the Site, including within the limits of disturbance for the Work. These monitoring wells shall not be disturbed except as described in the Construction Documents. Any damage to environmental monitoring wells caused by CONTRACTOR shall be restored to the satisfaction of the Township, DEVELOPER, and the New Jersey Department of Environmental Protection (NJDEP) at no cost to the Township or DEVELOPER. CONTRACTOR shall organize the Work

in a manner that allows continuous access to all environmental monitoring wells.

D. The Township maintains a shooting range to the north of the Site, which will remain in operation throughout the Work. CONTRACTOR shall coordinate safe access to the shooting range throughout the Work. Further CONTRACTOR shall not access or otherwise disturb the areas near the shooting range without prior approval from the DEVELOPER.

E. The Township currently uses portions of the Site as a yard waste composting operation and multiple compost and yard waste stockpiles are present. The compost will be relocated off-Site prior to or immediately upon the start of Work.

F. The Township currently uses a portion of the Site as a publicly accessible recycling area. The CONTRACTOR shall remove and reinstall the recycling area as part of the Work as shown on the Drawings.

G. Overhead power lines are present onsite. The power lines are to be removed and/or relocated during the Work as shown on the Drawings.

H. The asphalt pavement at the Site entrance shall be protected and serve as the tie-in point for the subgrade and final cover system, as shown on the Drawings. Asphalt pavement around the existing salt shed structure shall be removed and transported off-site as described on the drawings. Asphalt shall not be reused for any reason as part of the landfill closure.

I. Additional site features are shown and shall be managed as noted on the Drawings or as directed by the DEVELOPER.

1.03 HOURS OF CONSTRUCTION

A. CONTRACTOR shall perform the Work Monday through Friday during daylight hours.

B. Work is not permitted on Saturdays, Sundays, or legal holidays unless prior written authorization is obtained from the Township and the DEVELOPER.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01 32 23
SURVEY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. CONTRACTOR shall comply with the requirements of this Section regarding field surveying.

B. CONTRACTOR shall employ a licensed Surveyor to provide field survey control and prepare as-built Record Drawings of CONTRACTOR's construction activities.

C. CONTRACTOR shall be responsible for coordination of all as-built surveying. Should as-built surveying data not meet the requirements of this Section, CONTRACTOR shall be solely responsible for all delays and costs associated with uncovering completed Work in order to obtain necessary as-built data.

D. CONTRACTOR's Surveyor will work with the CQA CONSULTANT to ensure that the Work is completed as required by the Construction Documents.

1.02 SURVEYOR QUALIFICATIONS

A. CONTRACTOR's Surveyor shall meet the following minimum qualifications:

1. Surveyor is a registered professional surveyor in the State of New Jersey;
2. Surveyor has an established office in New Jersey that provides land surveying services;
3. Surveyor can document prior experience on at least one previous project requiring earthwork as-built surveying; and
4. Surveyor is acceptable to the CQA CONSULTANT and DEVELOPER.

1.03 SUBMITTALS

A. At least fourteen (14) days prior to the Preconstruction Meeting, CONTRACTOR shall submit to the CQA CONSULTANT the name, contact information, and qualifications of the Surveyor.

B. Upon request, CONTRACTOR shall submit to the CQA CONSULTANT the project staffing, scheduling, and the type of equipment the Surveyor intends to use in the field and in the office (i.e., computer software) to complete the Work.

C. On request, CONTRACTOR shall submit to the CQA CONSULTANT, documentation verifying accuracy of survey work.

1.04 PROJECT RECORD DRAWINGS

A. CONTRACTOR or Surveyor shall maintain a complete and accurate log of control and survey work as the Work progresses.

B. CONTRACTOR shall keep and update as-built drawings of all work consistent with the requirements of Part 1.07.E of this Section. CONTRACTOR shall allow the CQA CONSULTANT to routinely inspect the interim record drawings. At the end of the Work, CONTRACTOR shall submit a complete set of Record Drawings and the Surveyor's log of control and survey work to the CQA CONSULTANT for its use in preparing the final report of construction activities.

1.05 EXAMINATION

A. CONTRACTOR or Surveyor shall verify locations of survey control points prior to starting Work.

B. CONTRACTOR shall promptly notify DEVELOPER or CQA CONSULTANT of any discrepancies discovered.

1.06 SURVEY REFERENCE POINTS

A. CONTRACTOR shall protect existing survey control and reference points.

B. CONTRACTOR shall protect survey control monuments during construction.

C. CONTRACTOR shall promptly report to DEVELOPER and CQA CONSULTANT the loss or disturbance of any monument or relocation required because of changes in grades or other reasons.

D. CONTRACTOR's Surveyor shall replace disturbed monuments based on original survey control. Changes shall not be made without prior written notice to DEVELOPER and CQA CONSULTANT.

1.07 SURVEY REQUIREMENTS

A. CONTRACTOR or Surveyor shall provide field survey services to perform the Work using accepted engineering survey practices.

B. Surveyor shall provide all materials required to establish and maintain benchmarks, control points, grade stakes, and other necessary items.

C. All topographic surveying shall have a horizontal scale of 1 in = 50 ft with 1-ft contour intervals. Elevations shall be taken at a maximum 50-ft grid to confirm as-built grades.

D. Survey of the Work shall extend to at least 25 ft beyond the limits of the applicable work area.

E. To prepare Record Drawings, the Surveyor shall establish the as-built elevations, lines, and levels for the features of the Work including, but not limited to:

1. Topography of work area prior to commencement of Work.
2. Topography of the work area following vegetation clearing and removal of stored materials and equipment indicated on the Drawings.
3. Topography of the prepared subgrade prior to placement of the final cover system. As-built survey information should be collected within 7 days of establishing design subgrade in a given area to confirm grades have been achieved as designed but before significant effects of waste settlement have occurred.
4. Limits and topography of the top of Cover Soil.
5. Limits and topography of the top of Topsoil in areas of the vegetated final cover system.
6. Limits and topography of the top of Coarse Aggregate in areas of the aggregate final cover system.
7. Limits and topography of the final grades of the stormwater management basins.
8. Location, invert, and pipe sizes of stormwater system components, including manholes, vaults, and pipes. Gravity piping shall be measured for slope at maximum 25-ft intervals along the pipe
9. As-built location and, as appropriate, elevation of closure system features, including but not limited to retaining walls, asphalt-paved areas, gas vents, stormwater channels, stormwater infiltration features, downchutes, riprap energy dissipation pads, etc.
10. Dimensions and surface elevations of the Access Road.

1.08 SURVEY FOR QUANTITY ESTIMATES

A. CONTRACTOR is responsible to obtain and submit all survey documentation it s, including electronic computer-aided drafting (CAD) files, required for verification of quantities. DEVELOPER or CQA CONSULTANT may verify measurements and quantities.

B. Should DEVELOPER or CQA CONSULTANT determine that insufficient survey data has been submitted to accurately verify quantities, DEVELOPER or CQA CONSULTANT shall notify CONTRACTOR of deficiencies. CONTRACTOR shall address identified deficiencies prior to further review of quantities.

C. If survey data provided by CONTRACTOR is not sufficient to determine actual completed quantity and the status of the Work prevents additional data from being obtained, DEVELOPER or CQA CONSULTANT shall attempt to reasonably estimate the completed quantity based on available information and DEVELOPER or CQA CONSULTANT's estimate shall be final.

D. DEVELOPER shall have the right to retain a third-party surveyor licensed in the State of New Jersey to review field survey data and/or resurvey portions of the Work to check as-built quantity estimates. In the case of conflict between the two surveys, the CQA CONSULTANT shall review the two surveys and determine the final pay quantity.

E. Surveys for interim payments may be performed by means other than use of a licensed surveyor, as agreed between CONTRACTOR and DEVELOPER. Surveys for final payment shall be performed by a licensed surveyor as described in this Section.

1.09 TOLERANCES

A. All constructed products shall meet the following survey tolerances:

1. Length, thickness, or distance: ±0.1 ft
2. Length, thickness, or distance with a specified minimum: 0 to +0.2 ft
3. Vertical elevation: ±0.1 ft
4. Slope angles: ± 5 percent of specified slope (e.g. 3H:1V = 33.3 percent ±1.7 percent)
5. Slope angles with a specified minimum: 0 to + 10 percent of specified slope
6. Horizontal coordinates: ±0.1 ft

PART 2 PRODUCTS

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01 35 29.13
HEALTH AND SAFETY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. This Manchester Township Landfill (Site) is an existing unlined municipal landfill facility. This Section specifies the minimum health and safety submission and Work requirements for the Site. The remedial action (RA) Contractor shall develop and implement an overall site-specific Health and Safety Plan (HASP). The HASP shall address all activities performed within the Construction Documents.

B. The HASP shall address all applicable requirements under Occupational Safety and Health Administration (OSHA) 29 Code of Federal Regulation (CFR) 1910.120 and/or 1926.65. The HASP shall be written to avoid misinterpretation, ambiguity, and mistakes that verbal orders cause.

C. The HASP shall be prepared and implemented by qualified personnel employed by the Contractor and shall address all excavation, demolition, earthwork, backfilling, waste handling, water management, and all other relevant general construction hazards and other Work-specific hazards. The Contractor's HASP shall also address employee hazard control procedures for waste, and stormwater, and leachate handling and management.

D. The Contractor shall assume responsibility for the means and methods of jobsite safety, including general safety oversight authority for the health, safety, and protection of the Contractor and subcontractor, on-site personnel, agency representatives, visitors, and the public during the performance of the Work. The Contractor is responsible for providing facilities, labor, materials, tools, equipment, appliances, transportation, and supervision necessary to complete the Work specified in this Specification and in the Construction Documents in a safe, diligent, and compliant manner.

1.02 RELATED SECTIONS, PLANS, AND DOCUMENTS

A. All Sections of these Specifications and the Construction Documents

1.03 REFERENCES

A. The following codes and standards shall be used to conduct the Work referenced in this Specification. The latest version of all codes and standards apply.

1. Federal OSHA Standards
    a. OSHA 1910.95 – Occupational Noise Exposure

b. *General Industry Standards and Interpretations*. Volumes 1 to 3. OSHA 2017. U.S. Department of Labor, OSHA. Specifically Sections 29 CFR 1910.1000-1050 (air contaminants), 1910.120 (Hazardous Waste Operations and Emergency Response), 1910.137 (Electrical Protection), Part 1910 Subpart L (Fire Protection), 1910.1200 (Hazard Communication), 1910.301 Subpart S (Electrical), 1910.146 (Permit Required Confined Space), 1910.147 (Control of Hazardous Energy (Lockout/Tagout), Part 1904 (Recordkeeping and Reporting Occupational Injuries and Illnesses), Part 1990 (Identification, Classification and Regulation of Potential Occupational Carcinogens), and Part 1926 (Safety and Health Regulations for Construction)

c. *Hazardous Waste Inspections Reference Manual.* U.S. Department of Labor. OSHA. 1986

d. *OSHA Field Operations Manual*. 2nd Edition. U.S. Department of Labor. OSHA. 1987

1.04 HEALTH AND SAFETY REQUIREMENTS

A. The Contractor shall always be solely responsible for exercising reasonable precaution to protect the health, safety, and welfare, of Site workers, on-site personnel, visitors, trespassers, and the environment during performance of the Work described herein and shown on the Drawings. The Contractor shall comply with all applicable provisions of federal, state, and local health and safety and occupational health and safety statutes and codes.

B. The Contractor shall also comply with conditions contained in site-specific regulations, permits, or licenses and shall make every effort to comply with requests from the Developer.

1. The Contractor shall be responsible for full compliance with the regulations established under the federal Occupational Safety and Health Act of 1970, including agreements with the U.S. Department of Labor and the State of New Jersey and any applicable amendments or revisions thereof, whether associated with the furnishing of equipment and or systems, the installation of equipment and/or systems, the construction of facilities, the performance of services, or any other similar contractual relation.
2. The Contractor shall be responsible for any violations of the regulations, including payment of costs involved with correction of violations, hearing or appeal procedures, and claims or fines associated with said violations at no additional cost to Owner.
3. The Contractor shall comply with applicable requirements of labor laws and regulations of the State of New Jersey applicable to safety and the authorities having jurisdiction over same.

4. The Contractor shall maintain adequate protection against damage to life and property involved in the Work and shall provide all necessary, protective devices until completion and final acceptance of the project by Owner's Representative.

C. In any emergency threatening life or property, not considered by Contractor as coming under the preceding provisions, the Contractor may act at its own discretion without authorization by the Developer. In the case of such an event, the Contractor shall notify the Developer as soon as possible.

D. The Contractor shall be responsible for all notifications to utility companies or other parties regarding any intrusive Site work in compliance with OSHA 29 CFR 1926 Subpart P and all applicable local and state requirements.

E. The Contractor shall use qualified personnel acceptable to the Developer to develop, implement, administer, and supervise a site-specific HASP and associated procedures in accordance with these Specifications.

F. The Contractor's qualified personnel shall be responsible for developing a site-specific HASP consistent with the requirements described herein and specifying the Contractor's policies and procedures to adequately protect Site workers, on-site personnel, agency representatives, visitors, and trespassers. The Contractor shall review the available chemical and analytical data, the specified scope of work, and the Site conditions in the development of the HASP. The HASP shall be written in compliance with applicable sections of OSHA 29 CFR Parts 1926 and 1910. The HASP must establish in detail the protocols necessary for protecting workers, agency representatives, on-site personnel, visitors, and trespassers from potential physical and chemical hazards encountered during the Work. The HASP must include routes to the nearest hospital or emergency health facility. A hard copy of the HASP must be maintained at all project Work areas. The Contractor shall maintain records demonstrating that each worker has reviewed the HASP on an annual basis.

G. The Contractor shall be required to conduct the Work in a manner that prevents odors and fugitive dust that might affect public health or result in nuisance conditions. The Contractor shall provide and have immediately available in adequate amounts equipment, processes, or materials accepted by the Developer to mitigate reasonably foreseeable air or odor conditions commensurate with the type of remediation work being conducted at the time.

H. The opinions of the Developer regarding expected Site conditions do not relieve the Contractor of its responsibility to protect the health and safety of its employees, all subcontractor employees, the public welfare, and the environment. In the event the Contractor discovers unknown, unforeseen, sudden, or potentially hazardous conditions or environmental conditions inconsistent with known existing conditions, the Contractor shall notify the Developer immediately. Verbal notification of any environmental releases, injuries, near misses, or OSHA-reportable events shall be provided to the Developer immediately following the incident. At that time, Site actions may include a

safety stand-down or safety work stoppage depending on the severity of the event, which shall be followed by a written description of the conditions and actions taken to mitigate the situation. The written description shall be submitted to the Developer within 24 hours of the discovery. The Contractor shall cooperate with any follow-up investigations conducted by the Developer of a reportable condition or other incident.

1.05 SUBMITTALS

A. The Contractor shall submit the following to the Developer's Representative:

1. Site-specific HASP. The HASP shall include policies and procedures for working 12 months a year (including winter months) and 24 hours per day. At a minimum, the HASP shall include the following:
    a. Names and contact information of key personnel and alternate responsible for Site health and safety (responsibilities and chain of command)
    b. Specific provisions for stopping work and reevaluating safety procedures and equipment in the event an unanticipated Work scope is required
    c. Safety data sheets (SDSs) for products to be used at the Site
    d. Task-specific Job Safety Analysis (JSA) for each component for the Work anticipated for the project.
    e. Requirements for training in accordance with applicable federal, state, and local regulations for each work task and a record or schedule for training of the Contractor’s and subcontractors’ workers in the use of personal protective equipment (PPE)
    f. Corrective actions to be completed for dust and odor issues
    g. Logs, reports, and recordkeeping
    h. Emergency procedures for occurrences such as personal injury, fire, and exposure to toxic substances
    i. Emergency contact information
    j. Documentation of 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training and applicable 8-hour annual HAZWOPER refresher training and other applicable training (e.g., supervisory, confined space entry) for personnel

1.06 RESPONSIBILITIES OF CONTRACTOR AND ADDITIONAL SUBCONTRACTORS

A. The minimum precautions noted in this Specification shall in no way relieve the Contractor from the responsibility to implement stricter health and safety precautions as warranted by the Work.

B. Overall responsibility for implementation of the HASP shall be the responsibility of the Contractor. The Contractor shall conduct an initial survey to determine the appropriate

safety procedures and level of worker safety equipment, shall prepare the HASP, and shall oversee the activities of the SSHOs.

C. The Contractor shall also be responsible for signing visitors onto the Site and providing them with information regarding the day's activities and related safety issues. The Contractor shall maintain a daily visitor's log, record the name and affiliation of each visitor, and document the safety orientation.

D. The Contractor shall also be responsible for implementing the HASP by all other subcontractors.

E. The Contractor shall provide all necessary health and safety equipment, including PPE, respiratory equipment (if applicable), and monitoring instruments.

F. The Contractor shall be responsible for determining the appropriate level of personal protection required based on the criteria outlined in the Contractor's HASP. Work shall be suspended whenever the Contractor personnel are not equipped with a sufficient level of PPE for the hazards encountered. In the event the Contractor determines that a level of protection higher than Level D is required, the Contractor shall immediately or preemptively notify the Developer, and the Contractor's personnel shall take the necessary steps outlined in the HASP.

G. It shall be the Contractor's responsibility to notify the Developer verbally and in writing as quickly as possible should any unforeseen safety hazard or condition become evident during the performance of the Work. In the interim, the Contractor shall take prudent action to establish and maintain safe working conditions and to safeguard workers, on-site personnel, visitors, trespassers, and the environment in accordance with the established emergency response procedures detailed in the Contractor's HASP.

1.07 STOP WORK AUTHORITY

A. Should any unforeseen safety-related factor, hazard, or condition that poses a potential threat of physical injury or harm to Site personnel or the environment becomes evident during the performance of the Work, all Site personnel shall have authority as granted by OSHA regulations to issue a Stop Work directive. In addition, the Developer shall also have authority to issue a Stop Work directive upon observation of a safety-related factor, hazard, or condition of potential injury or harm to the environment.

If a Stop Work directive is issued, the Contractor shall immediately take prudent corrective actions to secure the Work and provide safe conditions for Site personnel and the environment. This corrective action shall be followed by an immediate verbal notification to the Developer. The written incident report shall be provided as soon as possible but, at a minimum, by 10:00 a.m. local time the day following the incident. The Contractor shall investigate and provide a written report incorporating the results of the investigation if directed by the Developer. The Developer's Representative may prohibit the restart of Site operations pending receipt and acceptance of any directed reporting.

B. The Contractor shall not charge standby time during Stop Work directives initiated by the Developer in response to the Contractor's near miss, unsafe action, or reportable safety incident.

C. Should the Contractor refuse to obey a Stop Work directive, the Developer may immediate excuse the Contractor from the Site.

PART 2 PRODUCTS

2.01 MATERIALS

A. The Contractor and all subcontractors shall provide on-site personnel with the appropriate PPE when required by the Contractor's HASP and shall ensure that all PPE is kept clean and well maintained.

B. The minimum PPE to be worn in general work areas includes hard hats, hard-toed work boots (steel or composite), reflective high visibility upper body garment, eye protection (ANSI Z878), and standard work clothes.

C. All health and safety materials and equipment shall conform, at a minimum, to OSHA, NIOSH, and American National Standards Institute (ANSI), and ASTM International standards and requirements.

D. Clothing and Equipment: Generally, protective clothing is considered disposable, but respiratory equipment may be reusable. Clothing and equipment corresponding to the various levels of personal protection as defined in the referenced standards include the following:

1. Level D Protection
    a. Coveralls (cotton) or work clothes
    b. Hard-toed work boots/shoes
    c. Eye protection (ANSI Z87)
    d. Hard hat with optional face shield
    e. Reflective high-visibility upper body garment
2. Modified Level D Protection
    a. Long-sleeved jacket (rain suit) and Tyvek® coveralls, poly-coated Tyvek coveralls, or chemical protective overalls
    b. Gloves, outer (neoprene, polyvinyl chloride [PVC] flocked nitrile, butyl or Viton™)
    c. Boots with chemical protective toe and shank (neoprene or nitrile) or boots with chemical protective boot covers (e.g., disposable PVC)
    d. Eye protection (ANSI Z87)

e. Hard hat with optional face shield
f. Reflective high-visibility upper body garment

3. Level C Protection
   a. Long-sleeved jacket (rain suit) and Tyvek coveralls, poly-coated Tyvek coveralls, or chemical protective overalls
   b. Gloves, inner (disposable surgical type)
   c. Gloves, outer (neoprene, PVC flocked nitrile, Viton or Butyl)
   d. Boots with chemical protective toe and shank (neoprene or nitrile); or boots with chemical protective boot covers (e.g., disposable PVC)
   e. Full facepiece, air-purifying respirator (MSA Ultra Twin or equal)
   f. Hard hat
   g. Face shield (optional)

E. The Contractor shall notify the Developer in advance of deploying Level C PPE on the Site because public or regulatory notifications of upgrades may be necessary.

F. The Contractor shall supply any additional PPE or safety equipment for the period of construction as required by Contractor's HASP or OSHA.

PART 3 EXECUTION

3.01 IMPLEMENTATION AND GENERAL REQUIREMENTS

A. The Contractor shall take measures to protect all on-site personnel from exposure to Site contaminants, hazardous wastes as defined by the United States Environmental Protection Agency, hazardous materials as defined by the New Jersey Department of Transportation, and/or hazardous substances as defined by OSHA, which may originate from or be present at the Site.

B. The Contractor shall take measures to ensure that all construction activities are conducted in a safe manner, including specific procedures for working in the vicinity of heavy equipment, underground and overhead utilities, Site clearing and tree removal, excavation, work in the vicinity of the radio tower and grounding grid, and all in-water operations.

C. The Contractor shall establish and maintain work zones (i.e., support, contamination reduction, and exclusion zones) at the Site in accordance with OSHA 29 CFR 1910.120/1926.65.

D. The Contractor shall maintain all required forms and OSHA records at the Site.

E. The Contractor shall provide all required personnel decontamination equipment and materials in accordance with OSHA 29 CFR 1910.120/1926.65.

F. The Contractor shall dispose of all PPE used by the Contractor's employees, subcontractors, Engineer, Owner, Owner's Representative, agency representatives, and/or any other visitors in accordance with all applicable regulations.

G. The HASP shall be implemented by the Contractor and subcontractors under the direction of the Contractor. It is the Contractor's responsibility to ensure all on-site personnel comply with the HASP. Modifications to the Contractor's HASP shall be made by the CIH/CSP after consultation with the Owner's Representative.

H. The Owner's Representative may conduct quality assurance inspections and will have access to all the Contractor's project-specific health and safety records.

I. The levels of protection are established in the referenced standards. It is anticipated that most Work will require Level D or Modified Level D PPE. Upgrading the level of protection shall be the sole responsibility of the Contractor. The Contractor shall notify the Owner's Representative immediately of the need to upgrade levels of PPE.

3.02 EMERGENCY AND CONTINGENCY PLANNING

A. The Contractor's HASP shall include emergency procedures for occurrences such as personal injury, fire, and exposure to toxic substances. The SSHO shall instruct all personnel, including subcontractor personnel, on the Site during the daily safety briefings concerning these safety procedures.

B. Emergency response procedures shall include employee training, alarm systems, escape routes and procedures, critical operations or equipment, rescue and medical duty assignments, designation of responsible parties, emergency reporting procedures, and methods to account for all employees after evacuation.

C. Emergency contact information shall be included in the Contractor's HASP and shall be posted by the Contractor in accessible areas near the Work.

D. If on-site Work results in the accidental spill or release of oil or hazardous materials, containment to the extent possible by on-site personnel (in proper PPE, as designated by the SSHO) shall be required of the Contractor. Containment shall include using absorbent pads or materials; diking with soil; and covering and/or diverting spills from sewers, drains, and surface water bodies. For any spill that cannot be controlled by on-site personnel or is above the applicable reportable quantities, the SSHO or designee shall secure the area and notify the necessary personnel, including the Owner's Representative, other relevant state environmental personnel, and a designated hazardous materials cleanup subcontractor trained in compliance with the emergency response training requirements of OSHA 29 CFR 1926.65 and 1910.120. All Contractor personnel who perform activities involving a response to a release of hazardous substances shall be trained in compliance with the emergency response training requirements of OSHA 29 CFR 1926.65 and 1910.120.

E. Should any unforeseen hazardous condition that may affect the completion of this Work become evident, the Contractor shall immediately bring the condition to the attention of the Developer, both verbally and in writing. Resolution of the matter shall come through the Developer. In the interim, the Contractor shall take prudent action to establish and maintain safe working conditions and to safeguard all Site personnel, the public, and the environment.

3.03 LOGS, REPORTS, AND RECORDKEEPING

A. The Contractor shall maintain daily logs and reports covering the implementation of the HASP, including the air and noise monitoring program and daily safety meetings. The format shall be developed by the Contractor to include daily logs and weekly reports. The Contractor shall provide the Developer with copies of all logs and reports as requested.

B. The Contractor shall daily provide the Developer with minutes of safety meetings, including topics discussed and attendance sheets.

C. The Contractor shall be solely responsible for compliance with all federal laws (such as OSHA 29 CFR 1926.33/1910.1020) that require chemical exposure records and medical records to be maintained by the employer for a specified length of time after termination of the job.

END OF SECTION

SECTION 01 43 00
CONSTRUCTION QUALITY ASSURANCE

PART 1 GENERAL

1.01 SUMMARY

A. DEVELOPER may retain a Construction Quality Assurance (CQA) Consultant who shall be responsible for quality assurance testing and monitoring of the Work. The CQA Consultant shall perform the quality assurance testing and construction monitoring in accordance with the Construction Documents (CQA Plan, Specifications, and Drawings).

B. CQA testing procedures and frequencies for individual products, materials, and procedures are described in the CQA Plan and in the Specifications.

C. For this Project, CQA refers to means and actions employed by DEVELOPER or CQA Consultant and testing laboratories to assure that the components of the design are produced and installed to conform to the requirements of the Drawings and Specifications.

D. When requested by the DEVELOPER or CQA Consultant, CONTRACTOR shall provide equipment and labor required to support CQA monitoring, testing, and sampling.

E. CONTRACTOR shall be familiar with the contents of the CQA Plan. CONTRACTOR shall take the quality assurance testing frequencies and procedures into account when planning the construction schedule. CONTRACTOR shall not claim delay of the Work because of quality assurance testing.

1.02 DEFINITIONS

A. CQA is a planned and systematic pattern of the means and actions designed to provide adequate confidence that items or services meet contractual and regulatory requirements and will perform satisfactorily in service.

B. For this Project, CQA refers to means and actions employed by ENGINEER or CQA Consultant and testing laboratories to provide DEVELOPER with confidence that the components of the design are produced and installed to conform to the requirements of the Drawings and Specifications.

1.03 ROLE OF CQA PERSONNEL

A. The CQA Consultant's presence does not include supervision or direction of the actual work by CONTRACTOR, its employees, or agents. Neither the presence of the CQA Consultant nor any observations and testing performed by the CQA Consultant shall excuse the Contractor from defects discovered in its work. CONTRACTOR shall abide

by all qualification requirements identified in these Specifications (for subcontractors, suppliers, manufacturers, etc.).

B. The role of CQA personnel is specifically to review the progress and quality of the work completed by CONTRACTOR. Unless CONTRACTOR obtains prior written approval by the DEVELOPER that identifies the duties and information to be monitored by field inspection personnel, under no circumstances shall CONTRACTOR be entitled to claim that the review, acknowledgement, or signature of CONTRACTOR's work orders, time sheets, or other administrative forms by CQA personnel constitute a change order claim or agreement regarding the time, equipment, materials, or effort expended.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01450
CONSTRUCTION QUALITY CONTROL

PART 1 GENERAL

1.01 SUMMARY

A. CONTRACTOR shall designate one person as the Quality Control Manager for the Work. The Quality Control Manager shall be responsible for preparing and submitting quality control certifications and test results to DEVELOPER, as applicable.

B. CONTRACTOR shall maintain an appropriate frequency of contact with DEVELOPER and its Construction Quality Assurance (CQA) Consultant to ensure that work quality is being maintained.

C. CONTRACTOR shall perform Construction Quality Control (CQC) field and laboratory testing as required by and as necessary to demonstrate compliance with the Construction Documents. If CONTRACTOR is unable to self-perform these tasks, CONTRACTOR shall retain a CQC Consultant to complete the required CQC field and laboratory testing.

1.02 DEFINITIONS

A. Construction Quality Control are those actions that provide a means to measure and regulate the characteristics of an item or service to contractual and regulatory requirements.

B. Construction Quality Control refers to those actions taken by the manufacturers, fabricators, installers, or CONTRACTOR to ensure that the materials and the workmanship meet the requirements of the Drawings and the Specifications.

1.03 SUBMITTALS

A. At least fourteen (14) day prior to the Preconstruction Meeting, CONTRACTOR shall prepare a CQC Plan for the Work. The Plan shall (i) identify the Quality Control Manager; (ii) identify CONTRACTOR's CQC Consultant and/or testing laboratories, if required; and (iii) describe the proposed means and methods for quality control to be implemented by CONTRACTOR. The CQC Consultant and/or laboratories shall be acceptable to DEVELOPER.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.01 GENERAL

A. CONTRACTOR shall be responsible for performing quality control oversight and documentation as necessary to ensure that the Work is in conformance with the requirements of the Construction Documents.

B. Quality control testing procedures and frequencies for individual products and material Care described in the Specifications.

3.02 FIELD QUALITY CONTROL

A. CONTRACTOR shall perform CQC soils testing during construction and shall promptly provide all test results to DEVELOPER.

B. DEVELOPER has the right to perform CQA testing and to observe the work at any time. CONTRACTOR shall be responsible for cooperating with DEVELOPER during all CQC and CQA testing activities and in resolving all problems identified during testing. CONTRACTOR shall provide all equipment and labor required to access CQC and CQA testing locations. CONTRACTOR shall repair any damage to finished Work caused by CQC or CQA sampling or testing activities.

C. Material sampling and testing for soils, geosynthetics, pipe, etc., is the responsibility of CONTRACTOR and shall be performed by the appropriate supplier or manufacturer. CONTRACTOR and its subcontractor(s) shall be responsible for cooperating with DEVELOPER during all testing activities. CONTRACTOR and its subcontractor(s) shall provide equipment and labor required to access CQA testing locations. CONTRACTOR and its subcontractor(s) shall repair any damage to finished Work caused by sampling or testing activities.

D. CONTRACTOR shall be responsible for geometric control of the Work. Any surveying that may be performed by DEVELOPER does not relieve CONTRACTOR of its responsibility to layout, control, and document its Work. Any additional surveying that is required, if the initial CQC survey shows that the Work has not yet been completed to the lines and grades shown on the Drawings, shall be performed at the expense of CONTRACTOR.

E. CONTRACTOR shall abide by all qualification requirements identified in these Specifications for subcontractors, supplies, manufacturers, etc.

F. The work shall, at all times, be subject to the observation of DEVELOPER. Observation or non-observation by DEVELOPER shall not relieve CONTRACTOR from his contractual obligation to furnish work and material and properly complete the work in accordance with these Construction Documents. If DEVELOPER considers that the work is not being properly accomplished, it may condemn or reject all or any part or the work and any materials or equipment incorporated into it. If any material, equipment,

or work is condemned or rejected by DEVELOPER, CONTRACTOR shall bear all expenses for removal and proper replacement of such material, equipment, or work required to be provided by Construction Documents. The expense of replacing any work performed by others that is adversely affected by removal and proper replacement of improper work performed by CONTRACTOR shall be borne by CONTRACTOR.

G. CQA personnel's presence does not include supervision or direction of the actual work by CONTRACTOR, its employees, or agents. Neither the presence of DEVELOPER nor any observations and testing performed by either party shall excuse CONTRACTOR from defects discovered in its work. CONTRACTOR shall abide by all qualification requirements identified in these Specifications (for subcontractors, supplies, manufacturers, etc.).

3.03 PROTECTION

A. CONTRACTOR shall use all means necessary to protect all prior work, including all materials and completed work of other Sections of these Specifications.

B. In the event of damage to work performed by CONTRACTOR prior to DEVELOPER's acceptance of the Work, CONTRACTOR shall immediately make all repairs and replacements necessary to the approval of DEVELOPER and at no additional cost to DEVELOPER.

3.04 SUBSTANDARD WORK OR MATERIALS

A. Any defective or substandard work or materials furnished by CONTRACTOR that is discovered before the final acceptance of the Work, as established by the Certificate of Substantial Completion, or during the subsequent warranty period, shall be removed immediately by CONTRACTOR even if it had been initially overlooked by DEVELOPER and recommended for payment. Satisfactory work or materials shall be substituted by CONTRACTOR for that rejected.

B. DEVELOPER may order tests on substandard or damaged work, equipment, or materials to determine the required functional capability for possible acceptance, if there is no other reason for rejection. The cost of such tests shall be borne by CONTRACTOR, and the nature, extent, and supervision of the tests will be as determined by DEVELOPER. If the results of the tests indicate that the required functional capability of the work, equipment, or material is impaired, consistent with the final general appearance of same, the work, equipment, or materials may be deemed substandard and shall be replaced by CONTRACTOR. CONTRACTOR may elect to replace the substandard work or material in lieu of performing the tests.

END OF SECTION

SECTION 31 00 00
EARTHWORK

PART 1 GENERAL

1.01 SCOPE OF WORK

A. CONTRACTOR shall furnish all labor, materials, tools, supervision, transportation, and installation equipment necessary to place and compact fill materials in accordance with these Specifications and the Drawings.

B. Fill materials described in this Section shall be used for construction as follows.

1. Prepared Subgrade Fill shall be existing material graded and compacted to provide a competent subgrade for construction of the final cover system.

2. Structural Fill shall be onsite or imported materials used for subgrade fill, as necessary, grading purposes in areas with structural loads, and as pipe and drainage structure backfill.

3. Cover Soil shall be suitable imported material or material excavated from the Stormwater Management Basins and Borrow Area and placed above the subgrade surface as the first layer of the Final Cover Systems.

4. Topsoil shall be imported material or material excavated from the Stormwater Management Basins and Borrow Area placed above the Cover Soil to support vegetation and minimize erosion of the Vegetated Final Cover System.

5. No. 3 Coarse Aggregate shall be imported aggregate placed above the Cover Soil in the Aggregate Final Cover System, as the Access Road surface, and as otherwise indicated on the Drawings.

6. Crushed Stone shall be used as backfill for vertical gas vents, subbase for drainage structures, access paths, and as pipe bedding material.

7. Riprap shall be used in various stormwater management features as indicated on the Drawings.

C. CONTRACTOR shall be prepared to place and compact fill materials in conjunction with the construction of other components of the Work.

D. The Work of this Section shall include, but not necessarily be limited to:

1. furnishing (if applicable), excavating, loading, transporting, placing, and compacting fill materials; and

2. stockpiling surplus fill material.

E. Fill materials placed and compacted shall conform to the dimensions, lines, grades, sections, and tolerances indicated by the Contract Documents.

F. CONTRACTOR shall be responsible to ensure that earthwork meets the requirements of this Section. Any fill material that does not conform to this Section will be rejected by the CQA Consultant or DEVELOPER and shall be replaced by CONTRACTOR with fill material that conforms to this Section at no cost to DEVELOPER.

1.02 SUBMITTALS

G. 45 days prior to delivering material to the Site, CONTRACTOR shall provide to the CQA Consultant documentation for each off-site borrow source that is proposed for use to demonstrate compliance with the material requirements detailed in this Section and the approved Material Acceptance Protocol (MAP). Final approval of a source for the fill materials will be at the sole discretion of the CQA Consultant based on the information provided by CONTRACTOR.

H. If Work is interrupted for reasons other than inclement weather, then CONTRACTOR shall notify DEVELOPER a minimum of 24 hours prior to the resumption of Work.

1.03 CONSTRUCTION QUALITY ASSURANCE

A. Construction and testing of earthwork shall be monitored by the CQA Consultant as outlined in the CQA Plan.

B. CONTRACTOR shall be aware of the activities outlined in the CQA Plan and shall account for these activities in the construction schedule. This specifically includes the time required for off-site shipment and testing of fill materials.

PART 2 PRODUCTS

2.01 EQUIPMENT

A. CONTRACTOR shall furnish, operate, and maintain grading and compaction equipment as is necessary to produce uniform layers, sections, and smoothness of grade for compaction and drainage.

B. CONTRACTOR shall furnish, operate, and maintain miscellaneous equipment such as scarifiers, disc harrows, spring tooth or spike tooth harrows, earth hauling equipment, and other equipment necessary for earthwork construction.

C. The final approval regarding the appropriateness of equipment used for earthwork will be at the sole discretion of the CQA Consultant.

2.02 PREPARED SUBGRADE FILL

A. Prepared Subgrade Fill shall consist of existing or relocated material graded and compacted to achieve the subgrade elevations and grades shown on the Drawings. Prepared Subgrade Fill shall be the material within 12 inches of the design subgrade elevations. Refer to

Section 31 00 00.01 Waste Excavation and Relocation for requirements related to subgrade fill deeper than 12 inches below the design subgrade elevation.

B. Prepared Subgrade Fill shall be competent and provide a firm surface for final cover system construction. Final determination of competent subgrade shall be made by the CQA Consultant based on proof-rolling or other methods proposed by CONRACTOR and approved by the CQA Consultant.

2.03 STRUCTURAL FILL

A. Structural Fill shall consist of relatively homogeneous soil that is free of debris, foreign objects, excess silt, excess roots, and excess organics.

B. Structural Fill may be material excavated from the Stormwater Management Basins and Borrow Area or imported fill.

C. Structural Fill shall meet the Unified Soil Classification System (USCS) classification for GW, GP, GC, GM, SM, SW, SP, SC, CL, or any combination thereof as determined in accordance with ASTM D2487, and shall have a maximum PI of 25, as determined in accordance with ASTM D4318.

D. Structural Fill shall have no particles larger than 6 inches in diameter as determined by visual inspection by the CQA CONSULTANT.

2.04 COVER SOIL

A. Cover Soil shall consist of suitable, relatively homogeneous soil imported from a licensed commercial source or excavated from the Stormwater Management Basins or Borrow Area that is free of debris, foreign objects, excess roots, and excess organics.

B. Suitability of Cover Soil shall be determined by the CQA CONSULTANT based on geotechnical and chemical conformance testing described in the CQA Plan.

2.05 TOPSOIL

A. Topsoil shall be a sandy loam, silt loam, or loam as defined by USDA (U.S. Department of Agriculture).

B. Topsoil shall consist of relatively homogenous soil that is free from refuse, materials toxic or otherwise deleterious to plant growth, subsoil, woody vegetation and stumps, roots, brush, clay lumps or similar objects. Sod and/or herbaceous growth need not be removed but shall be thoroughly broken up and mixed with the soil during handling or manufacturing operations. Manufactured topsoil shall consist of a mineral component and amendments as needed to meet the requirements of this Section.

C. Topsoil shall be from a prequalified source and shall demonstrate conformance with the chemical testing requirements described in the CQA Plan. A source will be considered prequalified at the CQA Consultant's discretion and a review by the NJDEP Bureau of

Sustainable Waste Management based on an evaluation of source background information and historical chemical testing results. Each prequalified topsoil source will be subject to conformance chemical testing described in the Material Acceptance Protocol.

D. Topsoil from excavated from the Stormwater Management Basins and Borrow Area have been evaluated by the Developer prior to construction and do not require further prequalification or conformance testing.

E. Topsoil shall conform to the following requirements:

1. pH between 5.8 and 7.0
2. Soluble salts (conductivity) less than 0.5 millimhos per centimeter
3. Particle size gradation shall be as follows

Screen or Sieve Size	Percent Passing by Weight
2-in.	100
1-in.	85 – 100
¼-in.	65 – 100
No. 200	≤ 40

4. Organic content by weight shall not be less than 3% or more than 7%

F. Topsoil shall be tested for the following nutrients and the results reported to the CQA CONSULTANT: nitrogen, ammonia-n, nitrate-n, total kjeldahl nitrogen, phosphorus, calcium, magnesium, and potassium.

G. DEVELOPER will furnish topsoil for the CONTRACTOR's use for this Work.

2.06 NO. 3 COARSE AGGREGATE

A. If Coarse Aggregate is made from quarry processed, virgin aggregate, it shall be crushed dolomite, limestone, gneiss, granite, or trap rock free from coatings of clay, clay clods, silt, plant matter, poor durability particles, and other objectionable materials such as debris, refuse, cinders, and slag.

B. No. 3 Coarse Aggregate shall conform to the New Jersey Department of Transportation (NJDOT) Standard Specifications for Road and Bridge Construction 2019 requirements for No. 3 Coarse Aggregate of Section 901.03.

2.07 CRUSHED STONE

A. If Crushed Stone is made from quarry processed, virgin aggregate, it shall be crushed dolomite, limestone, gneiss, granite, or trap rock free from coatings of clay, clay clods, silt,

plant matter, poor durability particles, and other objectionable materials such as debris, refuse, cinders and slag.

B. Crushed Stone shall conform to the New Jersey Department of Transportation (NJDOT) Standard Specifications for Road and Bridge Construction 2019 requirements for No. 57 Coarse Aggregate of Section 901.03.

2.08 RIPRAP

A. Riprap shall be as described in Section 901.08 of the New Jersey Department of Transportation (NJDOT) Standard Specifications for Road and Bridge Construction 2019.

B. Furnish riprap with a D_{50} and/or nominal size range noted on the Drawings.

PART 3 EXECUTION

3.01 GENERAL FILL REQUIREMENTS

A. Fill materials shall be placed and compacted to the lines and grades shown on the Drawings.

B. No frozen or thawing fill materials shall be placed or compacted. Fill materials shall be placed only on dry, unfrozen subgrade surfaces.

C. In areas adjacent to structures and utilities as shown on the Drawings, compaction equipment shall be restricted at the discretion of the CQA Consultant.

D. The surface of filled areas at other locations shall be within plus or minus one inch of elevations shown on the Construction Drawings unless a closer tolerance is necessary to meet requirements of other Sections of the Specifications or meet requirements shown on the Drawings.

3.02 PREPARED SUBGRADE FILL

A. Prepared Subgrade Fill shall be placed to the lines and grades shown in the Drawings.

B. Prepared Subgrade Fill shall be the material within 12 inches of the design subgrade elevations. Refer to Section 31 00 00.01 Waste Excavation and Relocation for execution requirements for subgrade fill deeper than 12 inches below the design subgrade elevation.

C. Where top-of-subgrade is established by excavation in competent ground, subgrade may be established without over excavation and replacement. Final determination of competent ground shall be made at the discretion of the CQA Consultant based on proof-rolling.

D. Where top of subgrade is established by excavation and existing subgrade material is deemed not competent by the CQA Consultant and subgrade must be established by over-excavation and replacement, material meeting the material and execution requirements for Structural Fill shall be used as backfill.

E. Where top of subgrade is established by filling, place Prepared Subgrade Fill in controlled lifts that result in a compacted lift thickness of 12 inches or less. Compact surface with a minimum of four passes of an approved smooth-drum roller or padded-foot compactors. One pass shall be defined as compaction equipment passing forwards and backwards over a given location.

F. CONTRACTOR shall finish each day's work with a smooth-drum roller to create a smooth surface, free from ruts or indentations, which will minimize moisture penetration. The area shall be left in a manner to promote runoff to a designated collection and removal point at the end of each day.

3.03 STRUCTURAL FILL

A. Structural Fill shall be placed in loose lifts that result in a compacted lift thickness of 12 inches or less. Compact surface with a minimum of six passes of an approved smooth-drum roller or padded-foot compactors. One pass shall be defined as compaction equipment passing forwards and backwards over a given location.

B. Compaction using a walk-behind vibratory compactor or hand compaction of material shall be used in locations where larger compaction is inappropriate due to limited area. In such areas, place fill in maximum 8-inch, loose layers and compact with mechanical tampers approved by the CQA CONSULTANT. In pipe trenches, each layer of backfill shall be not more than 8 inches in thickness before compaction. Place backfill on both sides of the pipe, simultaneously.

C. Compacted Structural Fill shall be monitored and/or tested by the CQA CONSULTANT as required by the CQA Plan. Should field testing indicate the moisture or density of any portion of a lift of Structural Fill outside of acceptable values, CONTRACTOR shall scarify, moisture condition, and recompact the lift as necessary to bring it into conformance with acceptable moisture and density values.

D. CONTRACTOR shall finish each day's work with a smooth-drum roller to create a smooth surface, free from ruts or indentations, which will minimize moisture penetration. The area shall be left in a manner to promote runoff to a designated collection and removal point at the end of each day.

E. Prior to continuing construction from the previous day's work, CONTRACTOR shall scarify the surface to provide a bond between the layers.

3.04 COVER SOIL

A. Cover Soil shall be placed above the cover system subgrade in a single lift to the thickness and grades shown on the Drawings using low ground-pressure equipment.

B. CONTRACTOR shall operate equipment in such a manner as to prevent sudden acceleration, braking, and/or sharp turns when placing Cover Soil.

C. The required Cover Soil lift thickness shall be verified and documented following placement of the Cover Soil by survey in accordance with Section 01 32 23.

3.05 TOPSOIL

A. Topsoil shall be placed in a single lift to the total thickness required as shown on the Drawings using low ground-pressure equipment.

B. CONTRACTOR shall place soil in a manner that minimizes compaction. Multiple passes by spreading equipment should be avoided when placing Topsoil.

C. CONTRACTOR shall apply fertilizer and permanently stabilize Topsoil as described in Section 32 93 10 and in the Soil Erosion and Sediment Control (SESC) Plan.

D. The required Topsoil lift thickness shall be verified and documented following placement of the Topsoil by survey in accordance with Section 01 32 23.

3.06 NO. 3 COARSE AGGREGATE

A. No. Coarse Aggregate shall be placed to the lines, grades, and cross-sections shown on the Drawings.

B. CONTRACTOR shall place No. 3 Coarse Aggregate in a manner that does not damage or disturbed the underlying soil surface or geosynthetic materials.

3.07 CRUSHED STONE

C. Crushed Stone shall be placed to the lines, grades, and cross-sections shown on the Drawings.

D. Where Crushed Stone is used as subbase for drainage structures, compact Crushed Stone to provide an even and unyielding surface. CONTRACTOR shall place Crushed Stone in a manner that does not damage underlying soil and geosynthetic.

3.08 RIPRAP

A. Riprap shall be placed to the lines, grades, and cross-sections shown on the Drawings.

B. Riprap shall be placed by hand or using equipment in a manner that does not damage the work or materials on which the Riprap is placed and is acceptable to the CQA CONSULTANT.

C. Where Riprap is placed as part of a drainage feature (e.g., downchute, riprap armoring of a diversion berm, etc.) Riprap shall be placed in a manner that does not impede or redirect stormwater in a manner inconsistent with the intent of the design.

3.09 FIELD QUALITY ASSURANCE

A. The CQA Consultant will monitor the placement and compaction of soils in accordance with the CQA Plan.

B. The CQA Consultant reserves the right to perform field CQA testing of soil during placement and compaction, as described below.

1. The minimum testing frequencies for material evaluation and construction quality evaluation are presented in the CQA Plan.
2. Sampling locations will be selected by the CQA Consultant.
3. A special testing frequency will be used at the discretion of the CQA Consultant when visual observations of construction performance indicate a potential problem. Additional testing will be considered when the following occur:
    a. the rollers slip during rolling operation
    b. the lift thickness is greater than specified
    c. the soil is at improper and/or variable moisture content
    d. fewer than the specified number of roller passes are made
    e. dirt-clogged rollers are used to compact the material
    f. the rollers do not have optimum ballast
    g. the degree of compaction is doubtful
4. During construction, the frequency of testing may also be increased by the CQA Consultant in the following situations:
    a. adverse weather conditions
    b. breakdown of equipment
    c. at the start and finish of grading
    d. if the material fails to meet specifications
    e. the work area is reduced

C. Perforations:

1. Perforations in the compacted soil resulting from CQA testing shall be backfilled with similar soil. The soil shall be hand-tamped by CONTRACTOR to the satisfaction of the CQA Consultant.

D. Defective Areas:

1. If a defective area is discovered in the compacted soil, then the CQA Consultant will notify CONTRACTOR who shall proceed to determine the extent and nature of the defect. If the defect is indicated by an unsatisfactory test result, then CONTRACTOR will determine the extent of the defective area by additional tests, observations, a review of records, or other means that CONTRACTOR deems appropriate. If the

defect is related to adverse site conditions, such as overly wet soils or surface desiccation, then CONTRACTOR will define the limits and nature of the defect.

2. After the extent and nature of a defect has been determined, CONTRACTOR shall correct the deficiency to the satisfaction of the CQA Consultant. The cost of corrective actions shall be borne by CONTRACTOR.
3. Additional testing will be performed by CONTRACTOR to verify that the defect has been corrected. This additional testing will be performed and submitted to the ENGINEER before any additional work is allowed in the area of deficiency.

END OF SECTION

SECTION 31 00 00.01
WASTE EXCAVATION AND RELOCATION

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This section includes descriptions of the work necessary for the excavation of municipal solid waste (MSW) or other unclassified waste materials (e.g., batteries, tires, drums, etc.).

B. All work of this Section shall be performed in accordance with the Closure and Post-Closure Care Plan (Closure Plan) approved by the New Jersey Department of Environmental Protection (NJDEP) Division of Sustainable Waste Management (DSWM).

C. Based on the landfill history as understood by the DEVELOPER, non-hazardous MSW waste is present in the landfill. The MSW waste encountered at the landfill will be relocated as needed to achieve the closure design subgrades.

D. Should unclassified waste materials other than MSW waste, including chemicals or hazardous waste materials, be encountered during construction, CONTRACTOR and DEVELOPER shall cease operations immediately and, in consultation with the DSWM, develop a contingency plan to evaluate and manage the material(s).

E. CONTRACTOR shall furnish all labor, materials, tools, supervision, transportation, installation equipment, and incidentals necessary to complete the work specified herein and indicated on the Drawings. The work shall include, but not be limited to:

1. removing and stockpiling existing landfill cover soils on the landfill for use as daily and intermediate cover as agreed by CONTRACTOR and DEVELOPER to be beneficial to the Work;
2. excavating Waste and soil from the landfill to accomplish the grades shown on the Drawings and as specified herein;
3. transporting Waste and soil from the cut areas to the designated fill areas of the landfill;
4. placing daily and intermediate cover over exposed Waste after regrading;
5. controlling and managing stormwater in the Waste excavation and placement areas;
6. controlling litter, dust, odors, and other air emissions in the vicinity of the Waste excavation and placement areas; and
7. providing full Health and Safety protection to on-site construction workers.

F. CONTRACTOR shall be prepared to excavate and relocate waste in conjunction with the construction of other components of the Work.

1.02 SUBMITTALS

A. At least 45 days prior to initiating waste excavation activities, CONTRACTOR shall submit a Waste Excavation and Relocation Plan to the CQA Consultant for review by the CQA Consultant and DSWM. This plan shall address the excavation and regrading procedures that will be used during the Work. The Waste Excavation and Relocation Plan shall include, but not be limited to the topics below.

1. References to and relevant discussion of the Dewatering and Stormwater Control Plan required by Section 31 23 19;
2. A section specifically addressing control of air emissions, including litter, odors, volatile organic compounds (VOCs), and dust. The hierarchy for implementing various cover materials shall be described in detail.
3. A section specifically addressing worker safety and stability during Waste excavation.
4. Identification of a New Jersey licensed hazardous waste transporter responsible for the handling, transport and disposal of hazardous materials that may be encountered during excavation.
5. Identification of a hazardous waste disposal facility responsible to final acceptance of hazardous materials that may be encountered during excavation.
6. Transportation procedures and routes for vehicles relocating Waste to fill areas.
7. Placement and compaction procedures for relocated Waste.
8. Procedures for covering exposed Waste at the end of each working day as required by the conditions of the Closure Plan approval.
9. The approximate maximum area of waste to be exposed daily and proposed source of Daily Cover as described in Part 2.02 of this Section.
10. The proposed materials and substances for odor control as described in Part 2.03 of this Section.
11. Procedures for protecting the subgrade until installation of the final cover system is complete.

B. At least one week prior to the start of waste excavation, CONTRACTOR shall submit written acknowledgement that their key on-site management personnel have reviewed and understood all pertinent aspects of the Waste Excavation and Relocation Plan.

1.03 COMPLIANCE WITH REGULATIONS

A. It is the sole responsibility of the CONTRACTOR to be completely familiar with and to follow all local, state, and federal regulations and conditions of the Closure Plan approval pertaining to the work required in this Section.

1.04 CONSTRUCTION QUALITY ASSURANCE (CQA)

A. Waste excavation and relocation activities will be monitored by the CQA Consultant.

B. CONTRACTOR shall be aware of the activities of the CQA Consultant, as described in the CQA Plan, and shall account for these activities in the construction schedule.

C. CONTRACTOR shall assist the CQA Consultant in every manner necessary for the proper performance of activities set forth in these Specifications and the CQA Plan.

D. Inspections performed by the CQA Consultant in no manner relieve CONTRACTOR of the responsibility to construct all work to conform to the Construction Documents, Closure Plan, and permit conditions. If inspections indicate work does not meet specified requirements, CONTRACTOR shall rework to the satisfaction of the CQA Consultant at a cost borne solely by the CONTRACTOR.

PART 2 PRODUCTS

2.01 WASTE

A. Waste is the existing refuse, debris, and soils located within the landfill. It does not include construction Waste generated by CONTRACTOR during implementation of the work. CONTRACTOR shall be fully aware of the fact that large debris could be encountered in the existing waste mass and will need to be relocated as part of the required excavation, transport, and placement activities.

B. Existing cover soil shall be considered and handled as Waste, except as noted otherwise in these Construction Documents or at the direction of the DEVELOPER.

2.02 DAILY AND INTERMEDIATE COVER

A. Daily Cover and Intermediate Cover shall be a soil or other material identified in the Closure Plan or proposed by the CONTRACTOR and approved by the DEVELOPER and DSWM used to cover exposed waste in excavation and relocation areas.

B. Daily Cover may be existing cover soil within the landfill or soils obtained from on-site areas, as approved by the DEVELOPER, for use in covering a working face that will continue to be excavated or graded or on temporary stockpile slopes. Daily and Intermediate Cover sourced from the existing landfill cover soil shall be free from waste.

C. If on-Site soils are not available for use, CONTACTOR shall use material meeting the requirements for Cover Soil outlined in Section 31 00 00 of the Specifications or an alternative material approved by the CQA Consultant and DEVELOPER.

2.03 ODOR CONTROL SUBSTANCES

A. CONTRACTOR may utilize substances as approved by the DEVELOPER such as chemicals or soil amendments intended to control odors during waste excavation and

grading activities.

B. Odor control chemicals shall include odor neutralizing chemicals but shall not be deodorizers or masking agents. Odor neutralizing chemicals shall be applied in the form of solids, foam, or large droplets. Aerosols or gases shall not be used.

PART 3 EXECUTION

3.01 FAMILIARIZATION

A. Prior to implementing any of the work described in this Section, CONTRACTOR shall become thoroughly familiar with the Site, the Site conditions, and all portions of the work falling within this Section.

B. Prior to implementing any of the work in this Section, CONTRACTOR shall carefully inspect the installed work of all other Sections and verify that all work is complete to the point where the work of this Section may properly commence without adverse impact.

C. CONTRACTOR shall perform all Waste excavation and relocation work in strict accordance with their submitted Health and Safety Plan.

3.02 DAILY AND INTERMEDIATE COVER

A. In accordance with the approved Closure Plan, exposed waste will be covered by 6 inches of Daily Cover at the end of each day. A minimum of 12 inches of Intermediate Cover shall be applied to all waste exposed for any period exceeding 24 hours and extending up to 6 months. Thereafter, the Final Cover System shall be constructed and maintained over the waste material.

B. Daily and Intermediate Cover are not required in areas that have reached design subgrade elevations and will be covered with Cover Soil (defined in Section 31 00 00) prior to the end of that working day.

C. CONTRACTOR may propose alternative methods for daily cover for approval by the DEVELOPER and DSWM.

3.03 ODOR CONTROL

A. CONTRACTOR shall be responsible for control of odors at the Site during waste excavation and grading activities. Determination of adequacy of the CONTACTOR's odor control measures shall be at the discretion of the DEVELOPER.

B. CONTRACTOR shall schedule waste excavation to the extent practicable such that final grades are achieved and cover soils are placed at the end of each working day.

C. In the event that final grades and or placement of permanent interim cover soils cannot be achieved at the end of each working day, DEVELOPER may approve the CONTRACTOR to place Daily Cover over limited areas to control odor.

D. CONTRACTOR shall apply additional odor mitigation measures during waste excavation activities as necessary to control odors. The additional odor controls may include, but are not limited to:

1. Scheduling of work around potentially adverse weather (e.g., avoiding work during hot and/or humid weather);
2. Application of odor control substances as defined in Part 2.03 directly to the subject area;
3. Continuous misting or fine spay of water with and/or without odor neutralizing liquid amendments; or
4. Application of compost or yard waste to the waste surface to filter odors.

3.04 WASTE EXCAVATION

A. CONTRACTOR shall excavate Waste to the grades shown on the Drawings. If, during the waste-removal process, the excavation is deemed unsafe by CONTRACTOR or DEVELOPER, or air monitoring criteria are exceeded, then excavation activities in the subject area shall be temporarily halted. The CQA Consultant and CONTRACTOR will convene within one working day to assess the situation. Following the meeting, a decision will be reached to either reconfigure the excavation (e.g., flatten slopes) or modify work practices.

B. In general, CONTRACTOR shall expose Waste in relatively small sections (typically less than one to three acres at a time) to preclude uncovered waste from creating an environmental or public health nuisance or creating a safety hazard. In addition, CONTRACTOR shall sequence the work to such that excavated Waste is immediately transported for placement and compaction in its final location.

C. Contractor shall take necessary measures to maintain dry conditions within the Waste excavation area and to prevent stormwater run-off from contacting exposed Wastes

D. CONTRACTOR shall not stockpile or place Waste outside the limit of the active excavation or placement areas without prior approval of the Developer. The Contractor shall not stockpile Waste in the excavation or placement areas in a manner that decreases the stability of the landfill slopes.

E. Once subgrade reaches the grades shown on the Drawings the excavated area shall be covered in accordance with the conditions of the Closure Plan approval prior to the end of the working day.

F. Placement of additional cover materials, dust suppressants (or water), and/or VOC or odor control chemicals (e.g., odor control foam) shall be performed by CONTRACTOR as needed to satisfactorily control litter, dust, VOCs, and odors. Groundwater or surface water from the site shall not be used unless pre-approved by the Developer.

3.05 WASTE TRANSPORTATION

A. CONTRACTOR shall use vehicles and/or temporary haul routes that preclude excavated Waste or leachate spilling in areas that are not part of the active excavation area. CONTRACTOR shall use only the designated haul routes, as set forth in the approved Waste Excavation and Relocation Plan, unless otherwise pre-approved by the CQA Consultant.

B. CONTRACTOR shall use vehicles and procedures that minimize the generation of air emissions (e.g., litter, dust, VOCs, odors) during Waste transportation activities.

3.06 WASTE PLACEMENT AND COMPACTION

A. CONTRACTOR shall relocate Waste to achieve the subgrade grades indicated on the Drawings.

B. CONTRACTOR shall place and compact waste such that no unsuitable material (e.g., oversized particles, soft or wet conditions, etc.) remain within two feet of the design subgrade elevations.

C. Compaction equipment used for compacting Waste shall be heavy static tamping foot compactors (e.g., Caterpillar 815B, 825C, 816B, or 826C) with operating weight and kneading action that achieves the required compaction to the satisfaction of the Developer.

D. Where subgrade is established by excavation in competent ground, subgrade may be established without over excavation and replacement. Final determination of competent ground shall be made at the discretion of the Developer based on observation of proof-rolling, as required by the CQA Plan.

E. Where top of subgrade is established by excavation and existing subgrade material is deemed not competent by the Developer, subgrade must be established by over-excavation and replacement. Material meeting the material and execution requirements of Section 31 00 00 for Structural Fill shall be used as backfill, unless otherwise approved by the Developer.

F. Where subgrade is established by filling, the Contractor shall place the Waste in continuous layers and compact in accordance with this Section, making grade changes gradual and blending slopes into level areas. Relocated Waste shall be placed in controlled lifts that result in a compacted lift thickness of 12 inches or less. Each lift shall be compacted using a minimum of two full-coverage compaction passes or until the material is compacted to the satisfaction of the Developer. A single pass is defined as traveling both forward and backward over a particular location.

G. The Contractor shall excavate pit(s) within the designated landfill areas and bury any large (greater than 36 inches in any dimension) Waste objects into the pit(s) to ensure that the large object(s) will not damage the final cover system.

H. In all cases, it is the sole responsibility of the Contractor to use equipment and methods

such that no damage occurs to existing features or work that has already been performed.

3.07 UNCLASSIFIED MATERIALS

A. If an unknown material is discovered, CONTRACTOR shall cease immediately and instruct all unnecessary personnel to clear the immediate area surrounding the waste. The CONTRACTOR shall then initiate air monitoring procedures per its and/or the DEVELOPER's Health and Safety Plan. CONTRACTOR and DEVELOPER shall notify DSWM and, in consultation with DSWM, develop a contingency plan to evaluate and manage the material(s) prior to any additional action.

B. Hazardous waste shall be excavated, stockpiled, packaged and disposed of in accordance with NJAC 7:26.

3.08 CHARACTERIZATION OF UNCLASSIFIED WASTE

A. Characterization of unclassified waste shall be performed in the field by the CONTRACTOR. CONTRACTOR shall notify the DEVELOPER when unclassified waste materials are encountered and shall evaluate the unclassified materials.

B. The DEVELOPER's evaluation of the waste shall include the following:

1. Visual observation of the unclassified waste materials for characteristics of hazardous waste. Readily identifiable characteristics of hazardous waste may include:

   a. Intact filled or partially filled drums;

   b. Batteries; and

   c. Materials labeled or otherwise readily identifiable as hazardous waste.

2. Unclassified waste characterized as non-hazardous shall be excavated and relocated within the landfill.

3. Waste characterized as hazardous shall be immediately isolated for further evaluation by the DEVELOPER and handling by the licensed site hazardous waste transporter.

3.09 WATER CONTROL AND DEWATERING

A. At all times during construction, CONTRACTOR shall provide and maintain proper equipment and facilities to prevent and/or remove water entering the Waste excavation or relocation area so as to obtain and maintain safe and observable working conditions.

B. CONTRACTOR shall be fully responsible for minimizing and controlling groundwater and surface water run-off and run-on around the Waste excavation or relocation area.

C. CONTRACTOR shall control stormwater in accordance with their approved Dewatering and Stormwater Control Plan prepared in accordance with Section 31 23 19.

D. Surface water (e.g., groundwater, precipitation, construction water, or run-on) that comes

into contact with exposed Waste, as well as liquid that seeps from the Waste, shall be considered leachate and shall be handled in accordance with the approved Dewatering and Stormwater Control Plan prepared in accordance with Section 31 23 19.

3.10 PROTECTION OF WORK

A. CONTRACTOR shall use all means necessary to protect all prior work, including all materials and completed work of other Sections.

B. In the event of damage, CONTRACTOR shall immediately make all repairs and replacements necessary to the approval of DEVELOPER and CQA Consultant at a cost borne solely by CONTRACTOR.

END OF SECTION

SECTION 31 10 00
SITE CLEARING

PART 1 GENERAL

1.01 SCOPE OF WORK

A. CONTRACTOR shall furnish all labor, materials, tools, supervision, transportation, installation equipment, and incidentals necessary to complete the Work specified herein and shown on the Drawings. The Work shall include, but not be limited to clearing and grubbing the work area of tree stumps and grass, shrubs, brush, and incidental debris.

B. CONTRACTOR shall manage cleared vegetation as described in this Section and in the Closure and Post-Closure Care Plan (Closure Plan) approved by the New Jersey Department of Environmental Protection (NJDEP) Bureau of Sustainable Waste Management (BSWM).

C. Should vegetation or other debris be removed and disposed off-Site, CONTRACTOR shall load, transport, and dispose of debris in accordance with local, state and federal rules and requirements.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.01 CLEARING AND GRUBBING

A. CONTRACTOR shall clear all areas that are required for access to the Site and execution of Work and shall remove other incidental debris shown on the Drawings and approved by the CQA Consultant or DEVELOPER. Appropriate erosion and sedimentation controls shall be in place in all areas to be cleared and grubbed.

B. CONTRACTOR shall clear, grub, chip, and stockpile vegetation as follows:

1. Trunks and branches shall be cut off 6 inches above the ground surface and managed as proposed by the CONTRACTOR and approved by the DEVELOPER.

2. Stumps and roots in areas accepting 2 ft or more of fill may be left in place. Stumps and roots in excavation areas or areas with less than 2 ft of fill shall be removed, chipped, and stockpiled outside of the landfill closure area.

C. If weather conditions are unsuitable for clearing and grubbing, as determined by the Developer, then CONTRACTOR shall cease operations until permission to resume operations is obtained from the Developer.

3.02 SOIL STRIPPING

A. CONTRACTOR shall strip existing cover soil for use as daily cover or grading fill beneath the Final Cover System in accordance with Section 31 00 00.01.

B. CONTRACTOR shall segregate debris or other unsuitable materials from the existing cover soil to the satisfaction of the Developer. Such materials may be used as grading fill beneath the Final Cover System.

3.03 WASTE CHARACTERIZATION AND DISPOSAL

A. Debris generated from clearing that is to be disposed offsite shall be stockpiled at a location within the limit of the landfill designated by the Developer for waste characterization.

B. CONTRACTOR shall propose a disposal facility acceptable to the DEVELOPER.

C. Characterization sampling and analyses will be performed by CONTRACTOR in accordance with the requirement of the approved disposal facility.

D. Following characterization, CONTRACTOR shall load out and transport vegetation and debris for off-site disposal at the approved disposal facility.

END OF SECTION

SECTION 31 23 19
CONSTRUCTION DEWATERING AND STORMWATER CONTROL

PART 1 GENERAL

1.01 SCOPE OF WORK

A. CONTRACTOR shall furnish all materials, implements, machinery, equipment, tools, supplies, transportation, labor and supervision required to perform and maintain all construction dewatering and stormwater control as required throughout the duration of the Work.

B. Contractor shall prepare a Construction Dewatering and Stormwater Control Plan to address means and methods for managing liquids during construction.

C. Construction dewatering and stormwater control shall include (i) characterizing, managing, and if required, disposing of off-site existing impounded stormwater, (ii) minimizing stormwater contact with disturbed waste and soil by redirecting stormwater runoff from undisturbed areas to an approved discharge location and (iii) controlling, removing, containerizing, characterizing, and disposing off-site of stormwater runoff in contact with disturbed waste and soil (i.e., contact stormwater or leachate).

D. CONTRACTOR shall be solely liable for additional costs and/or delays incurred due to completion of Work in stages to allow for control of stormwater in accordance with the Construction Documents.

1.02 SUBMITTALS

A. At least 45 days prior to the start of the Work, CONTRACTOR shall submit to the Developer a Construction Dewatering and Stormwater Control Plan for review by the Developer and Division of Sustainable Waste Management (DSWM). The plan shall incorporate measures to provide stormwater control and dewatering. The Construction Dewatering and Stormwater Control Plan shall include, but not necessarily be limited to, descriptions of the Contactor's proposed means and methods, including necessary equipment, to complete the following:

   1. characterize, treat and/or dispose of off-site, or discharge existing liquid impounded at the landfill
   2. divert and discharge stormwater runoff (i.e., non-contact water) and the proposed discharge point(s)
   3. collect, contain, store, and treat and/or dispose contact stormwater (i.e., leachate)

B. The Construction Dewatering and Stormwater Control Plan shall also address sequencing the Work to minimize stormwater entering the Work area.

C. CONRACTOR shall submit to the DEVELOPER and CQA Consultant the following

documentation as it relates to the characterization and disposal of existing impounded liquids or containerized leachate:

1. Prior to characterization, the name and contact information of the proposed disposal facility, the license or operation permit of the facility, and the facility's waste characterization testing requirements
2. Upon receipt by CONTRACTOR, the results of waste characterization testing.
3. At least 7 days prior to treating and/or transporting waste off-site for disposal, the completed waste profile.
4. Upon disposal at the approved disposal facility, return waste manifests.

1.03 GENERAL REQUIREMENTS

A. Any liquid coming in contact with waste shall be considered leachate and shall be managed as such in accordance with the Closure Plan, conditions of the Closure Plan approval issued by DSWM, the Contractor's approved Construction Dewatering and Stormwater Control Plan.

B. Excavation and cover system installation occur in areas that may be subjected to runoff from surrounding areas. Therefore, CONTRACTOR shall provide and maintain at all times, before and during construction, ample means and devices, including all necessary equipment, power and labor, to pump, bail or otherwise promptly remove and properly dispose of all water entering or found in the landfill, excavations, trenches or other parts of work. Excavation and structures must be kept dry until all work to be built therein is completed.

C. CONTRACTOR shall maintain throughout the duration of the Work, ample provisions to prevent flotation of utilities, pipes and structures and shall be responsible for any damage caused by water.

D. It shall be the CONTRACTOR's responsibility to assure that Construction Dewatering operations are conducted so as not to affect adjacent structures. CONTRACTOR shall be responsible for any damage to adjacent structures, engineering controls, monitoring wells, etc.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.01 GENERAL

A. CONTRACTOR shall provide continuous pumping if required to prevent damage to the Work.

B. CONTRACTOR shall take all reasonable measures to minimize stormwater entering the Work area in order to minimize the volume of water to be removed from the Work area.

C. Water removed from the excavations shall be containerized and treated and/or disposed of off-site at the discretion of the DEVELOPER.

D. CONTRACTOR shall supply all piping, hose or trucking necessary to remove, collect, relocate and/or containerize, transport and dispose water. Where temporary piping crosses access roads, CONTRACTOR shall install a rigid sleeve and construct a berm over the pipe to provide continued vehicular access across the pipe.

E. Construction Dewatering shall conform to the latest version of New Jersey Department of Transportation "*Soil Erosion and Sediment Control Standards*".

F. CONTRACTOR shall not use proposed permanent stormwater management features (i.e., stormwater management basins) to collection, store, treat, or dispose of leachate.

3.02 TREATMENT, STORAGE, AND DISCHARGE

A. CONTRACTOR shall containerize and store leachate in accordance with its approved Construction Dewatering and Stormwater Control Plan to facilitate appropriate characterization and treatment and/or disposal.

B. CONTRACTOR shall collect and have analyzed waste characterization samples at a frequency acceptable to the proposed disposal facility and prepare and provide the required waste profile and waste manifests required by the disposal facility and appropriate authorities. The disposal facility shall be acceptable to the DEVELOPER and CQA Consultant.

C. CONTRACTOR shall transport the leachate to the approved disposal facility and provide the DEVELOPER and CQA Consultant with signed return waste manifests from the disposal facility.

END OF SECTION

SECTION 32 93 10
PERMANENT VEGETATION

PART 1 GENERAL

1.01 SCOPE OF WORK

A. CONTRACTOR shall furnish all labor, materials, tools, supervision, transportation, installation equipment, and incidentals required to establish permanent vegetative stabilization within disturbed areas in accordance with the Construction Documents.

B. Work described in this Section shall be performed, as applicable, in accordance with the *Standard for Permanent Vegetative Cover for Soil Stabilization in the New Jersey Department of Agriculture Standards for Soil Erosion and Sediment Control in New Jersey* (July 2017) (E&S Manual).

1.02 SUBMITTALS

A. At least 60 days before installing permanent vegetation, CONTRACTOR shall submit to the Developer a Soil Amendment and Vegetation Installation Plan describing the materials, equipment, and means and methods for amending the Topsoil and installing permanent vegetation in disturbed areas. The Soil Amendment and Vegetation Installation Plan shall reference the ESC Manual, where applicable, and shall address the following:

   1. Amendment type, intended purpose, application rate, and method for applying the amendment, as needed to address Topsoil deficiencies noted in the laboratory reports in the Material Acceptance Protocol.
   2. Seed mixture source, quantity, and application rate
   3. Manufacturer specifications for the proposed erosion control mat
   4. Mulch type, application rate, and method for installing and securing mulch
   5. Fertilizer type and application rate

B. At least 14 days prior to delivering the product to the Site, CONTRACTOR shall provide the CQA Consultant and DEVELOPER data sheets on the proposed erosion control mat.

PART 2 PRODUCTS

2.01 SEED MIX

A. A permanent seed mixture shall be applied throughout disturbed areas.

B. The seed mixture shall be the Non-Roadside Pinelands Mixture of the E&S Manual.

2.02 FERTILIZER

A. Water-soluble, quick-release fertilizer with a nutrient analysis (ratio of sources of Nitrogen:

Phosphorous: Potassium) not be greater than 10-10-10.

2.03 MULCH AND EROSION CONTROL MAT

A. Mulch shall be wood fiber, paper fiber, hay, or straw meeting the material quality standards of the E&S Manual.

B. Erosion Control Mat shall be double-sided Curlex II, manufactured by American Excelsior Company, or equal approved by CQA Consultant.

PART 3 EXECUTION

3.01 SEEDING AND PLANTING

A. Seedbed shall be prepared and fertilized in accordance with the E&S Standards.

B. Seed shall be applied on clean bare soil.

C. Seed should be applied at the rates and using methods described in the E&S Standards for the specified seed mixture.

D. Immediately following seeding, the seeded area shall be lightly raked to ensure proper seed-soil contact. Following seeding, the area shall be mulched to conserve moisture.

3.02 MULCH AND EROSION CONTROL MAT

A. Mulch shall be installed at the rates and methodology for the selected much described in the E&S Standards.

B. Erosion Control Mat shall be installed either 48 hours prior to or within 48 hours after seeding operations have been completed in the work areas.

C. Erosion Control Mat shall be placed on a smooth surface that is free of trash, ruts, and rocks. Erosion control mat shall be placed flat and shall conform to the contours of soil surface.

D. Erosion Control Mat to be placed on slopes shall be installed in accordance with the manufacturer's instruction and as follows:

1. Anchor trenches shall be located at the crest and the toe of the slope. The anchor trench at the crest shall be located 1 ft. from the edge of the slope. The geometry of the anchor trench, type of fastener, fastener spacing, and method of construction of the anchor trenches shall be in accordance with the manufacturer's instructions.

2. Erosion mat shall be unrolled as directed by the manufacturer. Adjacent panels of erosion mat shall be installed with a minimum overlap of 4 in. Fastening of the erosion mat shall begin in the toe anchor trench and shall progress upslope to the crest anchor trench. Spacing of fasteners shall be in intervals of 3 to 5 ft. vertically upslope. Horizontal spacing of fasteners shall be in accordance with the manufacturer's

instructions. Backfill shall be placed in anchor trenches over fasteners as construction proceeds.

E. Erosion Control Mat shall be properly shingled, overlapped, and secured to prevent water flow beneath the erosion control mat.

F. Mulch or erosion control mat that has, at the discretion of the CQA Consultant, been rotted or otherwise degraded prior to the establishment of permanent vegetation shall be replaced by the CONTRACTOR at no cost to DEVELOPER.

3.03 ESTABLISHMENT AND PROTECTION

A. CONTRACTOR shall maintain disturbed areas until such time as vegetation has become permanently established. This may include making repairs due to erosion, reseeding, remulching, or a combination thereof.

B. Establishing permanent vegetation means the following:

1. There exists a minimum of 80 percent vegetative cover with the specified seed mixture for the seeded area and mowed once, as defined in the E&S Manual

2. There are no bare areas (defined as less than 50 percent vegetation coverage) of greater than 10 square feet.

3. There are no erosion rills deeper than 1 inch.

C. CONTRACTOR shall protect established vegetation from damage throughout the course of construction. Any damaged vegetation shall be replaced by the CONTRACTOR at no cost to the DEVELOPER.

Re: Delineation of the Landfill Boundary
Manchester Township, Ocean County, New Jersey
MC Project No. MCT-044A

Dear Ms. Markulic:

Maser Consulting completed a geophysical evaluation of existing landfill located at 1501 Highway 70, Manchester, Ocean County, New Jersey, 08759. These efforts were performed to evaluate the presence of anomalies representative of buried landfill materials. The following is a summary of our efforts and findings:

1.0 INTRODUCTION

Maser Consulting completed a geophysical evaluation of existing Whiting Recycling Center located at 1 Sams Pitt Road, Manchester, Ocean County, New Jersey, 08759 on October 9th and 10th 2019. To further establish confidence in our findings, we returned to site for subsurface exploration on January 3rd, 2020 with the areas of investigation noted in the subject area illustrated in the enclosed Figure 1.

2.0 METHODOLOGY

2.1 GPR Surveying

GPR surveys were conducted in accessible portions of the subject area using a GSSI SIR-4000 instrument with a 350-megahertz antenna. Site conditions allowed for a maximum exploration depth of 15.0 feet below existing surface grade. GPR data collection was limited to accessible regions of the subject area. Parts of existing property was overgrown with thick vegetation and scrub brush along with large debris. Using an integrated survey wheel, distance normalization was completed in-field for calibration of various surfaces and terrain encountered during the investigation. GPR profiles were conducted over specific anomaly locations. Collected data was post-processed using RADAN software.

2.2 EM Surveying

EM metal-detection surveying was performed using a Geonics EM61-MK2 time-domain field instrument with integrated GPS system. Anomalies are typically associated with objects such as metal, debris, pipes, buried tanks, buried drums, and assorted intact structural materials of buildings/dwellings. The instrument

was calibrated to local soil conditions prior to surveying. The survey was performed using a tow-array utilizing an ATV vehicle and F-150 truck. Collected data was post-processed using DAT61 and Surfer contouring software.

2.3 Subsurface Exploration

Test Pits were completed using a backhoe down to a depth of 6.0 (+/-) feet to evaluate the presence of debris associated with landfill materials as part of our geophysical ground-truthing. In areas not accessible to backhoe, Maser Consulting completed hand auger borings. Exploration locations are illustrated on the enclosed Figure 1. According to our observations, the exploration areas were congruent with our geophysical findings.

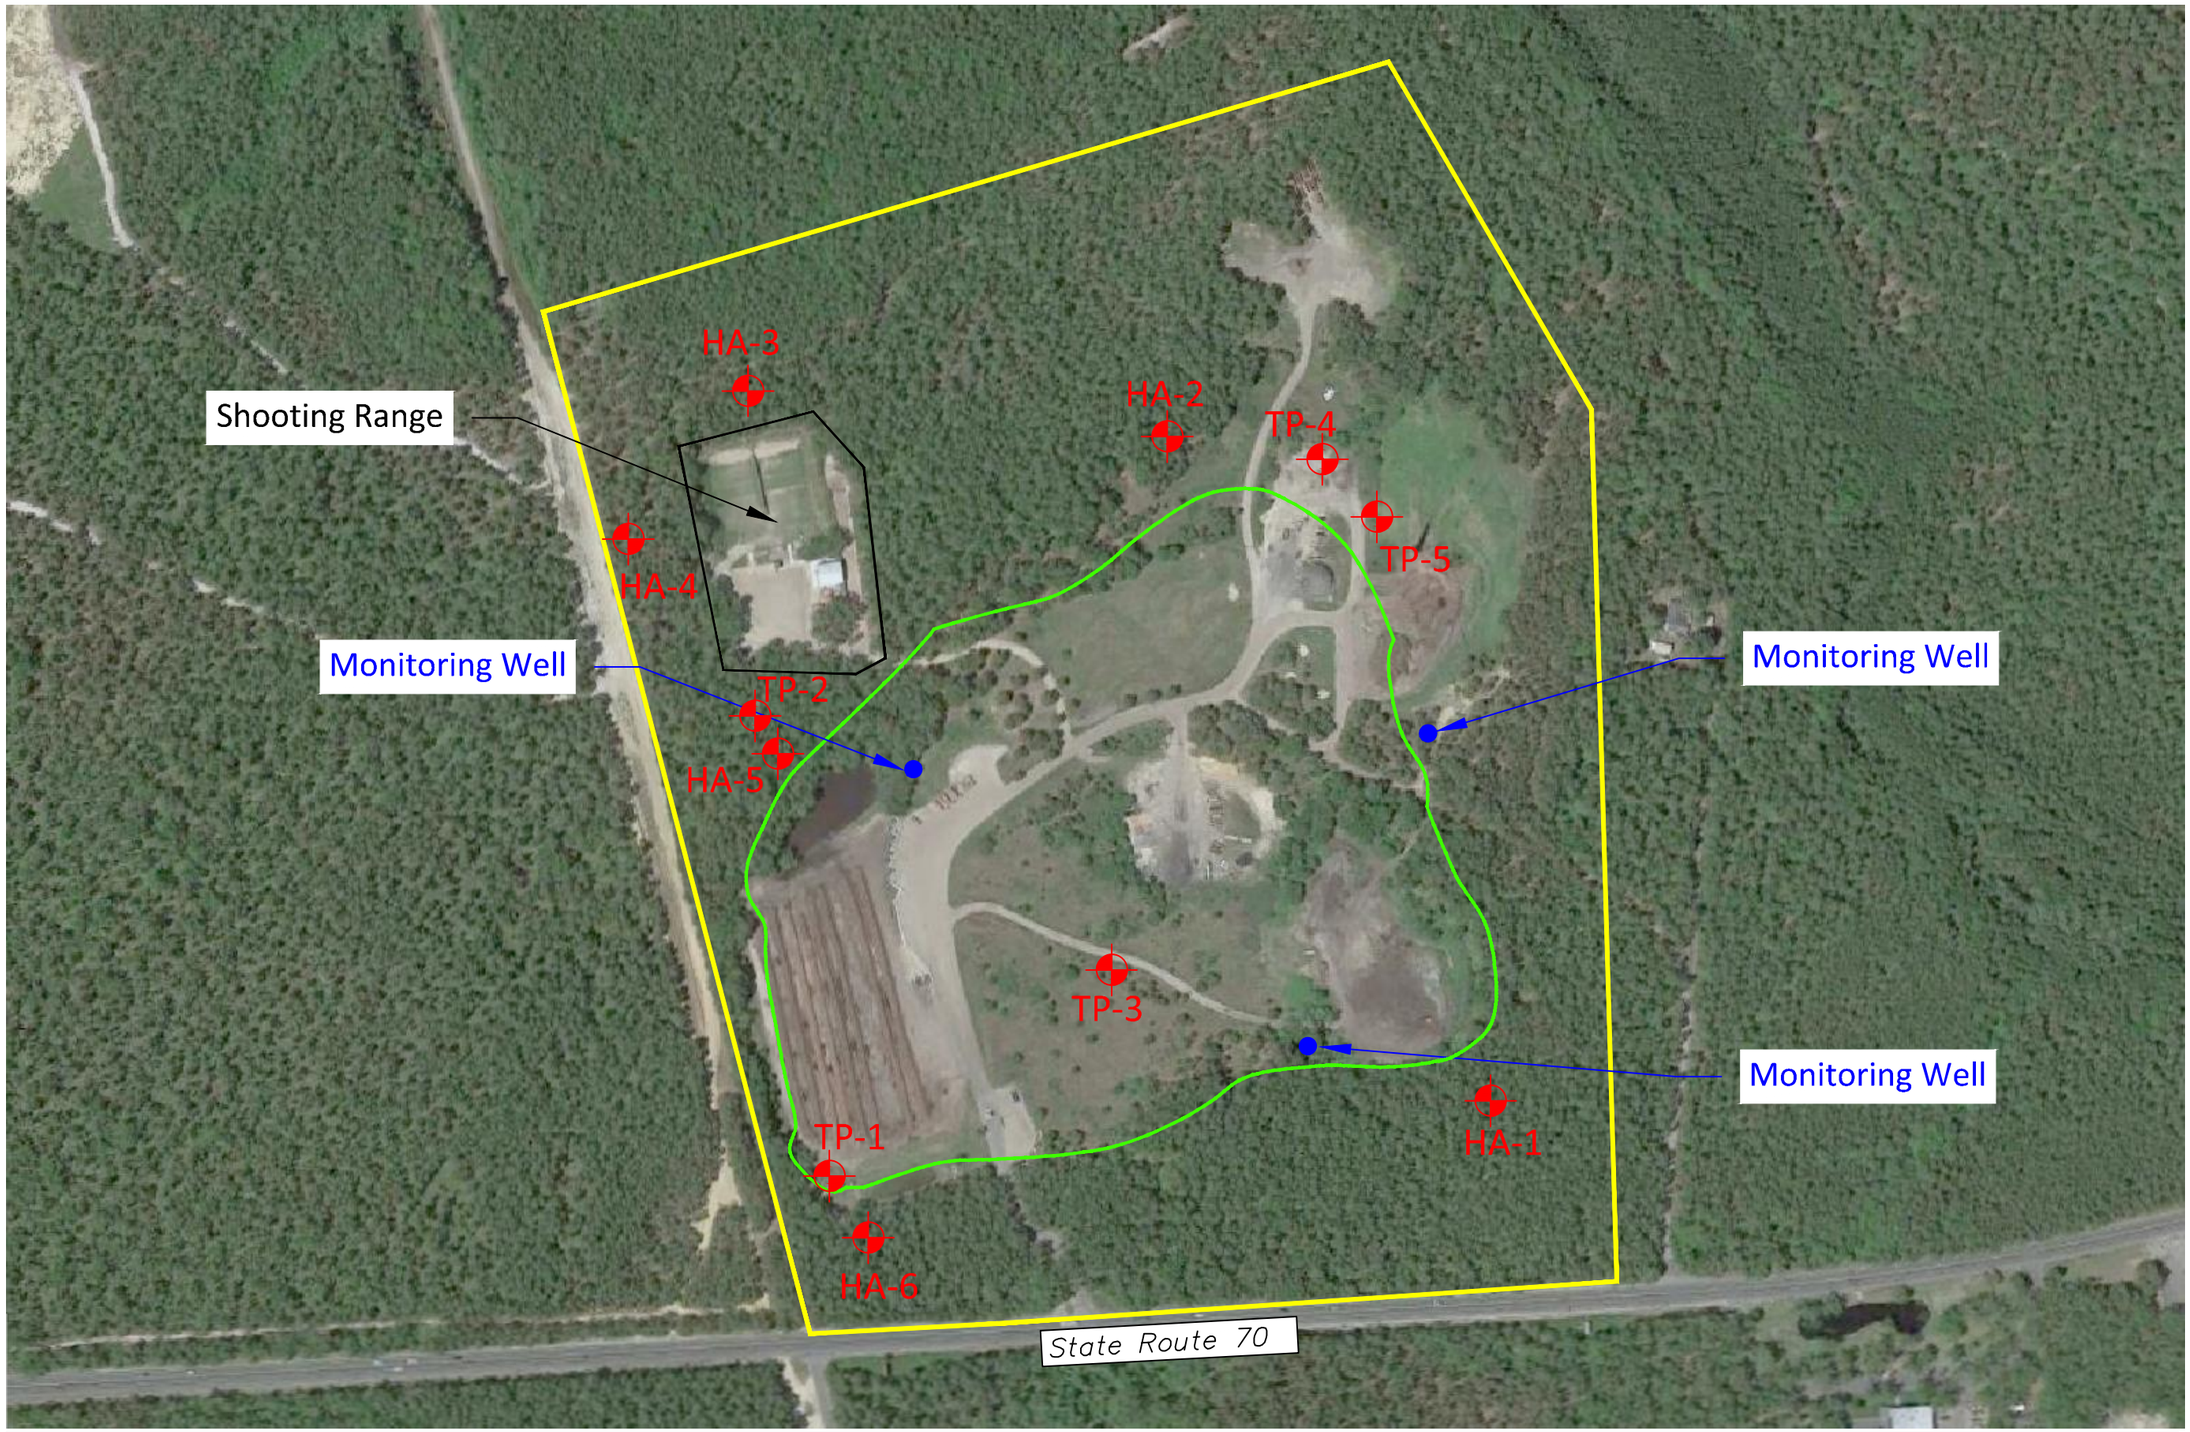
3.0 GEOPHYSICAL OBSERVATIONS

Geophysical results indicated a region on the subject property have subsurface anomalies representative of metal debris and materials associated with municipal waste and landfill materials. See enclosed Figure 1 outlining the area of delineated landfill materials using geophysical techniques and shallow exploration efforts in green. The area measures approximately 32 acres and is located in the central-east-central region of the subject property.

4.0 CONCLUSIONS

Maser Consulting completed a geophysical evaluation of the existing Whiting Recycling Center in the Township of Manchester, Ocean County, New Jersey. Using geophysical techniques in conjunction with ground-truth exploration, buried municipal landfill area was outlined as illustrated in green on the enclosed Figure 1 measuring approximately 32 acres.

If you have any questions or comments, or if we may be of further service, please do not hesitate to contact us.



Very truly yours,

EXECUTIVE SUMMARY

Maser Consulting (Maser Consulting), on behalf of the Township of Manchester ("the Township"), has prepared this Site Hydrogeologic Investigation Report (SHIR) for the property located at 110 Sam Pitts Road, Block 116, Lot 13 (1501 Route 70), Program Interest No. 132555. The subject property consists of 98.64 acres of land containing the former Manchester Township (a.k.a. Whiting) Landfill, the Police Department firing range, salt storage shed, composting site, and residents' recycling center. The Whiting Landfill comprises slightly less than 30 acres of the site. The property is located within the Pinelands Management area.

The Township desires to redevelop the former landfill portion of this under-utilized property with a ground mounted photovoltaic array (solar farm), and recently designated the site as an area in need of redevelopment. The Pinelands Commission also recently voted to certify the Township ordinance for the associated Redevelopment Plan. However, before construction can begin, the landfill must be properly closed, with minimal impacts to human and environmental receptors. To facilitate the SHI a minor landfill disruption application was submitted to the department in accordance with N.J.A.C 13.1E-1 et seq.

This SHIR was performed in general conformance with NJDEP guidance for landfill investigations under the Site Remediation and Solid and Hazardous Waste programs, and is meant to satisfy the NJ Pinelands Commission, which oversees development within the Pinelands.

RECEPTOR EVALUATION

An initial Receptor Evaluation (RE) is included with this report. Potential receptors include: a community wellhead protection area (WHPA) with a 12 year travel time, perennial stream Hurricane Brook and a tributary lying east and south of the site respectively, an area identified as potential vernal habitat in the northwest quadrant of the site, but outside the landfill boundary, and 1 individual supply well located east of the property. Potable well sampling performed at one community and one non community potable well forming the WHPA showed no tested contaminants above drinking water criteria for the most recent data available. The RE is included as **Appendix F**.

LANDFILL GAS

A perimeter landfill gas survey detected methane in the subsurface at several locations along the landfill perimeter. Since the water table intersects the ground surface between the landfill and any human receptors, no off-site receptors should be impacted. Existing structures and construction may be impacted by landfill gas, and a mitigation system may be warranted.

COVER THICKNESS

16 borings were advanced to a depth of 5' (i.e. one macrocore barrel length) across the former face of the landfill. Cover depths ranged from >5' to 4'. In no instance was less than four feet of cover material encountered. The cover fill consisted of native sands, silts and clays. Based on the extent of cover material, no additional fill should be necessary to regrade the site for installation of solar panels.

GROUNDWATER

The 4 existing monitoring wells have been periodically sampled by the Township for NJPDES parameters, although no NJPDES permit is in effect. Based on a review of the last 2 years of data, in conjunction with a recent full spectrum analysis (TAL\TCL+30 and leachate parameters), concentrations of several contaminants have been detected at the site. However, groundwater has been minimally impacted by the landfill, and in fact, contaminants may actually be attenuating beneath it.

1.0 INTRODUCTION

1.1 PROJECT SCOPE

Site Investigation/ Hydrogeologic Characterization:

Since the landfill was never properly closed, an SI was necessary to determine whether the landfill generated gas, the thickness and permeability of the existing cover, and to characterize the site hydrogeology.

Hydrogeologic Investigation

The hydrogeologic investigation was to consist of slug testing in the existing monitoring well network, following redevelopment. However, the wells had constrictions near the surface preventing introduction of the testing equipment, and restricted flow due to well age. As a result, data from nearby recently installed wells at the Manchester DPW were used to estimate groundwater velocity. Well construction and sampling data were used to prepare groundwater and contaminant concentration contour (isopleth) maps and cross sections. Cross sections were prepared illustrating site lithology down to the boring completion depths using gas boring and monitoring well logs, and are included as sections A-A', across dip, and B-B', along formation strike. Sections are shown on Figure 4, Appendix A.

Groundwater samples were collected using low flow methods, and analyzed for TAL\TCL+30, Chloride, Ammonia Nitrogen, Nitrate-Nitrogen and Sulfate.

1.2 SUMMARY OF RESULTS

Landfill Gas

Several areas of elevated landfill gas readings were recorded, shown on Figure 4. Historic reports indicate that the landfill received vegetative waste for most of its operating history, and exclusively since 1975. No PID responses were noted in any of the borings, nor were any odors or staining observed suspected of deriving from contaminated waste. Consequently, no samples were retained for analysis. No positive pressure was noted in the temporary well casings.

Cover Thickness

16 borings were advanced to a depth of 5' (i.e. one macrocore barrel length) across the former face of the landfill. Cover depths ranged from >5' to 4'. In no instance was less than four feet of cover material encountered. The cover fill consisted of native sands, silts and clays. Boring locations are shown on Figure 5, soil boring logs are included as Appendix C. Photographs of cores are included with the soil logs.

Groundwater

The groundwater showed one synthetic organic compound above the IIA Groundwater Quality Criteria (GWQC) of 0.2 ug/l, hexachlorobenzene, in the two most upgradient wells, MW 2 at 0.04 ug/l, and MW-3 at 0.03 ug/l/ Hexachlorobenzene is a semi-volatile compound that readily adheres to soil particles. It is a by-product of solvent manufacture, used in pesticides, and as a wood preservative. Several Polycyclic Aromatic Hydrocarbons were detected in MW-3, including benzo-a-anthracene, benzo-a-pyrene, and benzo-b-fluoranthene, similarly not expected to be mobile in groundwater. Several piles of waste lumber were observed at the surface in the vicinity of the MW. The occurrence of these compounds may derive from the expedited sampling schedule after redevelopment. Hexachlorobenzene isopleths are shown on Figure 7.

Iron, and Manganese were detected above the IIA GWQC in MW-2 and MW-3. Aluminum was detected in all wells above the IIA GWQC. These three metals are often naturally occurring at elevated concentration in Pinelands aquifers.

A broad suite of TAL metals was detected at concentrations below the IIA GWQC, but above the detection limits. The concentrations of these metals were generally higher in upgradient wells MW-2 and MW-3, with the exception of Sodium in MW-4, which was at 16600 ug/l, the highest concentration detected, but still below the GWQC of 50,000 ug/l. MW-4 is downgradient of the salt shed.

Leachate parameters Chloride, Ammonia, Nitrate, and Sulfate were all detected at concentrations below the IIA GWQC, and highest in upgradient well MW-2.

2.0 PHYSICAL SITE SETTING

2.1 GENERAL

The subject property is located at 110 Sam Pitts Road and Route 70 East, Township of Manchester, Ocean County, and is identified on the Manchester Township tax map as Block 116, Lot 13. United States Geological Survey (USGS) topographic quadrangle mapping , aerial photograph mapping, recent topography, and geologic cross sections for the subject property are provided as Figures 1, 2, 3, and 4 in **Appendix A**.

The subject property consists of 98.64 acres of relatively flat land, with a hummocky central area comprising the former landfill. Based on discussion with senior DPW staff familiar with operations, the landfill was the site of a former sand and gravel pit. Material was excavated to the water table (estimated at 25' by one individual), then backfilled with municipal solid waste. The waste was reportedly restricted to vegetative waste circa 1975.

2.2 SITE TOPOGRAPHY

The base elevation of the subject property is at 151 feet above sea level, rising to 169 feet above msl in the central part of the former landfill. The topography of the subject property is relatively flat, with average slopes of 10' over 275', or 3.6% .

2.3 SITE HYDROGEOLOGY

GEOLOGY

The site is mapped as the Cohansey Formation; an unconsolidated fluvial-near shore marine deposit of Mid Miocene age that forms the bulk of the water supply aquifer beneath the Pine Barrens. The major constituents of Cohansey Formation are described by the US Geologic Survey as "Unconsolidated > Coarse-detrital > Sand *(Bed)Sand, white to yellow with local gravel and clay. Sand is typically medium grained and moderately sorted although it ranges from fine to very coarse grained and from poorly to well sorted. Sand consists of quartz and siliceous rock fragments. Some beds are locally micaceous, and in the Lakehurst area, Ocean County, some beds have high concentrations of "black" sand (pseudorutile) that was once extensively mined. In general, the sand is crossbedded, although the style of crossbedding varies significantly with the paleoenvironment."*

Both the monitoring well logs and borings performed for this study confirm the above lithologic description. The monitoring well driller's logs noted sand with stones (gravel?), overlying more sand, then 5' of sandy clay, over 15' of sand to the completion depth of 50' in MW-1. MW-2 was reported to have sand and clay from 5-25', over sand to 45', MW-3 and MW_4 were reportedly all sand down to 45'. The static water level in each well was reported at 22' below ground surface when installed in 1985, which is a typical level of accuracy for a driller's log. Soil boring logs performed for this study gave additional detail, with several thinner (<1') clay layers identified.

GROUNDWATER

A review of water level measurements taken during quarterly sampling events since 2017 showed an average maximum gradient of 10' over 630' (MW-3 to MW-4), or a gradient of .016. Since the wells were installed in 1985, there was some suspicion that the local permeability was reduced due to iron bacteria fouling. Since Maser had installed monitoring wells approximately 2 years ago at the adjacent DPW site south of Route 70, in the same formation with similar lithology, it was determined that slug tests conducted in those wells would provide more representative results. Using the permeability from slug tests conducted in the monitoring well closest to the Landfill of 2.9 feet/day, the maximum gradient of 0.16, and assuming a porosity of 0.28 gives a flow velocity of 0.17 feet/day.

A sampling event conducted 9/16/2020 collected groundwater from all 4 wells using low flow methods. Summarized analytical results are included as Table 1. Historic summarized analytical results are included as Table 2. Water table contours from December and September, 2019 are presented as Figures 6 and 8.

3.0 SITE INVESTIGATION

3.1 TECHNICAL OVERVIEW

The SI was performed per NJDEP's March 2015 "Technical Guidance for Site Investigation of Soil, Remedial Investigation of Soil, and Remedial Action Verification Sampling for Soil" (version 1.2), modified to investigate landfill gas.

3.2 LANDFILL GAS INVESTIGATION

3.2.1 Soil Borings & Sample Collection – August 31 and September 1, 2020

A track mounted direct push hydraulic sampling rig (geoprobe) was used to commence with the perimeter gas investigation. A 5' long 2" diameter macro core barrel was used to collect soil samples continuously to the top of the water table, generally 20'-25' below ground surface. A geologist logged the core, screening it for potential contamination visually, and with a photoionization detector (PID). 15'-20' of 1" diameter slotted PVC well screen was inserted into the borehole and sealed at the surface with a gas-impermeable cap. Soil gas was allowed to accumulate for several minutes, after which an explosive gas probe was inserted to measure % Methane (CH4), Hydrogen Sulfide (H_2S), Carbon Dioxide (CO_2), and Oxygen (O_2. A photoionization detector (PID), was used to measure total concentration of volatile organic carbon compounds.

At the conclusion of the measurements, the screen was removed, and the borehole backfilled with cuttings and a bentonite slurry grout.

Following completion of the gas survey, 16 boreholes were advanced to determine landfill cover thickness, as shown on Figure 5. A 5' long 2" diameter macro core barrel was used to collect soil samples continuously to the top of waste, or 5', whichever was shallower.

A map of survey and thickness locations is provided as Figure 5 in **Appendix A**. A copy of the soil boring logs is provided in **Appendix B**.

3.2.2 Gas Survey Results

Methane (CH4) concentrations ranged from 0% at multiple locations to 19.5% immediately northeast and adjacent to composting facility. A summary of survey results by location is shown on Figure 5, **Appendix A**.

3.3 SOIL CAP THICKNESS

3.3.1 Soil Borings & Sample Collection – September 1 and 2, 2020

Immediately following the landfill gas survey, the same track mounted direct push hydraulic sampling rig (geoprobe) was used to commence with the cover thickness investigation. A 5' long 2" diameter macro core barrel was used to collect a soil core continuously to the bottom of the boring. A geologist logged the core, screening it for potential contamination visually, and with a photoionization detector (PID). A map of sampling locations is provided on **Figure 5, Appendix A**. A copy of the soil boring logs is provided in **Appendix B**.

3.3.2 Sample Results

A minimum of 4 feet of soil cover was encountered in all the borings. The cover soil consisted of silts, sands, and clay, apparently of local origin. No gas readings were observed.

4.0 GROUNDWATER INVESTIGATION

4.1 Groundwater Sampling

On September 9, a crew was mobilized to the site to redevelop the 4 existing monitoring wells. A surge block was introduced into each monitoring well, but encountered an obstruction near the surface. However, a 1.5" diameter submersible was able to reach the bottom of the wells. Each well was pumped for an hour, with no odors or sheens observed. The wells were unable to recharge sufficiently to keep a continuous flow.

On September 16, a technician from Eurofins Laboratories, Edison NJ (NJDEP Certification No. 12028) collected samples from each well using low flow methods. Samples were analyzed for the following:

- Target Analyte List\Target Compound List plus 30 peaks (TAL\TCL+30)
- Chloride
- Nitrogen – Ammonia
- Nitrogen – Nitrate
- Sulfate

In addition, the following field parameters were recorded:

pH,
Temperature,
Dissolved Oxygen
Conductivity

4.1.1 Sample Results

The groundwater showed one synthetic organic compound above the IIA Groundwater Quality Criteria (GWQC) of 0.2 ug/l, hexachlorobenzene, in the two most upgradient wells, MW 2 at 0.04 ug/l, and MW-3 at 0.03 ug/l. Hexachlorobenzene is a semi-volatile compound that readily adheres to soil particles. It is a by-product of solvent manufacture, used in pesticides, and as a wood preservative. Several Polycyclic Aromatic Hydrocarbons were detected in MW-3, including benzo-a-anthracene, benzo-a-pyrene, and benzo-b-fluoranthene, similarly not expected to be mobile in groundwater. The occurrence of these compounds may derive from the expedited sampling schedule after redevelopment, mobilizing particles in the wells.

Iron, and Manganese were also detected above the IIA GWQC in MW-2 and MW-3. Aluminum was detected in all wells above the IIA GWQC. These three metals are often naturally occurring at elevated concentration in Pinelands aquifers.

A broad suite of TAL metals was detected at concentrations below the IIA GWQC, but above the detection limits. The concentrations of these metals were generally higher in upgradient wells MW-2 and MW-3, with the exception of Sodium in MW-4, which was at 32500 ug/l, the highest concentration detected, but still below the GWQC of 50,000 ug/l. MW-4 is downgradient of the salt shed.

Leachate parameters Chloride, Ammonia, Nitrate, and Sulfate were all detected at concentrations below the IIA GWQC, and highest in upgradient well MW-2.

Groundwater pH was acidic, ranging from 5.2-4.8, which is typical for groundwater in the Pinelands.

A summary spreadsheet of analytical results is provided as **Table 1**. Complete laboratory deliverables are included in **Appendix E**.

5.0 RECEPTOR EVALUATION

5.1 ECOLOGICAL

A survey of receptors using the NJDEP Geoweb utility shows potential vernal habitat northwest of the site, but outside the landfill footprint. Two perennial streams, Hurricane Brook, on the eastern side of the landfill and a tributary to the south are downgradient of the landfill. No sensitive flora or fauna were identified via Geoweb.

5.2 HUMAN

The primary pathway for impacts to human receptors is via drinking water supplied by wells. Two public supply wells are located southeast of the site, and likely drive local groundwater gradients in their direction. Wellhead protection areas (WHPA) are shown on Geoweb, with 5-year capture zones extending to the site's southeastern border. Review of periodic water quality data collected from the two wells show no targeted contaminants above drinking water quality standards.

There are numerous shallow irrigation wells in the Cedar Glen community located south and southeast of the site. Since no targeted contaminants extend to these wells, no action is required.

A Receptor Evaluation map identifying receptors is included as Appendix F.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 LANDFILL GAS MIGRATION

The presence of landfill gas may require mitigation during the proposed redevelopment. The efficacy of venting should be evaluated as a mitigation measure.

6.2 LANDFILL COVER THICKNESS

The landfill cover thickness was determined to be no less than 4' in all borings. As such, there should be sufficient material available to regrade the site to incorporate stormwater best management practices. Following regrading, soil amendments or importation of topsoil capable of supporting vegetation may be required. A major landfill disruption application approval will be necessary to re-grade the site to support the Photovoltaic Array.

6.3 GROUNDWATER INVESTIGATION

The Pinelands Aquifer is classified as Class 1A, and subject to a non-degradation standard. Unfortunately, the presence of the landfill makes complete attainment of the standard unlikely. The presence of hexachlorobenzene above the IIA GWCQ should be investigated further. The complete absence of VOCs, Pesticides, and PCBs , and the reduction in contaminant concentrations in downgradient monitoring wells suggests that biological activity within the landfill may be degrading or sequestering contaminants. Leachate indicator parameters Chloride, Nitrogen Ammonia, Nitrogen – Nitrate, and Sulfate are only mildly elevated, with none exceeding the IIA GWQC.

The current cap appears to support the reduction of contaminants below concentrations that would potentially impact receptors. Maser recommends that periodic ground water sampling be continued to ensure no impacts occur.

OLD LT 19 - PINE BARRENS TRACT ON Tax A-87

Easement

The undersigned, Twp. of Manchester whose address is 1 Colonial Dr Manchester, NJ 08733 (the "Grantor"), is the owner of certain lands located in the Town of Manchester, County of Ocean State of NJ, known and designated as Block, 116 Lot 13, and recorded in The Office of The Clerk of Ocean County, On 3-28-74, in Deed Book 3377, page 633, referred to as the property.

Grantor, hereby grants and conveys to Grantee Jersey Central Power & Light Co. d/b/a GPU Energy and Verizon of New Jersey Inc., both New Jersey Corporations, (the "Grantee") for valuable consideration, the receipt of which is hereby acknowledged, and intending to be legally bound, has requested a permanent easement and uninterrupted right, from time to time, to construct, reconstruct, operate, inspect, renew, replace, improve, maintain, redesign, alter, relocate, extend and remove overhead, underground and ground level facilities described below (the "Facilities") as may be deemed necessary or convenient by Grantee for electric, CATV and communication purposes for the use and benefit of the Land and/or adjacent lands on, over, under and across along and beyond the property, the course of said facilities to run as follows:

This is for the right to set JC207268-40963 adjacent to and along the northerly side of Rte.70, on said property and in the bed of said street/road with the right to support said pole line with guys and anchors extending from said pole line onto said property.

The Facilities may include, without limitation, poles (with or without crossarms), guy wires, guy stubs, anchors, street lights and standards, transformers, transformer pads, switching compartments, conduits, conductors, ducts, wires, cables, fibers, pedestals, terminal boxes, manholes, hand-holes and other related equipment and apparatus from time to time deemed necessary or convenient by Grantee to accomplish the above purpose.

Grantor further grants and conveys to Grantee the right, from time to time, to trim, cut and/or remove such trees, tree branches, shrubs, roots, vegetation, structures and/or other objects or obstructions which in the sole judgment of the Grantee interfere with the installation of, or in the safe, proper or convenient use, maintenance, operation of, or access to, the Facilities including, without limitation, the removal of such trees, and/or tree branches which overhang or endanger any of the Facilities. Further, Grantee shall have the right to make such excavations to accomplish the above purposes and to enter upon the land without notice for all the purposes hereof.

Grantor covenants not to construct, place, maintain or use structures of any kind, or plant shrubs or trees within eight feet of either side of the center line of the underground Facilities, if any, as installed, raise or lower the ground elevation of the land above or beneath the Facilities; grow beneath overhead Facilities any vegetation or trees, except farm crops or other compatible species identified by Grantee; or obstruct access to, remove structural support from, divert or impound water to or on, or otherwise interfere with, the Facilities.

The rights and obligations hereunder shall be binding upon and inure to the benefit of the Grantor and Grantee and their heirs, executors, administrators, successors and assigns, Licensees and Lessees, as the case may be.

RESOLUTION

A RESOLUTION OF THE TOWNSHIP OF MANCHESTER, COUNTY OF OCEAN, STATE OF NEW JERSEY, AUTHORIZING THE EXECUTION OF A RIGHT-OF-WAY AGREEMENT WITH RESPECT TO BLOCK 116, LOT 13

WHEREAS, there is presently on file in the office of the Township Clerk a proposed form of Right-of-Way Agreement to be entered into with the Jersey Central Power & Light Company d/b/a GPU Energy, with respect to certain municipally owned premises designated as Block 116, Lot 13; and,

WHEREAS, the Township Council has reviewed the terms and conditions of the Right-of-Way Agreement aforesaid and is satisfied with same.

NOW, THEREFORE, BE IT RESOLVED by the Township Council of the Township of Manchester, County of Ocean, State of New Jersey, as follows:

1. That the Mayor is authorized to execute and the Clerk to attest to the proposed Right-of-Way Agreement aforesaid.

2. That the Township Clerk shall forward a certified copy of this Resolution to the following:

   A. The Mayor;
   B. Business Administrator;
   C. All parties of interest.

CERTIFICATION

I, **MARIE S. PELLECCHIA,** Clerk of the Township of Manchester, County of Ocean, State of New Jersey, do hereby certify the foregoing to be a true and correct copy of a Resolution adopted by the Township Council on the 19th day of December, 2000.

IN WITNESS WHEREOF, I have hereunto set my hand and seal of this Township this day of ,2000.

Re: Flood Hazard Area Verification-**Delineation of the Riparian Zone Only**
File No.: 1518-23-0002.1 LUP230001
Applicant: Manchester Township c/o Carl Block
Block(s) and Lot(s): [116, 13]
Municipality: Manchester Twp; County: Ocean

Dear Mr. Block:

This letter is in response to your request for a riparian zone only verification along Old Hurricane Brook at the above-referenced site. The Department has reviewed your application and hereby verifies the riparian zone limits on this site, as depicted on the approved plans described below.

The riparian zone extends 150 feet from the top of bank along both sides of the regulated water. If a discernible bank is not present along a regulated water, the riparian zone is measured in accordance with the definition of the top of bank at N.J.A.C. 7:13-1.2. This riparian zone width is due to T&E waters located within the same HUC-14 watershed.

Please note that altering land cover or topography in a flood hazard area, as well as clearing, cutting and/or removing vegetation within a riparian zone, is regulated by the Flood Hazard Area Control Act rules, and may be prohibited or restricted in some cases. A flood hazard area permit is required prior to undertaking any regulated activity within a flood hazard area or riparian zone described at N.J.A.C. 7:13-2.4. Some projects may qualify for a permit-by-rule at N.J.A.C. 7:13-7, a general permit by certification at N.J.A.C. 7:13-8, a general permit at N.J.A.C. 7:13-9, or an individual permit at N.J.A.C. 7:13-10. Projects situated entirely outside both the flood hazard area and riparian zone do not require a flood hazard area approval.

This verification is based on the best information presently available to the Department, and is subject to change if this information is no longer accurate or if additional information is made available to the Department including, but not limited to, information supplied by the applicant. **Please note that the Old Hurricane Brook at this location has an associated flood hazard area and/or floodway that is not verified as a part of this application.**

In accordance with section N.J.A.C. 7:13-5.3 (e), a person who is issued a verification pursuant to this subchapter shall be entitled to rely on the determination of the Department, concerning the presence, absence, or extent of flood hazard areas, riparian zones, or floodways for the term specified in this approval, unless the Department determines that the verification is based on inaccurate or incomplete information, in which case the Department may void the original verification and issue a new verification reflecting the actual conditions on the site. For example,

Book19512/Page477

NOTES

1. EXISTING TOPOGRAPHIC, PLANIMETRIC FEATURES, AND PROPERTY LINES SHOWN FROM ELECTRONIC FILE "MANCHESTER TOWNSHIP LOT CLEANUP.DWG" PREPARED BY COLLIERS ENGINEERING & DESIGN OF RED BANK, NEW JERSEY (COLLIERS) ON 15 OCTOBER 2021.
2. VERTICAL SITE DATUM IS IN FEET NORTH AMERICAN VERTICAL DATUM 1988 (NAVD88). HORIZONTAL DATUM IS NORTH AMERICAN DATUM 1983 (NAD 83) NEW JERSEY STATE PLANE.
3. LANDFILL BOUNDARY AND MONITORING WELL LOCATIONS FROM ELECTRONIC FILE PROVIDED BY COLLIERS ON 26 OCTOBER 2021. LANDFILL BOUNDARY BASED ON FIELD DELINEATION DESCRIBED IN MAURER CONSULTING P.A.'S 30 JANUARY 2020 LETTER REPORT "DELINEATION OF THE LANDFILL BOUNDARY."
4. OLD HURRICANE BROOK STREAM LOCATION FROM NATIONAL HYDROGRAPHY DATASET (NHD) BY U.S. GEOLOGICAL SURVEY (USGS). NORTH TRIBUTARY 1 AND NORTH TRIBUTARY 2 STREAM CENTER LINES AND DRAINAGE AREAS AND OLD HURRICANE BROOK TRIBUTARY DRAINAGE AREA FROM NEW JERSEY STREAMSTATS WEB TOOL BY U.S. GEOLOGICAL SURVEY.
5. THE REGULATORY FLOODWAY FOR OLD HURRICANE BROOK WAS BASED ON THE FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) FLOOD INSURANCE RATE MAP (FIRM) NO. 34029C0041G, EFFECTIVE 16 SEPTEMBER 2015.
6. UTILITY STAKES AND LOCATIONS ARE FOR REFERENCE ONLY. CONTACT NEW JERSEY ONE CALL FOR A UTILITY MARKOUT PRIOR TO INITIATING EARTH DISTURBING ACTIVITIES. CONFIRM AND FIELD LOCATE ALL UTILITIES.
7. EXISTING CONDITIONS MAY DIFFER FROM THAT SHOWN DUE TO SITE OPERATION ACTIVITIES PERFORMED AFTER THE DATE OF THE SURVEY.
8. EXISTING MATERIAL STOCKPILES ON LANDFILL TO BE REMOVED TO ESTABLISH A RELATIVELY UNIFORM GRADE INTO WHICH THE FINAL COVER SYSTEM MAY BE TIED. EQUIPMENT AND MATERIALS OWNED BY MANCHESTER TOWNSHIP SHALL BE REMOVED BY MANCHESTER TOWNSHIP PRIOR TO THE WORK.
9. WATER ACCESS ROAD TO EXISTING GAUGE OUTSIDE THE LANDFILL BOUNDARY AT A SLOPE NO GREATER THAN 10 PERCENT.
10. PAVING AND REQUIRED DRAFT LANDFILL GAS VENTS TO BE INSTALLED TO THE BOTTOM OF WASTE OR PREPARATION OF CLOSURE CONSTRUCTION DOCUMENTS. GAS VENT INSTALLATION DEPTHS TO BE SELECTED DURING
11. FINAL ESTIMATE OF THE COMPOSTING AND RECYCLING WILL BE DETERMINED BY MANCHESTER TOWNSHIP PRIOR TO CONSTRUCTION. FINAL COVER SYSTEM IN THE COMPOSTING AND RECYCLING OPERATIONS AREAS WILL BE A MINIMUM THICKNESS OF TWENTY FEET OF COMPACTED SOIL.
12. RIPARIAN BUFFER ZONES ARE 150 FEET WIDE (ARE THE AREA CONTAINS DOCUMENTED HABITAT FOR TIMBER RATTLESNAKE).
13. THE STATE OF NEW JERSEY HAS DETERMINED THAT ALL OR A PORTION OF THIS LOT LIES IN A FLOOD HAZARD AREA. CERTAIN ACTIVITIES IN FLOOD HAZARD AREA PIPE TRENCHES MAY BE REGULATED ON THIS SITE OR MAY FIRST REQUIRE A PERMIT. CONTACT WATERSHED & LAKE MANAGEMENT AT (609) 777-0844 FOR MORE INFORMATION PRIOR TO ANY CONSTRUCTION ONSITE.

FOR PERMIT DETERMINATION

DATE: MAY 2023	TITLE: FLOOD HAZARD AREA VERIFICATION SITE PLAN	Geosyntec consultants	DESIGN BY: MS						
PROJECT NO.: JS-0013.07	PROJECT: LANDFILL CLOSURE DESIGN		DRAWN BY: MAP						
FILE: JS0012.07 - C01	SITE: MANCHESTER TOWNSHIP LANDFILL MANCHESTER, NEW JERSEY		CHECKED BY: MS						
DRAWING NO.: 1 OF 1			REVIEWED BY: HKD/DS						
			APPROVED BY: TR						

the verification may be revised to reflect additional flood hazard areas or riparian zones identified after verification issuance; or if a threatened or endangered species habitat is disclosed or discovered after the verification was issued, the Department may correct the width of the riparian zone.

The approved drawing is prepared by Geosyntec Consultants, dated May 2023, unrevised, unless noted otherwise, and entitled:

"FLOOD HAZARD AREA VERIFICATION SITE PLAN, LANDFILL CLOSURE DESIGN, MANCHESTER TOWNSHIP LANDFILL, MANCHESTER, NEW JERSEY" sheet 1 of 1.

Within 90 calendar days of the date of this letter, the applicant shall submit the following information to the clerk of each county in which the site is located, and shall send proof to the Department that this information is recorded on the deed of each lot referenced in the verification:

1. The Department file number for the verification;
2. The approval and expiration dates of the verification;
3. The width and location of any riparian zone approved under the verification; and
4. The following statement: "The State of New Jersey has determined that all or a portion of this lot lies in a flood hazard area. Certain activities in flood hazard areas are regulated by the New Jersey Department of Environmental Protection and some activities may be prohibited on this site or may first require a permit. Contact Watershed & Land Management at (609) 777-0454 for more information prior to any construction onsite."

Failure to have this information recorded in the deed of each lot and/or to submit proof of recording to the Department constitutes a violation of the Flood Hazard Area Control Act rules and may result in suspension or termination of the verification and/or subject the applicant to enforcement action pursuant to N.J.A.C. 7:13-24.

A copy of this plan, together with the information upon which this boundary determination is based, has been made part of the Programs public records. Please note that this letter in no way legalizes any fill that may have been previously placed onsite, or any other regulated activities that may have previously occurred. Also this determination does not affect the applicant's responsibility to obtain any local, State or Federal permits that may be required, such as local building permits or freshwater wetlands approvals.

This verification is valid for five years from its issuance date and it can be transferred at the time of sale of a property to which the verification applies to a new owner pursuant to N.J.A.C. 7:13-22.4. Pursuant to N.J.A.C. 7:13-5.4(a), if the Department issues a verification for a site, and within five years issues a general permit authorization or an individual permit for a regulated activity that references or relies upon the verification at that site, the Department shall automatically reissue the verification upon approval of the permit or authorization so that the verification and permit or authorization have the same expiration date. This automatic reissuance shall occur only once per verification and there is no fee for this reissuance. The reissued verification shall reflect any alterations to the flood hazard area design flood elevation, flood hazard area limit and/or floodway limit that will result from the regulated activities authorized under the individual permit or general permit authorization. All pre-construction and post-construction elevations and limits shall be demarcated on drawings approved under the reissued verification.

In accordance with N.J.A.C. 7:13-23.1, any person who is aggrieved by this decision may request a hearing within 30 days after notice of the decision is published in the DEP Bulletin by writing to: New Jersey Department of Environmental Protection, Office of Legal Affairs, Attention: Adjudicatory Hearing Requests, Mail Code 401-04L, PO Box 402, 401 East State Street, 7th Floor, Trenton, NJ 08625-0402. This request shall include a completed copy of the Administrative Hearing Request Checklist. The DEP Bulletin is available through the Department's website at http://www.nj.gov/dep/ and the Checklist is available through the Program's website at http://www.nj.gov/dep/landuse/forms.html.

If you have any questions regarding this letter, please contact Andre Thompson by email at Andre.Thompson@dep.nj.gov or by phone at (609)322-9513. Please reference the Program's file number in all communication.

Sincerely,

Digitally Signed

SUPERIOR COURT OF NEW JERSEY
CHANCERY DIVISION
OCEAN COUNTY
DOCKET NO. C 3699-79

Civil Action

AMENDED FINAL JUDGMENT

THE TOWNSHIP OF MANCHESTER, County of Ocean, State of New Jersey, a municipal corporation,

Plaintiff,

vs.

JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife; ANN SILVERMAN; and STATE OF NEW JERSEY,

Defendants.

RECORDED
OCEAN COUNTY
CLERK'S OFFICE
JAN 28 10 03 AM '81
3978 PAGE 171
002933

This matter having been opened to the Court by Siegfried W. Steele, Esquire, attorney for the plaintiff, TOWNSHIP OF MANCHESTER; and it appearing that Summons and Complaint has been duly issued and returned served on the defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA

NO OTHER Final Judgment FOUND

3978-171

ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife; and ANN SILVERMAN;

And it further appearing that Notice and Complaint were duly issued and returned served on defendant, STATE OF NEW JERSEY;

And it further appearing that the defendants, ANN SILVERMAN and STATE OF NEW JERSEY having failed to file an answer or otherwise appear within the time limited by law in said cause, but have wholly failed to do so, and default having been entered against them;

And it further appearing that Edward F. Liston, Jr., Esq. of the firm of Carluccio & Liston, attorney for defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife, having filed an Answer and Counterclaim;

And it further appearing that an Affidavit has been duly presented proving the allegations of the Complaint and Counterclaim; and the court being of the opinion that a genuine dispute of title is in issue in this action; and the parties having amicably adjusted their dispute and conflicting claims of title;

and the parties by their respective attorneys, Edward F. Liston, Jr., Esq, and Siegfried W. Steele, Esq., having consented to the entry of this Judgment:

It is thereupon, on this 7th day of Jan, 1981 on Motion of Siegfried W. Steele, Esq., attorney for plaintiff, ORDERED and ADJUDGED that the defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife, have no estate, interest or right in, or lien or encumbrance upon the said lands and premises or any part thereof as more specifically set forth herein;

And it is FURTHER ORDERED and ADJUDGED that as to all of the lands and premises situate in the Township of Manchester, County of Ocean, and State of New Jersey, and more particularly described as follows:

BEG. AT A CONC MON. FD. IN THE NLY R/W LINE OF STATE OF N.J. HWY RTE. 70; SAID MON. ALSO BEING IN A ELY LINE OF FORT DIX MILITARY RESERVATION, THENCE

This Deed, made the 19TH day of ~~January~~ March 1974,

Between

CASEL AGENCY, Inc., a corporation of New Jersey, formerly known as Preferred Land Company

residing or located at in the of in the County of and State of herein designated as the Grantors,

And

TOWNSHIP OF MANCHESTER, a municipal corporation of the State of New Jersey

residing or located at 1 Colonial Drive, Lakehurst in the Township of Manchester in the County of Ocean and State of New Jersey herein designated as the Grantees;

Witnesseth, that the Grantors, for and in consideration of None-to clear a title question is the reason for this Deed.

lawful money of the United States of America, to the Grantors in hand well and truly paid by the Grantees, at or before the sealing and delivery of these presents, the receipt whereof is hereby acknowledged, and the Grantors being therewith fully satisfied, do by these presents remise, release and forever Quitclaim unto the Grantees forever,

All that certain tract or parcel of land and premises, situate, lying and being in the Township of Manchester in the County of Ocean and State of New Jersey, more particularly described as follows:

BEGINNING at a point in the Northerly line of New Jersey State Highway State #70 at the point of Intersection of said Northerly line with the Westerly line of a tract now or formerly Ocean County Land Company, said Westerly line being the line of a tract of 341 acres, before deductions, conveyed by John Karl, et als, to Ocean County Land Company, by deed dated August 15, 1910 and recorded at the Ocean County Clerk's Office March 1, 1911 in book 370 page 131, and from said beginning point running thence (1) North 9 degrees 42 minutes 25 seconds West 145.85 feet to a point thence (2) North 80 degrees East 1232.34 feet to a point thence (3) South 10 degrees East 381.80 feet to a point thence (4) South 84 degrees 32 minutes 43 seconds West 182.89 feet to a point in the Northerly line of N.J. State Highway Route #70 thence (5) along said Northerly line of N.J. State Highway Route #70 in a Westerly direction, 1073.86 feet to the point and place of beginning.

Containing 7.76 acres in accordance with survey by Ernst, Ernst, and Disenden, Engineers and Surveyors, dated June, 1972.

Due to a mislocation on the ground, lands in question are shown on map of Ocean County Land Company filed at the Ocean County February 28, 1911, file No. A-87, as a part of a tract of 54 acres known as the Pine Tavern tract. The Assessment Map of Manchester Township shows lands in question to be a part of said Pine Tavern tract and apparently has been assessed for many years as a part thereof.

Title to the Pine Tavern Tract was conveyed by Beachwood Park Co., Inc. by Arthur D. Herrick, sole surviving director and trustee, to Preferred Land Company, a New Jersey Corporation, by deed dated January 21, 1959 and recorded at the Ocean County Clerk's Office in Book 1955 page 59.

Casel Agency, Inc., a corporation of New Jersey, (Formerly known as Preferred Land Company), conveyed a ½ interest in said lands to William L. Tompkins and Jayne Tompkins, his wife, by deed dated August 14, 1961 and recorded in deed book 2165 page 165.

SUPERIOR COURT OF NEW JERSEY
CHANCERY DIVISION
OCEAN COUNTY
DOCKET NO. C 3699-79

Civil Action

AMENDED FINAL JUDGMENT

THE TOWNSHIP OF MANCHESTER, County of Ocean, State of New Jersey, a municipal corporation,

Plaintiff,

vs.

JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife; ANN SILVERMAN; and STATE OF NEW JERSEY,

Defendants.

RECORDED
OCEAN COUNTY
CLERK'S OFFICE
JAN 28 10 03 AM '81
3978 PAGE 171
002933

This matter having been opened to the Court by Siegfried W. Steele, Esquire, attorney for the plaintiff, TOWNSHIP OF MANCHESTER; and it appearing that Summons and Complaint has been duly issued and returned served on the defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA

NO OTHER Final Judgment FOUND

3978-171

ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife; and ANN SILVERMAN;

And it further appearing that Notice and Complaint were duly issued and returned served on defendant, STATE OF NEW JERSEY;

And it further appearing that the defendants, ANN SILVERMAN and STATE OF NEW JERSEY having failed to file an answer or otherwise appear within the time limited by law in said cause, but have wholly failed to do so, and default having been entered against them;

And it further appearing that Edward F. Liston, Jr., Esq. of the firm of Carluccio & Liston, attorney for defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife, having filed an Answer and Counterclaim;

And it further appearing that an Affidavit has been duly presented proving the allegations of the Complaint and Counterclaim; and the court being of the opinion that a genuine dispute of title is in issue in this action; and the parties having amicably adjusted their dispute and conflicting claims of title;

and the parties by their respective attorneys, Edward F. Liston, Jr., Esq, and Siegfried W. Steele, Esq., having consented to the entry of this Judgment:

It is thereupon, on this 7th day of Jan, 1981 on Motion of Siegfried W. Steele, Esq., attorney for plaintiff, ORDERED and ADJUDGED that the defendants, JOAN LAUBE and TULLIO LAUBE, husband and wife; CATHERINE SINISI and ARMAND SINISI, husband and wife; JOSEPH ROCCAFORTE and MARGHERITA ROCCAFORTE, husband and wife; SALVATORE ROCCAFORTE and ANGELINA ROCCAFORTE, husband and wife, have no estate, interest or right in, or lien or encumbrance upon the said lands and premises or any part thereof as more specifically set forth herein;

And it is FURTHER ORDERED and ADJUDGED that as to all of the lands and premises situate in the Township of Manchester, County of Ocean, and State of New Jersey, and more particularly described as follows:

BEG. AT A CONC MON. FD. IN THE NLY R/W LINE OF STATE OF N.J. HWY RTE. 70; SAID MON. ALSO BEING IN A ELY LINE OF FORT DIX MILITARY RESERVATION, THENCE

#22-093

RESOLUTION OF THE TOWNSHIP COUNCIL OF THE TOWNSHIP OF MANCHESTER, COUNTY OF OCEAN, STATE OF NEW JERSEY, APPROVING ACCEPTANCE AND EXECUTION OF THE FIRST AMENDMENT FOR LEASE AGREEMENTS WITH NEXTGRID MANCHESTER LANDFILL LLC

WHEREAS, the Township Council of the Township of Manchester, County of Ocean, State of New Jersey (hereinafter referred to as the "Township") has previously entered into a Land Lease Agreement ("Agreement") with NextGrid Manchester Landfill, LLC (hereinafter referred to as "NextGrid"); and

WHEREAS, the Lease Agreement is dated January 20, 2020, and pertains to the proper closure of the Township landfill and the instillation of solar panels on the landfill, all at the cost of NextGrid; and

WHEREAS, the original terms of the Agreement provided that the development period would commence on the effective date and terminate 12 months thereafter; and

WHEREAS, the Agreement provided that the effective date would be the date that the Agreement was fully executed by all parties; and

WHEREAS, pursuant to the plain language of the Agreement, the development period should have commenced, but because of environmental and regulatory issues, although diligently pursuing the approvals, NextGrid has not yet received all necessary approvals from NJDEP and the Pinelands Commission; and

WHEREAS, the Township acknowledges that although the development period expired on or about January 27, 2021, by its own terms and conditions, and was inadvertently not extended by agreement between NextGrid and the Township, furthermore the parties recognize that the project is ongoing and must be completed in order to provide for the best result for the taxpayers and citizens of the Township; and

NOW, THEREFORE, BE IT RESOLVED, this 14th day of February 2022, by the Township Council of the Township of Manchester, County of Ocean, State New Jersey as follows:

1. The Township agrees to amend the aforementioned Agreement to provide that Section 5(b) of the Agreement shall read:

   "The Development Period shall commence on the effective date and Terminate on the Lease Commencement date."

2. Other than as modified herein the Township reaffirms the Agreement dated January 20, 2020.

3. The Township authorizes and directs the Mayor and Municipal Clerk to execute any and all necessary documents in order to implement the intent of this Resolution.

BE IT FURTHER RESOLVED that a certified copy of this Resolution shall be forwarded by the Municipal Clerk to the following:

(a) The Honorable Robert Hudak, Mayor;
(b) Joan Brush, Council President;
(c) Brandon Umba, Township Administrator;
(d) Robert Mullin of Colliers Engineering;
(e) Jerry J. Dasti, Esquire;

CERTIFICATION

I, Sabina T. Martin, Clerk of the Township of Manchester, County of Ocean, State of New Jersey, do hereby certify the foregoing to be a true and correct copy of a Resolution adopted by the Township Council at a meeting held on the **24th day of January 2022**.

Sabina T. Martin, RMC
Municipal Clerk

FIRST AMENDMENT TO LAND LEASE AGREEMENT

This First Amendment to the Land Lease Agreement ("Amendment") is entered into as of December 14, 2021 ("Effective Date") by and among Town of Manchester NJ (the "Lessor") and NextGrid Manchester Landfill LLC (the "Lessee") (each a "Party" and together, the "Parties").

Recitals

WHEREAS, the Parties entered into that certain Land Lease Agreement on January 20, 2020 (the "Agreement"); and

WHEREAS, the Parties wish to amend provisions of the Agreement set forth below pursuant to Section 30 of the Agreement.

NOW, THEREFORE, in consideration of the premises and the mutual covenants contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

1. Capitalized Terms. Capitalized terms used herein without meaning shall have the meaning given to such terms in the Agreement.

2. Amendments.

   a. **Section 5(b)**: Substitute the section such that Section 5(b) shall state, "The Development Period shall commence on the Effective Date and terminate on the Lease Commencement Date."

3. Reaffirmation. Except as expressly amended by this Amendment, all other terms, covenants and conditions contained in the Agreement shall remain in full force and effect and are hereby ratified and confirmed in all respects.

4. Headings. The headings contained herein are solely for convenience of reference and shall not be deemed to have substantive meaning.

5. Counterparts. This Amendment may be executed in any number of counterparts and by different parties hereto in separate counterparts, each of which shall be deemed to be an original, but all of which taken together shall constitute one and the same agreement. Delivery of an executed counterpart of this Amendment by telefacsimile or electronic mail shall be equally as effective as delivery of an original executed counterpart of this Amendment.

6. Entire Agreement. The Agreement, as amended by this Amendment, constitutes the entire understanding and agreement between the parties hereto with respect to the subject matter hereof and supersedes any and all prior or contemporaneous agreements or understandings with respect to the subject matter hereof, whether express or implied, oral or written.

[Signature Page to Follow]

IN WITNESS WHEREOF, the Parties have executed this Amendment as of the date first above written.

SLOPE STABILITY ANALYSIS
MANCHESTER TOWNSHIP LANDFILL FINAL CLOSURE
MANCHESTER, NEW JERSEY

PURPOSE

The purpose of this calculation package is to evaluate slope stability of the post-closure conditions of the Manchester Township Landfill (Site) in Manchester, Ocean County, New Jersey. The analyses presented herein were conducted to evaluate slope stability of the following:

- Waste and final cover slopes at Section A-A′ and Section B-B′ (**Figure 1)**; and
- A Bin Block Wall to be constructed post landfill closure as part of the public recycling area.

Stability was evaluated for the static and seismic post-closure conditions in addition to sliding and overturning evaluation for the bin block wall.

SUBSURFACE STRATIGRAPHY

The Manchester Landfill comprises sand fill (fill) placed over a varying thickness of waste, which comprises various municipal solid wastes (MSW). The fill and waste overlie a stratum of native sand. Site stratigraphy and groundwater table conditions were inferred from *Site Hydrogeologic Investigation Report* (Maser 2020). The materials and material properties used in this analysis are presented below and summarized in **Table 1**.

Cover Soils

The cover system will comprise 18 inches of sand cover soil and 6 inches of topsoil. The unit weight of the cover soils was selected as 110 pounds per cubic foot (pcf) from a typical range for poorly graded sand from Coduto (2001). The shear strength of the cover soils is characterized by a friction angle of 30 degrees.

Waste

Shear strength properties of the waste were selected based on the bi-linear strength envelope for MSW presented by Kavazanjian et al. (1995). The unit weight of the waste was selected based on a typical value for MSW.

Based on the data presented in *Site Hydrogeologic Investigation Report* (Maser 2020) the bottom of the waste layer was selected to be approximately elevation 135 feet North American Vertical Datum 1988 (NAVD88) for this analysis. There is not sufficient information available to characterize the bottom of waste along the full cross-section evaluated. However, because the shallow slopes of the landfill preclude a deep critical failure surface and the strength of the waste and the underlying silty sand are expected to be relatively consistent, no significant precision is

gained from a more detailed characterization. In addition, since the landfill is unlined, interface friction considerations associated with lined landfills are not applicable.

Native Sand

Silty sand is the native soil existing below the waste. Engineering properties for this layer were selected from typical values in literature based on the descriptions provided in the *Site Hydrogeologic Investigation Report*.

The top of the silty sand coincides with the bottom of Waste (i.e., elevation 135 feet NAVD88).

Bin Blocks and Interface

The bin blocks are 3-ft x 3-ft reinforced concrete blocks that are interlocked together forming the retaining wall. The blocks are modelled with a unit weight of 150 pcf and an infinite strength, as the shear strength of the concrete is orders of magnitude larger than the soil and waste. The interface between the concrete blocks was estimated to have a friction angle of 35 degrees and the interface between the concrete blocks and the waste subgrade was estimated to have an interface friction angle of 20 degrees, based on typical values presented by NAVFAC (1971).

Granular Fill

The fill to be placed as a backfill for the bin block wall is expected to be compacted granular structural fill. The properties were selected based on typical values of compacted granular material (unit weight of 135 pcf, and a friction angle of 35 degrees), presented in **Table 1**.

Groundwater

Based on Maser 2020, the groundwater table elevation is at 138 ft NAVD88.

METHOD OF ANALYSIS

The factors of safety (FS) were evaluated using limit equilibrium theory and method of slices. The stability analyses were performed using the computer program SLIDE2®, Version 9.018 (Rocscience, 2022). SLIDE2 is a two-dimensional (2D) slope stability program for evaluating the FS of circular and non-circular failure surfaces in soils. The procedure consists of analyzing numerous potential failure surfaces to find the critical failure surface that results in the minimum FS for the slope. The specific method of slices used in this analysis is the Spencer method (Spencer, 1967), as both force and moment equilibrium are satisfied.

For evaluation of global stability, failure surfaces were set to have a minimum depth of 5 feet (ft) to avoid obtaining results that include surficial (i.e., localized) failures that were not likely to impair the overall structural stability. These failures can typically be corrected by routine maintenance activities and were therefore ignored.

Non-circular critical surfaces passing through the waste slopes and/or foundation soils were considered in static and seismic (i.e., pseudo static) analyses.

CROSS-SECTIONS ANALYZED

Slope stability was analyzed at two locations, Section A-A' and Section B-B', in addition to a third section describing a bin block wall constructed post landfill closure. The locations were selected on the following basis:

- Sections A-A′ and B-B′ were selected to evaluate the slope stability at the most critical sections of the landfill. These sections include areas with the highest cover grade (~3%) and also include the end slopes with a 3H:1V grade.
- Bin Block Wall which is proposed to be constructed on the landfill after closure to separate between the below grade dumpsters and the general grade of the recycling area.

A 750 pound per square foot (psf) distributed load, based on the estimated ground pressure of the solar energy system ballast blocks from previous similar projects, was modeled at the location of the proposed solar energy system. A 250 psf of the distributed load was modeled at the bin block wall section to account for vehicle traffic.

STABILITY CRITERIA

Pursuant to the requirements of New Jersey Administrative Code (NJAC) 7.26-2A and Resource Conservation and Recovery Act (RCRA) Subtitle D (258) (USEPA, 1995) the target design criteria for the Manchester Landfill slope stability are as follows:

- Static analysis shall provide a minimum factor of safety (FS) of 1.5; and
- Seismic (pseudo-static) analysis shall provide a minimum FS of 1.0 for a seismic event with a 10 percent probability of exceedance in 250 years (i.e., an approximate return period of 2,500 years).

SEISMIC LOADING

Seismic analyses were performed in general accordance with the recommendations outlined in the USEPA's guidance (USEPA, 1995). The horizontal seismic coefficient was selected based on a seismic event with a return period of 2,500 years, as summarized below.

- Bedrock Maximum Horizontal Acceleration ($MHA_{Bedrock}$) taken as 0.10g obtained from U.S. Geological Survey (USGS) 2014 National Seismic Hazard Map (**Attachment 1**).
- Soil Peak Horizontal Acceleration at Ground Surface (a_{max}) conservatively taken as the average between bedrock MHA and soft soil MHA. It is noted that the foundation soil consists predominantly of medium dense to very dense silty sand with gravel. Based on the soft soil MHA curve by Kavazanjian and Matasovic (1994) (**Attachment 1**), the soft soil MHA (MHA_{Soil}) is approximately 0.21g for a 2,500-year seismic event.

$$a_{max} = \frac{MHA_{Bedrock} + MHA_{Soil}}{2} = 0.16g$$

- Horizontal seismic coefficient (k_h) is taken as half of the soil peak horizontal acceleration at ground surface

$$k_h = 0.5 \times \frac{a_{max}}{g} = 0.5 \times \frac{0.16g}{g} = 0.08$$

ANALYSIS RESULTS

The output of slope stability analyses shows factor of safety above the minimum required for cross sections A-A′ and B-B′. The results of factors of safety and the minimum FS for global slope stability were calculated and summarized in **Table 2** and detailed output is included in **Attachment 2**. The factors of safety of the bin block section for global stablity, againist sliding and overtuning also exceed the minimum required factors of safety as summarized in **Table 3**. Detailed output is provided in **Attachment 2** for global stability and sliding analysis, and in **Attachment 3** for overtuning analysis.

CONCLUSIONS

Based on the analyses and calculations presented herein, the proposed design achieves the minimum required factors of safety for the loading conditions prescribed by the New Jersey regulations.

In addition to the New Jersey solid waste regulations, the design of the bin block retaining wall was reviewed against the New Jersey Uniform Construction Code (UCC) to address comments received from the New Jersey Department of Protection (NJDEP) during a pre-submittal review. Based on the site location, the retaining wall is classified as Sesimic Design Category A. Further, Section 1807.2.2 of the UCC defines the following for lateral soil loads:

> "Retaining walls shall be designed for the lateral soil loads set forth in Section 1610. For structures assigned to Sesimic Design Category D, E, or F, the design of retaining walls supporting more than 6 feet (1829 millimeter [mm]) of backfill height shall incorporate the additional seismic lateral eath pressure in accordance with the geotechnical investigation where required in Section 1803.2"

Since the retaining wall is classified as Sesimic Design Category A, there is no requirement to evaluate additional seismic lateral earth pressure for the retaining wall in accordance with Section 1807.2 of the UCC. Nonetheless, a review of the applicable design criteria was perfomed under the UCC and the factors of safety for the retaining wall were found to be above 1.1, as recommended by the NJDEP.

Geosyntec makes the following recommendations with respect to the construction of the landfill final cover system, solar energy system, and excavation of the borrow area.

- The landfill and cover soil borrow area shall be constructed with slopes, heights, etc. as shown on the Closure Design Drawings;
- Should the external loading on the landfill final cover system or the cover soil borrow area slopes (e.g., additional loading from the solar energy system, vehicle traffic, stormwater management features, etc.) differ from those shown in the Drawings or described herein, this analysis shall be revised to incorporate the changed conditions; and
- Should construction or additional investigation indicate that the subsurface conditions or mateiral properties are not consistent with those described herein, this analysis shall be revised to incorprate the changed conditions.

FINAL COVER SYSTEM SETTLEMENT ANALYSIS
MANCHESTER TOWNSHIP LANDFILL FINAL CLOSURE
MANCHESTER, NEW JERSEY

PURPOSE

The purpose of this calculation package is to evaluate the settlement of the proposed cover system at the Manchester Landfill (Site) in Manchester, Ocean County, New Jersey, relative to the slope requirements of New Jersey Administrative Code (NJAC) 7:26-2A7(i)(5).

The settlement of waste under the overburden or external (i.e., solar energy system) loading contributes to the potential settlement of the cover system and could result in an undesirable change in the final grades. Therefore, the main objective of this analysis is to estimate the settlement of the cover system and assess whether the design slopes are sufficient to provide adequate stormwater drainage and reduce the potential for differential settlement to affect the performance of the solar energy system.

SUBSURFACE STRATIGRAPHY

The subsurface stratigraphy comprises municipal solid waste (MSW) placed as a fill overlying the soil cover system placed over a varying thickness of waste, which comprises various municipal wastes (glass, timber, plastic, etc.). The cover soil and waste overlie a stratum of silty sand. Site stratigraphy and groundwater table conditions were inferred from *Site Hydrogeologic Investigation Report* prepared by *Maser Consulting* dated October 2020.

The materials and material properties used in this analysis are presented below and summarized in **Table 1**.

Waste

The unit weight of waste was selected based on a typical value for municipal solid waste (MSW). The selected modified compression index for waste is at the lower-middle range recommended by Qian et al. (2002) to account for the age of the waste (i.e., between approximately 40 and 48 years). The modified secondary compression index was selected as 0.05 times the modified compression index.

Since the waste relocated to achieve subgrade elevations will be compacted, only the volume change of the in-place thickness of waste is included in this settlement calculation.

As there is not sufficient information available to characterize the bottom of waste elevation along the full cross-section evaluated, therefore, the bottom of waste was assumed to be at a constant elevation. It is likely that closer to the landfill boundaries, the bottom of the waste is actually at a higher elevation, however, because the magnitude of settlement estimated using the assumption of a constant waste bottom is relatively small at the landfill boundaries, variations in the actual elevation of the bottom of waste is not expected to significant impact the settlement results and the use of a constant bottom of waste elevation is acceptable.

Sand

The sand is a native soil existing below the waste. The top of the sand coincides with the bottom of waste (i.e., elevation 135 feet NAVD88). Based on the characteristics of this sand layer and as the solar development will not appreciably increase the load on the foundations soils, it is expected that most of the induced settlement take place immediately. Therefore, this layer is excluded from settlement calculations.

Cover Soils

The cover system will comprise 18 inches of sand cover soil and 6 inches of topsoil. Some of the sand cover soil will be sourced from an onsite borrow area excavated in the sand stratum and the remaining cover soil will be sourced from an off-site borrow area.

Groundwater

Based on the "Revised Site Hydrogeologic Investigation Report" dated June 2022, the groundwater table elevation beneath the landfill is at elevation 138 ft NAVD88.

METHOD OF ANALYSIS

The locations of the settlement analyses are shown in **Figure 1**. Sections A-A′ and B-B′ were selected to evaluate settlement along the slope representative of the overall landfill conditions relative to drainage path length and variations in cut and fill.

Consolidation of the waste was estimated using equations developed for conventional one-dimensional consolidation theory used in geotechnical engineering. Consolidation is assumed to be caused by the following mechanisms:

- Primary (i.e., mechanical) compression of MSW due to surcharge (solar array) or subgrade fill placement.
- Secondary compression caused by biological degradation of organic material and/or creep, which is independent of loading.

It is assumed that the waste is normally consolidated, such that there is no recompression settlement from loading. The primary consolidation of waste is estimated using the following equation (after Qian, et al., 2002):

$$S_c = H_0 \times C'_c \times log \frac{\sigma'_{v0} + \Delta\sigma'_v}{\sigma'_{v0}}$$

Where

S_c = settlement due to primary consolidation (ft);

H_0 = initial thickness of the layer being evaluated (ft);

σ'_{v0} = initial effective vertical stress at the depth being evaluated (psf);

C'_c = modified compression index (compression ratio); and

$\Delta\sigma'_v$ = change in effective vertical stress at the depth being evaluated (psf).

The secondary compression of the waste is estimated with:

$$S_s = C'_\alpha \times H_0 \times log\frac{t_2}{t_1}$$

Where

S_s = settlement due to secondary compression (ft);

C'_α = modified secondary compression index (secondary compression ratio);

t_2 = time at the end of secondary compression (years) and

t_1 = time at the start of secondary compression (years).

The time to end of primary consolidation (t_1) was estimated to be 3 months with the time of interest for secondary consolidation (t_2) selected as 30 years, which is the typical end of post-closure care.

The total settlement at each analysis location is the sum of primary and secondary consolidation of the subgrade soils and the settlement of the waste:

$$S_{total} = S_c + S_s$$

The change in grade resulting from differential settlement is calculated as follows:

$$\Delta Grade\ (\%) = \left(\frac{\Delta S}{L}\right) \times 100\%$$

Where

ΔS = difference in settlement at two points of interest; and

L = horizontal distance between locations of interest.

A 750 pound per square foot (psf) distributed load is assumed at settlement locations over which the solar energy system would be constructed, based on the estimated ground pressure of the solar energy system ballast blocks. Note that while this load is consistent with the bearing pressure of the ballast blocks, application of the load as a uniform load (i.e., no stress distribution with depth) is conservative.

RESULTS

The results of the settlement analysis for section A-A' indicate a minimum post-settlement slope of 2.7% based on the proposed grades. However, results for section B-B' indicate that the proposed grades result in a minimum post-settlement slope of 1.6% percent between settlement points C and D on Section B-B′. While these slopes are below the minimum slope criteria set forth in NJAC 7:26-2A7(i)(5) (i.e., 3 percent), the slopes will still provide adequate stormwater drainage along primary drainage paths (i.e., perpendicular to the landfill slope), and therefore, is considered acceptable. Further, the results do not indicate excessive differential settlement along either Section A or Section B. Settlement calculations are provided in **Attachment 1**.

STORMWATER REPORT
MANCHESTER TOWNSHIP LANDFILL

Manchester Township, Ocean County, New Jersey

Prepared for

NextGrid Manchester Landfill, LLC, Inc.
177 Huntington Ave, Suite 1703
Unit 73069
Boston, Massachusetts 02115

Prepared by

Geosyntec Consultants, Inc.
1750 American Blvd, Suite 200
Pennington, New Jersey 08534

Project JR0312

June 2023, Revised November 2024, Revised March 2025, Revised May 2025

Geosyntec consultants

TABLE OF CONTENTS

1. INTRODUCTION 1
   1.1 Terms of Reference 1
   1.2 Site Background and Project Description 1

2. EXISTING AND PROPOSED CONDITIONS 3
   2.1 Existing Conditions 3
      2.1.1 Topography 3
      2.1.2 Site Soils and Geology 3
      2.1.3 Hydrogeology-Site Groundwater 3
      2.1.4 Impervious Cover 3
      2.1.5 Stormwater Management 4
   2.2 Proposed Conditions 4
      2.2.1 Topography 4
      2.2.2 Site Soils and Geology 4
      2.2.3 On-Site Infiltration Testing 4
      2.2.4 Hydrogeology-Site Groundwater 5
      2.2.5 Impervious Cover 5

3. STORMWATER MANAGEMENT 6
   3.1 Stormwater Management 6
   3.2 Green Infrastructure Standards (NJAC 7:8-5.3) 6
   3.3 Groundwater Recharge Standards (NJAC 7:8-5.4) 6
   3.4 Stormwater Runoff Quality Standards (NJAC 7:8-5.5) 7
   3.5 Stormwater Runoff Quantity Standards (NJAC 7:8-5.6) 8
      3.5.1 Calculation of Stormwater Runoff 8
      3.5.2 Groundwater Mounding Analysis 8
   3.6 Maintenance Requirements 9

4. SOIL EROSION AND SEDIMENT CONTROL 10

Engineer of Record:

Name:	Daniel H. Bourdeau, P.E. (N.J. 24GE04889700)
Mailing Address:	227 Willow Street, Suite 201 South Hamilton, MA 01982
Telephone Number:	(508) 472-9538
Email Address:	dbourdeau@geosyntec.com

I, Daniel H. Bourdeau, authorize that this report and the calculations presented herein were performed in accordance with the Stormwater Management Rules (N.J.A.C. 7:8).

Signature:

Date: May 22, 2025

Table 1. Pinelands Comprehensive Management Plan N.J.A.C 7:50-6.84(a)6 Cross Reference Table

Rule Number		Rule	Report Section(s) that address compliance with Rule
N.J.A.C. 7:50-6.84(a)6	ii(1)	Stormwater runoff rate and volumes shall be calculated in accordance with N.J.A.C. 7:8-5.7, except that the Rational Method for peak flow and the Modified Rational Method for hydrograph computations shall not be used.	Section 3.5 and Appendix B
	ii(2)	In calculating stormwater runoff using the NRCS methodology, the appropriate 24-hour rainfall depths as developed for the parcel by NOAA shall be utilized.	Appendix B
	iii(1)	There shall be no direct discharge of stormwater runoff from any point or nonpoint source to any wetland, wetlands transition area, or surface waterbody. Stormwater runoff shall not be directed in such a way as to increase the volume and rate of discharge into any wetland, wetlands transition area, or surface water body from that which existed prior to development of the parcel.	Section 3.5 and Appendix B
	iii(2)	To the maximum extent practical, there shall be no direct discharge of stormwater runoff onto farm fields.	N/A (no farm fields)
	iv(1)	The total runoff volume generated from the net increase in impervious surfaces by a 10-year, 24-hour storm shall be retained and infiltrated onsite.	Section 3.2 and Appendix B
	iv(5)(A)	The areal extent and amount of precipitation falling directly on or flowing over HPLAs and areas where stormwater is exposed to source material shall be minimized through the	Section 3.3.1

		use of roof covers, canopies, curbing or other physical means to the maximum extent practical.	
	iv(5)(B)	The stormwater runoff originating from HPLAs and areas where stormwater runoff is exposed to source material shall be segregated and prohibited from comingling with stormwater runoff originating from the remainder of the parcel unless it is first routed through one or more stormwater management measures required at (a)6iv(5)(C).	Section 3.3.1
	iv(5)(C)	The stormwater runoff from HPLAs and areas where stormwater runoff is exposed to source material shall incorporate stormwater management measures (can be multiple in series) designed to reduce the post-construction load of TSS by at least 90 percent in stormwater runoff generated from the water quality design storm established at N.J.A.C. 7:8-5.5(d) using one or more of the measures identified at (a)6iv(5)(C)(I) and (II).	Section 3.3.1
	iv(5)(C)(I)	Any measure designed in accordance with the New Jersey Stormwater Best Management Practices Manual to remove TSS must be constructed to ensure that the lowest point of infiltration within the measure maintains a minimum of two feet of vertical separation from the seasonal high water table.	Section 3.5, Appendix A and Appendix B
	iv(5)(C)(II)	Other measures certified by the Department of Environmental Protection, including a Media Filtration System manufactured treatment device with a minimum 80 percent removal of TSS as verified by the New Jersey Corporation for Advanced Technology.	N/A (no media filtration proposed)

	iv(5)(D)	If the potential for contamination of stormwater runoff by petroleum products exists onsite, the stormwater runoff from the HPLAs and areas where stormwater runoff is exposed to source material shall be conveyed through an oil/grease separator or other equivalent manufactured filtering device prior to being conveyed to the stormwater management measure.	Section 3.3.1
	iv(6)	Stormwater management measures shall be designed to achieve a minimum of 65 percent reduction of the postconstruction total nitrogen load from the developed site in stormwater runoff generated from the water quality design storm. The design of the site shall include green infrastructure in accordance with the BMP Manual and shall optimize nutrient removal. This may be achieved by using a singular stormwater management measure or multiple stormwater management measures in series.	Section 3.4 and Appendix B

1. INTRODUCTION

1.1 Terms of Reference

This Stormwater Report (SWR) has been prepared by Geosyntec Consultants, Inc. (Geosyntec) on behalf of NextGrid Manchester Landfill, LLC of Boston, Massachusetts (Developer) for the closure and solar array development at the Manchester Landfill located in Manchester Township, Ocean County, New Jersey (Site). This SWR has been developed in accordance with the New Jersey Department of Environmental Protection (NJDEP) regulations for stormwater promulgated by New Jersey Administrative Code (N.J.A.C.) 7:8 Stormwater Rules, N.J.A.C. 13:18A-1, the Pinelands Comprehensive Management Plan (CMP) dated January 14, 1981, and updated December 4, 2023, N.J.A.C. 7:26-2A.9 (solid waste regulations), and the *Technical Manual for Sanitary Landfill Permits and Approvals*, prepared by the Bureau of Landfill and Recycling Management – Division of Solid and Hazardous Waste, dated March 1999 (1999 Technical Manual).

1.2 Site Background and Project Description

The Manchester Township Landfill (landfill) occupies approximately 30 acres within Block 116, Lot 13 in Manchester, Ocean County, New Jersey. The property and the landfill are owned by Manchester Township. The landfill is surrounded by generally undeveloped forest, with New Jersey State Route 70 approximately 300 feet to the south and a residential property approximately 350 feet to the east.

Geosyntec (2023) presented a hydrogeologic framework update (Final Hydrogeologic Investigation Report) of the landfill pursuant to a request from the New Jersey Pinelands Commission regarding compliance of the proposed closure with the Pinelands CMP. The Final Hydrogeologic Investigation Report summarizes the field investigation procedures and results for evaluating the groundwater elevation, groundwater analytical testing, and surface water evaluation and presents conclusions regarding impacts to groundwater to support the proposed use of a permeable cover system to close the landfill. Based on the information in that report, the Closure Plan proposes a soil cap to close the landfill.

The Developer has executed a lease agreement with Manchester Township to close the landfill and develop a solar energy system on the landfill cover system. The Closure Plan has been prepared to include the construction and maintenance of a soil cover system.

Manchester Township has proposed the existing composting operation, public recycling facility, and deicing material storage structure (i.e., the salt shed) remain during or be returned to the landfill following closure as permanent post-closure uses. Based on pre-submission communications with NJDEP Division of Sustainable Waste Management (DSWM), the proposed post-closure uses are acceptable if the final cover system is designed and maintained to accommodate such uses.

As shown on the *Manchester Township Landfill Closure Permit Drawings*, dated March 2025 (Drawings), closure includes re-grading of the landfill, relocation of wastes within the landfill during re-grading, and installation of a permeable soil cover system. The limit of closure shown

on the Drawings was based on the results of a field investigation completed by Maser Consulting, P.A. (Maser) and presented in a January 2020 letter report (Landfill Delineation Report, Maser, 2020a).

The proposed closure includes re-grading of the Landfill, relocation of wastes encountered during re-grading, and installation of a permeable final cover system to the limits of the landfill. Per N.J.A.C. 7:26-2A.6(a), any sanitary landfill subject to the regulations pursuant to N.J.A.C. 7:26-2A.1(c), such as the Manchester Landfill, shall contain the necessary systems including a final capping system and stormwater management system. The Landfill closure requires a stormwater management system per N.J.A.C. 7:26-2A.7(g) to hydraulically isolate the sanitary landfill from surface water drainage in a controlled manner and protect the sanitary landfill from run-on and control run-off. The stormwater management system portion of the Manchester closure consists of diversion berms, culverts, sediment forebays, bioretention basins, and infiltration basins. All landfill closures, including permeable or impermeable cover systems, require stormwater and erosion control for the design of the landfill closure and long-term operation and maintenance of the landfill. To maintain the integrity of the landfill cover system, water shall be directed off of the landfill cover system in a non-erosive manner minimizing rills and gullies as required in N.J.A.C. 7:26-2A.7(i)(5). Stormwater runoff from the landfill cover system is completely retained on-Site and ultimately discharges into one of six infiltration basin that temporarily stores and infiltrates stormwater volume up to and including the projected 100-year, 24-hour design storm event.

2. EXISTING AND PROPOSED CONDITIONS

2.1 Existing Conditions

The pre-development hydrologic conditions evaluated in this SWR include the existing conditions based on an on-the-ground survey conducted in October 2021. Field observations, topographic survey, and aerial imagery were also used to characterize the existing hydrological conditions. In general, the existing Landfill area has been dormant for several years and is vegetated with grass. Undeveloped portions of the Site are considered to be covered by woods, brush, and grass. Other portions of the Site adjacent to the Landfill were previously developed and comprised of impervious cover, a composting facility, a salt storage shed, recycling drop off facility and various Manchester Township municipal facilities.

2.1.1 Topography

The existing landfill has one peak located approximately in the middle of the landfill area. Existing access roads are present throughout the landfill, with a larger existing composting area in the southwest portion of the landfill.

2.1.2 Site Soils and Geology

According to National Resource Conservation Service (NRCS) online mapping, soils beneath the former Landfill area are mapped as pits, sand and gravel (PHG), with some areas of Lakewood sand (LasB and LasC), waste substratum. These soils are well drained with very low runoff potential.

Based on site-specific investigations, native subsurface materials include white and tan fine sand, coarse sand in some intervals and little silt or clay.

There are no mapped wetlands on the landfill.

2.1.3 Hydrogeology-Site Groundwater

The hydrogeology at the Landfill is discussed in detail in a Hydrogeologic Report (Geosyntec 2023). According to the Hydrogeologic Report (Geosyntec 2023), seasonal high groundwater at the Site ranges from an elevation of 138 feet NAVD88 southwest of the landfill to 136 feet NAVD88 on the northeast perimeter of the landfill.

2.1.4 Impervious Cover

The impervious cover for the existing conditions is shown in Figure 3. Impervious cover within the Landfill boundary is limited to the asphalt pad and salt shed, and two small, paved sections of the access roads within Drainage Areas 2 and Drainage Area 3.

The following access roads and areas are considered “dirt” and are therefore not considered impervious cover:

- An access path from the southwest to the northeast bisecting the Landfill. The access path surface consists of cleared or unvegetated cover soils (i.e., dirt).

- An existing composting area.
- An existing material storage area and millings stockpile area located at approximately the center of the landfill.

It should be noted that much of the existing impervious cover (i.e., small paved sections of access paths, asphalt pad and salt shed area, etc.) were not previously approved by the Pinelands Commission. The existing impervious cover is included in the pre-development hydrology to accurately represent hydrologic conditions but is not considered as part of the water quality evaluation described below.

The existing conditions impervious cover area is 0.74 acres and does not include the dirt cover (9.54 acres).

2.1.5 Stormwater Management

Stormwater runoff from the existing landfill either infiltrates or drains via overland flow into one of two existing stormwater ponds. The stormwater ponds do not have outlets and appear to infiltrate runoff.

2.2 Proposed Conditions

The Post-Development hydrologic conditions evaluated in this stormwater report include the Landfill closure and solar array.

2.2.1 Topography

The closure of the Landfill will include regrading waste material and capping the Landfill to achieve the proposed grading plan shown on the Drawings. In general, the slopes of the Landfill will be graded at 3 percent. Elevations for the Landfill closure will range from 160 to 176 feet NAVD88. The proposed topography includes relocation of waste and placement of fill to achieve the proposed closure grades as well as a 2-foot thick, clean soil permeable cap.

2.2.2 Site Soils and Geology

The final cover system on the Landfill will consist of a permeable clean soil cover consisting of a sand/topsoil blend similar to the current surficial soil layer.

2.2.3 On-Site Infiltration Testing

In February 2023 and January 2025, Geosyntec performed soil profile pits and infiltration tests in the areas of the proposed stormwater basins (discussed in more detail in Section 3) to evaluate the soil stratigraphy and the infiltration rate of the soil stratum at the bottom of the proposed basin. The tests included a total of 17 infiltration tests performed in general accordance with the methodology presented in Subsection A6 of Chapter 12 of the New Jersey Stormwater Best Management Practices Manual. The infiltration test was selected over other infiltration tests due to its familiarity to the field team and to accommodate the sandy soils encountered.

The methodology and results of the on-site infiltration testing are presented in Appendix A.

2.2.4 Hydrogeology-Site Groundwater

The groundwater at the Site is not anticipated to be altered as result of the regrading of the existing soil cap and placement of additional fill and 2-foot-thick permeable soil cap. A groundwater mounding analysis was performed to evaluate localized impacts to groundwater from the proposed stormwater management features (described in Section 3.0). The results of the mounding analysis are presented as part of the Hydrologic and Hydraulic Calculation Package, included as Appendix B.

2.2.5 Impervious Cover

The impervious cover for the proposed condition is shown in Figure 4. Drivable impervious surface in the post-development condition includes an aggregate access road that bisects the landfill from south to north. The purpose of the access road is to service the solar array, provide access for maintenance of the clean soil cover system, and maintain accessibility to the recycling area, compost area, salt storage shed, and police firing range. Additional impervious areas include the composting area, recycling area, and the salt shed and associated asphalt pad. The proposed condition drivable impervious surface area is 0.544 acres. There is additional driving surface with a sandy cover (1.708 acres) near the firing range.

While the solar panels themselves are not considered impervious, the solar panel ballast blocks are considered impervious surface for evaluating the pre- versus post-development hydrology. This area is not included in the drivable impervious surface discussed above. The proposed solar panel ballast block area is 1.25 acres. The proposed condition impervious cover area used in the hydrology analysis is 6.705 acres, including the drivable impervious surface (not the sand area), ballast blocks, salt storage area, compost area, and recycling area. The surface area of the basins are also considered impervious to account for direct precipitation for the purposes of the stormwater analysis.

3. STORMWATER MANAGEMENT

3.1 Stormwater Management

The Landfill closure will consist of a 2-foot thick, clean soil cover vegetated with a native, drought tolerant grassland species. The clean soil cover system will be permeable and minimize the runoff volume from the cover system as compared to an impermeable geosynthetic or low permeable soil cover system. However, some increase in runoff is anticipated compared to the current condition as a result of the change in cover type (i.e., trees and brush to a maintained vegetated cover). This change in runoff will be managed through infiltration basins spaced along the perimeter of the landfill to meet the requirements of the drainage performance standards set forth in the New Jersey Solid Waste Regulations (N.J.A.C. 7:26-2A.7(g)). The infiltration basins will be located outside the limit of landfill and will be as close to the limit of landfill as possible to minimize land disturbance beyond the landfill footprint. Stormwater management necessary to support the Landfill closure consist of extended detention infiltration as there are no adjacent receiving waters or municipal separate storm sewer systems. The proposed stormwater management system is shown on the Drawings.

In general, stormwater runoff is collected in a series of diversion berms that convey runoff to infiltration basins spaced along the perimeter of the Landfill. The infiltration basins are sized to completely store the runoff volume associated with the projected 100-year, 24-hour storm event prior to infiltration. Drainage areas that include regulated motor vehicle (RMV) surface will flow to small-scale infiltration basins preceded by a pretreatment sediment forebay and bioretention basin sized to store the water quality design storm runoff event. Drainage areas without RMV surface will flow to large-scale infiltration basins preceded by a pretreatment sediment forebay only. The hydrologic and hydraulic calculations are included as Appendix B.

Run-on is prevented as the Landfill is more elevated than the surrounding land surface.

3.2 Green Infrastructure Standards (NJAC 7:8-5.3)

The small-scale infiltration basins onsite all have contributory drainage areas less than 2.5 acres. All area subject to Stormwater Runoff Quality Standards due to an increase in RMV surface will drain to a small-scale infiltration basin, which, combined with a pretreatment sediment forebay and bioretention basin, will comply with the Green Infrastructure Standards for both runoff quantity and quality. Areas onsite with no increase in RMV surface will flow to large-scale infiltration basins, which meet the Green Infrastructure Standards for runoff quantity and are not subject to a limit on contributory drainage area.

3.3 Groundwater Recharge Standards (NJAC 7:8-5.4 and N.J.A.C. 7:50-6.84)

The Site contains a landfill that is capped and subject to a closure plan; therefore, the Site is exempt from groundwater recharge standards as stated in N.J.A.C. 7:8(3)i. The infiltration basins designed as part of the stormwater management system are located outside the limit of waste and are not within the limits of the landfill.

3.3.1 High Pollutant Loading Areas (N.J.A.C. 7:8-5.4(b)3 i and ii and N.J.A.C. 7:50-6.84(a)6iv5 et seq.)

Post-Development conditions include a relocated road salt storage area, which is identified on Drawing Number 4 of the Drawings. All road salt will be contained within an enclosed dome structure on an asphalt surface. Rainfall will not come into direct contact with road salt. The salt storage area will be located within the up-gradient portion of its subcatchment. The salt storage area will not be exposed to stormwater run-on from other areas of the landfill. Stormwater runoff from the dome of the salt shed and asphalt around the dome will flow down the slope onto the vegetated final cover system and into Basin 4, which consists of a sediment forebay, bioretention cell and small-scale infiltration basin. The salt underneath the dome will not comingle with stormwater runoff as it will be completely enclosed. During the Water Quality Design Storm, stormwater runoff from the dome of the salt shed and the asphalt around the salt shed will be treated by the bioretention basin. The basin consists of a 48" soil layer with terrestrial forested-type vegetation (Detail 20 on Drawing Number 10 of the Drawings). This combination of soil depth and vegetation type results in a 90% TSS removal rate based on Chapter 9.7 of the New Jersey Stormwater Best Management Practices Manual (NJDEP 2004). No potential for contamination of stormwater runoff by petroleum products exists at the salt storage area.

3.4 Stormwater Runoff Quality Standards (NJAC 7:8-5.5)

Figure 4 shows the RMV surface for the Post-Development conditions (included in the impervious cover areas). The Pre-Development condition does not contain any RMV surface as it was not previously permitted. Table 2 compares the pre- and post-development RMV surface areas. Based on an evaluation of pre-development (0.000 acres[1]) and post-development (2.252 acres), there is a net gain of 2.252 acres of regulated motor vehicle surface. The proposed development results in an increase or one-quarter acre or more of RMV surface; therefore, the stormwater runoff quality standards are applicable per N.J.A.C. 7:8-5.5(a).

Table 2. Pre-Development and Post-Development RMV Surface

	Pre-Development Area	Post-Development Area	Difference
RMV Surface Area (acres)	0.00	2.252	+2.252

Furthermore, the Pinelands CMP requires for all major developments that stormwater management measures be designed to achieve a 65% reduction of the post-construction total nitrogen load from the developed site in stormwater runoff generated from the water quality design storm.

Three types of BMPs are proposed to meet this requirement. The first is using infiltration basins to capture and infiltrate stormwater runoff from the landfill including the NJDEP Water Quality Design Storm to provide 50 percent nitrogen reduction. The second is use of vegetative filter strips

[1] As the previous impervious cover was not permitted, it is not considered regulated motor vehicle surface area.

(i.e., the meadow cover) to provide an additional 30 percent nitrogen removal for Drainage Areas 1A and 2B, which do not contain RMV surface. For the remaining drainage areas, bioretention basins will be used to provide the additional nitrogen removal. The bioretention basins are designed to treat the NJDEP WQDS and provide additional 30 percent nitrogen reduction. The bioretention basins will be located between the sediment forebays and the infiltration basins; stormwater volume greater than the WQDS will be routed directly from the sediment forebays to the infiltration basins to prevent erosion and other adverse impacts to the bioretention basins.

3.5 Stormwater Runoff Quantity Standards (NJAC 7:8-5.6)

Compliance with the stormwater runoff quantity standards described at NJAC 7:8-5.6 and comparison of pre- and post-development hydrology was evaluated for three drainage areas in the existing condition and six drainage areas for the proposed condition. The hydrologic and hydraulic analysis demonstrates compliance with the runoff quality standards and is included as Appendix B. The hydrologic analysis within this package shows that the overall post-development condition peak discharges from the Landfill with proposed stormwater management features (i.e., infiltration basins) are less than the pre-development peak discharges under the current and projected 2-, 10-, and 100-year, 24-hour design storms. It should be noted that the proposed stormwater management features have been sized to completely store the runoff volume associated with the projected 100-year, 24-hour storm event prior to infiltration.

The analysis, along with the proposed stormwater features described in Section 3.4, demonstrate that the proposed landfill closure and solar development plan will not result in an increase in peak discharge rates from the Site, in accordance with the stormwater management requirements of N.J.A.C. 7:8-5.6(b)2 (N.J.A.C. 2020) and the New Jersey Sanitary Landfill Technical Manual (NJDEP 1999).

3.5.1 Calculation of Stormwater Runoff

The hydrologic model input/output analysis is included with Appendix B and describes the calculation of stormwater runoff. The pre-development and post-development conditions were modeled under the current and projected 2-year, 10-year, and 100-year, 24-hour design storms to demonstrate compliance with the New Jersey Stormwater Runoff Quantity Standards N.J.A.C. 7:8-5.6(b)2 (N.J.A.C. 2020) and with the Pinelands Comprehensive Management Plan Runoff Quantity Standards N.J.A.C. 7:50-6.84(a)6ii(1), ii(2), and iii(1).

3.5.2 Groundwater Mounding Analysis

The groundwater mounding analysis is included as part of the Hydrologic and Hydraulic Calculation Package as Appendix B and describes the groundwater mounding impacts for the infiltration basins. The estimated mounding elevation for the infiltration basins are below the bottom elevations of the basins, and there are no nearby structures affected by groundwater mounding; therefore, no negative impacts are anticipated as a result of the infiltration basins.

3.6 Maintenance Requirements

Appendix C includes the Operation and Maintenance Plan for the proposed stormwater management features at the Site. The stormwater management structures, including grass-lined and riprap-lined diversion berms, sediment forebays, bioretention basins, infiltration basins, energy dissipation aprons, and the access road culverts should be inspected at least annually for cracking, subsidence, spalling, erosion, and deterioration (NJDEP 2004). We recommend that stormwater management structures be inspected at least twice per year.

Sediment/debris removal shall take place when the stormwater management structures are dry and should not disturb the riprap or grass lining. Debris, trash, sediment, and other waste should be disposed of at a suitable disposal/recycling facility and in accordance with all applicable local, state, and federal waste regulations (NJDEP 2004). The closure system shall be maintained in accordance with the Closure Plan's operation and maintenance requirements.

The cover system vegetation and cover soils will be inspected annually to identify areas of dead or sparse vegetation, erosion, cracks, or slope movement. Repair of erosion rills and other maintenance to the slopes will be performed as necessary to ensure stable top- and side slopes. If sparse vegetation or erosion is observed during the inspection, the cover system will be repaired as soon as feasible in accordance with the design specifications. Because there is no geomembrane or specific drainage layer component of the cover system, vegetation will not be limited to any specific height, nor will the vegetation require any specific mowing schedule, other than as needed to maintain adequate performance of the solar energy system (i.e., to prevent shading of the solar panels). Specific measures and schedule for maintenance will be documented in the closure and post-closure care plan to be submitted to DSHW.

Manchester Township and the Developer will be jointly responsible for maintenance of the cover system and the stormwater management structures on the Site and for documentation of inspection and maintenance, including the development of a maintenance log sheet. Corrective or preventative maintenance and inspections should be documented, including copies of maintenance-related work orders.

4. SOIL EROSION AND SEDIMENT CONTROL

The construction of the landfill closure will require erosion and sediment controls during earth-disturbing and closure activities and development of the solar array. A Soil Erosion and Sediment Control Plan has been prepared and is included in the Drawings. Perimeter control silt fence will be installed prior to earth-disturbing activities along the limit of work of the proposed closure areas. A stabilized construction entrance will be used at construction exit to reduce the potential for track out. The Contractor will also sweep the construction exit areas to reduce the potential of track out off-Site. Temporary stabilization including mulch and erosion control blanket will be used to temporarily stabilized exposed areas and establish vegetation. Stockpiles will be located in designated material stockpile areas on-Site. Temporary perimeter controls will be installed down gradient of designated stockpile areas. Final stabilization will consist of permanent seeding of the closure areas.

NOTES:

1. EXISTING MATERIAL STOCKPILES ON LANDFILL TO BE REMOVED TO ESTABLISH A RELATIVELY UNIFORM GRADES INTO WHICH THE FINAL COVER SYSTEM MAY BE TIED. EQUIPMENT OWNED BY MANCHESTER TOWNSHIP WILL BE REMOVED BY MANCHESTER TOWNSHIP PRIOR TO THE WORK.
2. MATCH ACCESS ROAD TO EXISTING GRADE OUTSIDE THE LANDFILL BOUNDARY AT A SLOPE NO GREATER THAN 10 PERCENT.
3. PASSIVE AND INDUCED DRAFT LANDFILL GAS VENTS TO BE INSTALLED TO THE BOTTOM OF WASTE OR GROUNDWATER TABLE, WHICHEVER IS HIGHER. ACTUAL INSTALLATION DEPTHS TO BE SELECTED DURING PREPARATION OF CLOSURE CONSTRUCTION DOCUMENTS.
4. FINAL EXTENTS OF THE COMPOSTING AND RECYCLING AREAS WILL BE DETERMINED BY MANCHESTER TOWNSHIP PRIOR TO CONSTRUCTION. FINAL COVER SYSTEM IN THE COMPOSTING AND RECYCLING OPERATIONS AREAS WILL BE A MINIMUM THICKNESS OF THREE FEET OF COMPACTED SOIL (DETAIL 2 ON DRAWING 7).
5. SECURITY BOOTH AND SURROUNDING ASPHALT PAVEMENTS WILL REMAIN DURING CLOSURE CONSTRUCTION AND POST-CLOSURE OPERATION. FINAL COVER SYSTEM WILL BE MATCHED TO THE EXISTING ELEVATIONS AT THE EDGE OF THE ASPHALT PAVEMENT.
6. EXISTING LIDAR TOPOGRAPHY DATA FROM USGS LIDAR POINT CLOUD DATA PUBLISHED 11 SEPTEMBER 2014 WITH METADATA UPDATED 12 APRIL 2023 FROM USGS NATIONAL MAP DATA DELIVERY, GIS DATA DOWNLOAD, RECEIVED 31 OCTOBER 2024.
7. INTERPRETED LIMIT OF WASTE BASED ON RESULTS OF PRE-DESIGN INVESTIGATION. TO THE EXTENT ALLOWABLE DURING CONSTRUCTION, DEVELOPED AREAS BETWEEN INTERPRETED LIMIT OF WASTE AND LANDFILL FINAL COVER SYSTEM WILL REMAIN WITH ANY DISTURBED AREAS BEING RESTORED TO PROVIDE EQUAL OR BETTER WASTE COVER AND STORMWATER DRAINAGE THAN PRE-CONSTRUCTION CONDITIONS.
8. INTERPRETED LIMIT OF WASTE BASED ON RESULTS OF PRE-DESIGN INVESTIGATION. WASTE ENCOUNTERED DURING THE EXCAVATION OF THE BORROW AREA WILL BE RELOCATED UNDER THE FINAL COVER SYSTEM. WASTE WILL BE IDENTIFIED BASED ON VISUAL OBSERVATIONS.
9. RIPRAP LINING SHALL BE INSTALLED A MINIMUM OF 10 FEET UPSTREAM AND DOWNSTREAM OF THE BENDS IN DIVERSION BERMS.

INFILTRATION TESTING

Appendix A.1
Test Location Plan

Test Pit Location Map

FOR REVIEW PURPOSES ONLY
DESIGN DRAWINGS - NOT FOR CONSTRUCTION

NOTES:

1. EXISTING MATERIAL STOCKPILES ON LANDFILL TO BE REMOVED TO ESTABLISH A RELATIVELY UNIFORM GRADES INTO WHICH THE FINAL COVER SYSTEM MAY BE TIED. EQUIPMENT OWNED BY MANCHESTER TOWNSHIP WILL BE REMOVED BY MANCHESTER TOWNSHIP PRIOR TO THE WORK.
2. MATCH ACCESS ROAD TO EXISTING GRADE OUTSIDE THE LANDFILL BOUNDARY AT A SLOPE NO GREATER THAN 10 PERCENT.
3. PASSIVE AND INDUCED DRAFT LANDFILL GAS VENTS TO BE INSTALLED TO THE BOTTOM OF WASTE OR GROUNDWATER TABLE, WHICHEVER IS HIGHER. ACTUAL INSTALLATION DEPTHS TO BE SELECTED DURING PREPARATION OF CLOSURE CONSTRUCTION DOCUMENTS.
4. FINAL EXTENTS OF THE COMPOSTING AND RECYCLING AREAS WILL BE DETERMINED BY MANCHESTER TOWNSHIP PRIOR TO CONSTRUCTION. FINAL COVER SYSTEM IN THE COMPOSTING AND RECYCLING OPERATIONS AREAS WILL BE A MINIMUM THICKNESS OF THREE FEET OF COMPACTED SOIL AND AGGREGATE (DETAIL 2 ON DRAWING 7).
5. SECURITY BOOTH AND SURROUNDING ASPHALT PAVEMENTS WILL REMAIN DURING CLOSURE CONSTRUCTION AND POST-CLOSURE OPERATION. FINAL COVER SYSTEM WILL BE MATCHED TO THE EXISTING ELEVATIONS AT THE EDGE OF THE ASPHALT PAVEMENT.
6. EXISTING LIDAR TOPOGRAPHY DATA FROM USGS LIDAR POINT CLOUD DATA PUBLISHED 11 SEPTEMBER 2014 WITH METADATA UPDATED 12 APRIL 2023 FROM USGS NATIONAL MAP DATA DELIVERY, GIS DATA DOWNLOAD, RECEIVED 31 OCTOBER 2024.
7. INTERPRETED LIMIT OF WASTE BASED ON RESULTS OF PRE-DESIGN INVESTIGATION. WASTE ENCOUNTERED DURING THE EXCAVATION OUTSIDE THE INTERPRETED LIMIT OF WASTE WILL BE RELOCATED UNDER THE FINAL COVER SYSTEM. WHERE COMPLETE WASTE REMOVAL IS NOT FEASIBLE, REMAINING WASTE SHALL, AT THE DISCRETION OF THE ENGINEER AND NJDEP, BE LEFT IN PLACE AND CAPPED WITH A MINIMUM OF 2 FEET OF CLEAN SOIL. WASTE WILL BE IDENTIFIED BASED ON VISUAL OBSERVATIONS.
8. RIPRAP LINING SHALL BE INSTALLED A MINIMUM OF 10 FEET UPSTREAM AND DOWNSTREAM OF THE BENDS IN DIVERSION BERMS.
9. DESIGN OF THE SALT SHED ASPHALT PAVEMENT AND STORMWATER CONTROLS TO BE PREPARED SEPARATELY BY MANCHESTER TOWNSHIP.

Manchester Township Landfill

Landfill Closure Stormwater Management Hydrology and Hydraulics Calculation Package

PURPOSE

The purpose of this calculation package is to present the methodology, assumptions, calculations, and results of the hydrologic and hydraulic analyses associated with managing stormwater from the proposed landfill closure and solar array at the former Manchester Township landfill in Manchester Township, Ocean County, New Jersey (the Site). The Site is approximately 99 acres, and the landfill occupies approximately 30 acres of the Site. The landfill is no longer in use, but the Site is used for other municipal activities including a police shooting range, recycling, yard waste compost drop off and storage, and storage of salt and equipment. The Site is subject to the New Jersey Stormwater Management rules (N.J.A.C. 2023a), and because the Site is located within the Pinelands area, it is also subject to the Pinelands Comprehensive Management Plan (N.J.A.C. 2023b). The landfill closure stormwater management is also subject to the New Jersey Department of Environmental Protection (NJDEP) Division of Solid and Hazardous Waste rules as per N.J.A.C. 7:26 (2023c) and the New Jersey Sanitary Landfill Technical Manual (NJDEP 1999).

The proposed landfill closure and solar array including the proposed stormwater management are presented in the drawing set entitled "Landfill Closure Design, Manchester Township Landfill, Manchester Township, New Jersey," prepared by Geosyntec Consultants Inc. (Geosyntec) for NextGrid, Inc. (NextGrid) and dated November 2024.

SITE CONDITIONS

Pre-Development Condition:

The pre-development hydrologic conditions evaluated in this analysis include the existing conditions as documented in an existing conditions survey dated 15 October 2021. The existing conditions generally include an uncapped landfill with access paths and a composting area, a police shooting range, and a salt storage shed. There are also miscellaneous stockpiles of asphalt millings and debris piles on the landfill. The undeveloped portions of the existing landfill are covered by grass as determined by visual observations and aerial imagery. Elevations at the site range from approximately 143 to 173 feet North American Vertical Datum 1988 (NAVD88). Groundwater at the Site generally flows from southwest to northeast and ranges in elevation from 135 to 137 feet NAVD88. The remainder of the Site not covered by landfill or other land uses is primarily forested. Stormwater runoff from the landfill generally drains

via overland flow. Runoff from the composting area drains to one of two existing stormwater management ponds. Runoff from the remainder of the landfill and other land uses generally drains via overland flow into the adjacent undeveloped portions of the Site and primarily infiltrates.

Post-Development Condition:

The post-development hydrologic conditions evaluated in this stormwater report include the completed cap and closure of the landfill, relocation of the salt storage area, and reconfiguration and removal of gravel access road segments. Following closure of the landfill, NextGrid plans to install a ballast block-mounted solar array system on top of the final cover system. The post-development condition includes a capped vegetated (grassed) landfill with pervious clean soil cover, a composting facility with impervious coarse aggregate cover, an impervious salt storage area, access roads, and access paths. The police shooting range will remain in the post-development condition. The stormwater management features were designed for runoff from these land uses as well as the future solar array that will be designed on top of the final cover system. The post-development stormwater management system designed for the landfill closure consists of a series of diversion berms that collect and convey stormwater runoff from the closure into six spatially distributed stormwater best management practices (BMPs). The BMPs each consist of a sediment forebay and infiltration basin. BMPs whose contributing drainage area includes regulated motor vehicle surfaces were designed with an additional bioretention basin.

DESIGN CRITERIA

The criteria for the design of the permanent stormwater management features presented in this calculation package represent the most conservative criteria identified from the various resources evaluated. These resources included but were not limited to: New Jersey Administrative Code (N.J.A.C.) 7:8 Stormwater Management (N.J.A.C. 2023a); Pinelands Comprehensive Management Plan (N.J.A.C. 2023b); New Jersey Department of Agriculture (NJDA) Standards for Soil Erosion and Sediment Control in New Jersey (NJDA Standards) (NJDA 2017); NJDEP Technical Manual for Sanitary Landfill Permits and Approvals (NJDEP 1999); NJDEP Stormwater Best Management Practices Manual (NJDEP 2023); Federal Highway Administration (FHWA) Hydraulic Design Series No. 15 Design of Roadside Channels with Flexible Linings (FHWA 2005), Hydraulic Design Series No. 4 Introduction to Highway Hydraulics (FHWA 2008), Hydraulic Design Series No. 5 Hydraulic Design of Highway Culverts (FHWA 2012); Pennsylvania Department of Environmental Protection (PADEP) Erosion and Sedimentation Control Manual (PADEP 2003); and National Resources Conservation Service (NRCS) Riprap Design Methods (NRCS 2003).

The specific design criteria considered for the proposed stormwater management system and individual stormwater management features are presented below. The design criteria exceed the design requirements in the resources evaluated but were used as an additional factor of safety for the long-term operations and

maintenance at the Site.

Pre-development verse Post-development Site Runoff:

The Site hydrologic conditions were modeled under the 2-year, 10-year, and 100-year, 24-hour current and projected design storms to demonstrate compliance with the New Jersey Stormwater runoff quantity standards N.J.A.C. 7:8-5.6(b)2 (N.J.A.C. 2023a). The New Jersey Stormwater runoff quantity standards require that the hydrologic and hydraulic analysis demonstrate that there is no increase, as compared to the pre-construction condition, in the peak runoff rates of stormwater leaving the site for the 2-, 10-, and 100-year current and projected storm events, as defined and determined pursuant to N.J.A.C. 7:8-5.7(c) and (d), respectively, and that the increased volume or change in timing of stormwater runoff will not increase flood damage at or downstream of the site. The post-development stormwater management system at the Site was designed so that the total volume associated with the 100-year, 24-hour projected design storm will be retained and infiltrated on the Site.

Additionally, the stormwater management system was designed so that there will be no direct discharge of stormwater runoff from any point or nonpoint source to any wetland, wetlands transition area, or surface waterbody, and stormwater runoff will not increase the volume and rate of discharge into any wetland, wetlands transition area, or surface water body from that which existed prior to development of the parcel.

Stormwater Diversion Berms

Fourteen diversion berms (also referred to as swales) were designed to convey the peak discharge associated with the projected 100-year, 24-hour design storm event without overtopping and with a minimum 0.5 feet of freeboard. Additionally, to avoid unstable flow, which induces extra scouring of the diversion berm bed, the flow depth during the 100-year, 24-hour design storm, was designed to be outside of 10 percent of the critical depth. The lining for diversion berms was designed to withstand the design shear stress associated with peak discharge during the 100-year, 24-hour design storm event.

Culverts

One culvert was designed, which will route stormwater flow to Basin 4 underneath the access road. The culvert was designed to convey the peak discharge associated with the projected 100-year, 24-hour design storm event without overtopping the upstream roadside swale.

Stormwater BMPs

Six spatially distributed stormwater BMPs were designed, which each consist of a sediment forebay and

infiltration basin. BMPs whose contributing drainage area includes regulated motor vehicle surfaces were designed with an additional bioretention basin and with a maximum drainage area of 2.5 acres (not including direct rainfall onto the stormwater BMP system). The sediment forebay design includes a riser with a pipe outlet to the adjacent bioretention basin (or to the adjacent infiltration basin for the stormwater BMPs that do not have a bioretention basin) and a spillway to the infiltration basin. The bioretention basin design includes a riser with a pipe outlet to the infiltration basin. The sediment forebays were designed to store the volume of runoff associated with the NJDEP water quality design storm (WQDS) from the contributing drainage area without overtopping the sediment forebay riser rim elevation. The bioretention basins were designed to also store the volume of runoff associated with the NJDEP WQDS with 1 foot of ponded water in the bioretention basin. The infiltration basins were designed to store the runoff volume associated with the projected 100-year, 24-hour storm without overtopping the infiltration basin spillway.

Groundwater Mounding

As required by the New Jersey Stormwater Management Rules (N.J.A.C. 2023a), an assessment of hydraulic impacts to the groundwater table due to infiltration BMPs was conducted. This analysis determined feasibility of stormwater infiltration within the required time limit of 72 hours and potential impacts to nearby structures by modeling groundwater mounding under and around each infiltration basin. Groundwater mounding analysis was conducted using the projected 100-year, 24-hour design storm and the infiltration basins were designed so that the estimated elevation of the groundwater mound was below the bottom elevation of the infiltration basin.

Energy Dissipation

Energy dissipation pads and overflow spillways were designed to dissipate energy at stormwater outlets. The energy dissipation pads were designed to dissipate the energy generated from the outlet pipes from each sediment forebay and bioretention basin as well as the culvert, which routes into Basin 4. The energy dissipation pad geometry and riprap diameter were designed to withstand the erosive forces of the projected 100-year, 24-hour design event.

The spillways were designed at each sediment forebay (inlet and overflow) and infiltration basin to provide erosion resistance between the basin outlets and the downstream area. The sediment forebay spillway geometry and riprap diameter, at the inlet where the diversion berm comes in and at the overflow, were designed to withstand the erosive forces of the 100-year, 24-hour design storm event peak flow.

The overflow spillways of the infiltration basins were designed as an energy dissipation pad at the lowest elevation along the rim of each basin. The riprap diameters and geometry of these spillways were sized based on the peak discharge associated with the 10-year, 24-hour storm assuming the infiltration

basin is full capacity (i.e., a 100-year, 24-hour storm event directly followed by a 10-year, 24-hour design storm).

METHODOLOGY

Analysis was performed in accordance with N.J.A.C. 7:8-5.7 (2023a), using hydrology and hydraulic procedures presented in the Soil Conservation Service (SCS) Technical Release 55 (TR-55) (USDA 1986) and the New Jersey Stormwater Best Practices Manual (NJDEP 2021). The pre-development and post-development conditions at the Site were modeled using HydroCAD software (HydroCAD 2022), and were compared using drainage areas with similar discharge points (comparison points) for both conditions. The HydroCAD output is included in **Attachment A**.

Diversion Berms

The diversion berm capacity and freeboard criteria were evaluated with the post-development HydroCAD model.

Lining for the diversion berms was evaluated based on the permissible shear stress. The diversion berm was assumed stable if the calculated shear stress at the bottom of the channel was lower than the permissible shear stress for the channel boundary condition as assessed by the following relationship:

$$\tau_p \geq \gamma \cdot d \cdot S$$

where τ_p is the permissible shear stress; γ is the specific weight of water (62.43 lbf/ft^3); d is the maximum depth of flow for the design discharge; and S is the slope of channel.

Additionally, to avoid unstable flow, the flow depth during the 100-year, 24-hour design storm, was designed to be outside of 10 percent of the critical depth. The flow is at its critical depth when the Froude number is 1. The critical depth was assessed through the following relationship:

$$\text{yc} = (\frac{V}{2})^2 (g)^{-1}$$

where yc is the critical depth; V is the velopcity at flow depth; and g is the gravitational constant.

Energy Dissipation Pads and Spillways

The riprap diameter and geometry of the energy dissipation pads and spillways were designed with the following equations based on guidance from the Standard for Conduit Outlet Protection (NJDA 2017).

$$D_{50} = \frac{0.02}{TW} q^{1.33}$$

$$L_a = 1.8\left(\frac{q}{D_o^{0.5}}\right) + 7D_o \; and \;\; W = 3W_o + L_a \;\; when\, TW < 0.5D_o \text{ or}$$

$$L_a = 3\left(\frac{q}{D_o^{0.5}}\right) and\, W = 3W_o + 0.4L_a \;\; when\, TW \geq 0.5D_o$$

$$where\, q = \frac{Q}{W_o}$$

Where D_{50} is the median stone diameter (ft), TW is the tailwater depth (ft), q is the unit discharge ($ft^3/s/ft$), W_O is the pipe width or flow width (ft), D_o is the pipe height or flow height (ft), L_a is the length of the energy dissipation pad (ft), W is the terminal apron width, and Q is the outlet flow (ft^3/s).

Culverts

The culvert diameter was determined using the nomographs included in the Hydraulic Design of Highway Culverts, Highway Design Series Number 5 (HDS5) (FHWA 2012).

Stormwater BMPs

The infiltration basins, bioretention cells, and sediment forebays were modeled as ponds within the HydroCAD model. Stage/storage information as well as the outlet information (riser pipes, culverts, and spillways) were entered into the model for each of the ponds. The storage capacity of the infiltration basins, bioretention cells, and sediment forebays based on ponding depth, area, and bioretention soil depth (for the bioretention basins) were also calculated within a spreadsheet.

Groundwater Mounding

The groundwater mounding for the infiltration basins was evaluated using the methodology described in Chapter 13 of the NJDEP Stormwater BMP Manual (NJDEP 2023). The Hantush equation uses the soil permeability rate, soil specific yield, horizontal hydraulic conductivity, basin dimensions, duration of infiltration, and initial thickness of the saturated zone to determine the maximum groundwater mound height and breadth.

DESIGN INPUT PARAMETERS AND ASSUMPTIONS

Design Storm Rainfall Distribution and Depth

The design storms used in this analysis were the 2-year, 10-year, and 100-year, 24-hour events (current and projected) and the NJDEP WQDS. The rainfall depths for the current and projected design storm events for Manchester, Ocean County, New Jersey, are provided in Table 1 and Table 2 below as defined by N.J.A.C. 7:8-5.5(d) and 7:8-5.7 (N.J.A.C. 2023a). The NJDEP WQDS consists of 1.25 inches of rainfall over two hours. Hydrologic analyses were conducted using the NOAA Region D rainfall precipitation distribution (NJDEP 2023).

Table 1. Current design storms and associated rainfall depth and storm length

Design Storm Frequency	Precipitation Depth (inches)	Storm Length (hours)
2-year	3.40	24
10-year	5.31	24
100-year	9.28	24
NJDWP WQDS	1.25	2

Table 2. Projected design storms and associated rainfall depth and storm length

Design Storm Frequency	Precipitation Depth (inches)	Storm Length (hours)
2-year	4.01	24
10-year	6.26	24
100-year	11.17	24
NJDWP WQDS	1.25	2

Drainage Area Delineation

The pre-development condition model included three (3) drainage areas (e.g., subcatchments). In general, runoff from each subcatchment drains via overland flow to the base of the existing landfill. **Attachment B** includes the drainage area delineations for the pre-development model. Table 3 includes the pre-development drainage areas.

Table 3. Pre-Development Drainage Areas Summary

Drainage Area	Area (acres)

DA1	11.17
DA2	20.83
DA3	2.35

The post-development condition model included subcatchments delineated to each of the diversion berms. In general, runoff from each subcatchment drains via overland flow to diversion berms that direct the runoff into the sediment forebay of one of the six stormwater basins (located adjacent to the landfill closure area). **Attachment C** includes the drainage area delineations for the post-development condition. Table 4 includes the post-development drainage areas to each diversion berm as well as the total area draining to each stormwater basin. In the post-development condition,limited vegetated area around the periphery of the landfill will drain over land to the surrounding area. This area was not included in the HydroCAD model but included in Table 4. Direct rainfall to the basins and run-on from adjacent forested areas were accounted for in the HydroCAD model and are included in Table 5.

Table 4. Post-Development Drainage Areas Summary

Drainage Area	Area (ac)	Total Area (acres)
1A West	1.70	11.64
1A Central	5.75	
1A East	4.19	
1B	2.39	2.39
2A West	1.26	2.44
2A East	1.18	
2B West	4.19	8.68
2B East	4.50	
3	2.43	2.43
4 West	1.61	2.47
4 East	0.87	
Overland Flow off Landfill	4.3	4.3

Table 5. Areas (in Acres) of direct rainfall to the stormwater BMPs

Area	Sediment Forebay	Bioretention Cell	Infiltration Basin
Basin 1A: Direct Rainfall	0.08	0	1.21

Basin 1B: Direct Rainfall	0.15	0.19	0.69
Basin 1B: Forested Run-on	0.08	0.08	0
Basin 2A: Direct Rainfall	0.19	0.311	1.13
Basin 2B: Direct Rainfall	0.11	0	1.20
Basin 3: Direct Rainfall	0.02	0.09	0.37
Basin 4: Direct Rainfall	0.12	0.11	0.55
Basin 4: Forested Run-on	0	0.71	0.19

Curve Number (CN)

The area of the landfill is classified as Pits, Sand and Gravel. The remainder of the Site is classified as various sandy soils, including Atsion Sand (AtsAO), Lakehurst Sand (LakB), Lakewood Sand (LasB and LasC), and Woodmansie Sand (WobB). According to the NRCS Web Soil Survey (NRCS 2015), soil types in the pre-development subcatchments are entirely HSG A. This is consistent with soil borings performed on-Site which identified white and tan fine sand, coarse sand in some intervals and little silt or clay. This HSG value was referenced when identifying the curve number CN values for the pervious areas of the subcatchments in the pre-development condition. The landfill closure will consist of a 24-inch thick (minimum) permeable clean soil cover system comprised of 18-inch-thick layer of clean sand overlain with a 6-inch-thick layer of vegetative support material. An HSG A was referenced when identifying CN values for the pervious areas of the subcatchments in the post-development condition.

The pre-development land use in each subcatchment was determined by reviewing existing plans and aerial imagery, as well as visual observations. The land use was determined to be mostly vegetated areas of the uncapped landfill (greater than 75% grass cover in good condition) and unimproved dirt roads with areas of impervious cover (buildings, concrete cover, salt storage shed, and asphalt cover). The vegetated areas were modeled with a curve number of 39, the unimproved dirt roads were modeled with a curve number of 72, and impervious areas were modeled with a curve number of 98.

The post-development condition is comprised of vegetation (capped landfill area), impervious cover (gravel access roads, compost area, asphalt pad for salt shed, and future potential solar array ballast blocks). A CN of 39 was used for the vegetated areas, a CN of 98 was used for the gravel access roads, compost area, and solar array ballast blocks, and a CN of 72 was used for unimproved sand roads.

The area of impervious surface due to potential future solar panel ballast blocks was estimated under the assumption that the solar panels will produce 5.2 megawatts of power with 350 30-square-foot ballast

blocks required per megawatt of power. This resulted in a total impervious area of 1.25 acres, which was assumed to be uniformly distributed across the available space for solar panels (drainage areas to Basin 1A and Basin 2B).

Time of Concentration (TC)

The time of concentration (TC) was calculated using the methodology in Chapter Five of the New Jersey Stormwater Best Practices Manual (NJDEP 2023); the flow path was measured from the hydrologically most distant point from each diversion berm within the drainage area. Within the flow path, the sheet flow length was limited to 100 feet or the McCuen-Spiess limitation, whichever was shorter, and the remainder of the flow path was assumed to be shallow concentrated flow. The TC was calculated using the current and projected 2-year, 24-hour design storm in the current and projected models, respectively. The TCs for the post-development condition for current and proposed conditions are included in Table 6. The time of concentration paths are shown on **Attachment B** and **Attachment C.**

Table 6. Times of concentration for the post-development current and proposed conditions

Drainage Area	Time of Concentration (min) Current Conditions	Time of Concentration (min) Proposed Conditions
1A West	14.6	13.7
1A Central	17.7	16.8
1A East	16.1	14.2
1B	3.1	3.0
2A West	2.2	2.1
2A East	3.4	3.3
2B West	17.5	16.5
2B East	17.1	16.1
3	15.0	14.3
4 West	1.8	1.7
4 East	3.2	3.1

Diversion Berms

The permissible shear stress used for the permanent vegetated diversion berm lining was 2.1 pounds per square foot (lb/ft^2) based on Class B vegetation (PADEP 2003) and the permissible shear stress used for the R-4 (median 6-inch diameter) riprap was 2.0 lb/ft^2 (PADEP 2003). A Manning's roughness coefficient (n-value) of 0.08 was used for the vegetated diversion berms, representing earth, long dense weeds open channels (HydroCAD 2022), and a Manning's n-value of 0.049 was used for the riprap lined diversion

berms (PADEP 2003). Longitudinal slopes of the diversion berms were based on the proposed grading and ranged from 0.4% to 3.2%.

Groundwater Mounding

Groundwater mounding calculations were completed according to Chapter 13 of the New Jersey Stormwater Best Management Practices Manual (NJDEP 2023). The groundwater mounding analysis is included as **Attachment D**. The water table elevation was determined from the "Final Hydrogeologic Investigation Report, Manchester Landfill" prepared for NextGrid, Inc and dated February 2023.

During the pre-design investigation, soil infiltration testing was conducted at the locations of each of the initially proposed infiltration basins (Basins 1A, 1B, 2A, 2B, 3, and 4). The results of this testing were used to inform the soil permeability rate for the groundwater mounding analysis. A safety factor of two was applied to the tested soil permeability rates for all basins. The horizontal hydraulic conductivity was assumed to be five times the soil permeability rate (with the safety factor). The default values for specific yield (0.15) and initial thickness of the saturated zone (10 ft) were used.

Because the basins are irregularly shaped, for the groundwater mounding calculations, basin dimensions were converted to a rectangular shape with the same area that best fit the original shape of the design. The duration of infiltration was calculated using the basin dimensions, soil permeability rate, and volume of runoff stored in each basin during the projected 100-year, 24-hour design storm as calculated by the HydroCAD model.

RESULTS

This section presents the results of the hydraulic and hydrologic analyses including the comparison of pre-development and post-development peak flow rates and sizing of stormwater management features.

Peak Discharge and Hydrographs

Peak discharge rates and volumes of the pre-development conditions model were compared to peak discharge rates of the post-development model for each drainage area. Summaries of the comparisons are provided in Table 7 and Table 8. With the implementation of the proposed stormwater management system, the rainfall from all design storms up to and including the projected 100-year, 24-hour storm is retained and infiltrated on the Site. In the post-construction model, there is no runoff from the Site, therefore, the post-construction peak discharge from the Site does not exceed the pre-construction peak discharge and there is no increased flood damage at or downstream of the Site. These results demonstrate compliance with the New Jersey Stormwater runoff quantity standards N.J.A.C. 7:8-5.6(b)2 (N.J.A.C. 2023a). The hydrographs are included in the HydroCAD output in **Attachment A**.

Table 7. Modeled peak flow rates of Site pre-development and post-development under current condition and proposed condition design storms

Energy Dissipation

Supporting calculations for the energy dissipation pads and spillways are presented in **Attachment E**. A diagram of the inlet size, apron length, and apron width is also provided in **Attachment E;** the spillways were designed to be rectangular. The minimum energy dissipation pad geometry for pipe outlets is summarized in Table 10 below. The spillway geometry is summarized in Table 11 below. A riprap size of nine inches will be used for all of the pipe outlet energy dissipation and spillways, which was the maximum calculated riprap size in the energy dissipation calculations.

Table 10. Pipe Outlet Energy Dissipation Pad Sizing

Basin	La - Minimum Apron Length (ft)	W- Minimum Apron Width (ft)	D_{50} - Minimum Median Stone Diameter (in)*	Minimum Lining Thickness (with filter layer, ft)
Basin 1A Forebay Outlet	20	26	4	0.7
Basin 1B Forebay Outlet	22	26	2	0.3
Basin 1B Bioretention Outlet	22	28	7	1.1
Basin 2A Forebay Outlet	19	24	1	0.2
Basin 2A Bioretention Outlet	20	24	9	1.6
Basin 2B Forebay Outlet	24	30	9	1.5
Basin 3 Forebay Outlet	19	23	3	0.5
Basin 3 Bioretention Outlet	16	20	3	0.5
Basin 4 Forebay Outlet	22	26	2	0.3
Basin 4 DA4 Culvert	16	19	2	0.4
Basin 4 Bioretention Outlet	22	28	4	0.7

*ASTM D5519 characterizes riprap as having a size of three inches or greater. Some minimum median stone diameters in this table are smaller than three inches and would be considered coarse aggregate rather than riprap. However, as stated above, a stone size of nine inches (riprap) will be used for all spillways and energy dissipation pads.

Table 11. Spillway Sizing

Spillway	La - Minimum Apron Length (ft)	W_o – Minimum Apron Width	D_{50} - Minimum Median Stone Diameter (in)	Minimum Lining Thickness (with filter layer, ft)
Basin 1A Infiltration Basin	5	12	8	1.3
Basin 1B Infiltration Basin	3	12	3	0.6
Basin 2A Infiltration Basin	4	12	6	1.1
Basin 2B Infiltration Basin	4	12	7	1.2
Basin 3 Infiltration Basin	2	12	1	0.3
Basin 4 Infiltration Basin	2	12	2	0.4
Basin 1A Forebay	3	25	1	0.2
Basin 1B Forebay	3	10	1	0.2
Basin 2A Forebay	2	20	1	0.1
Basin 2B Forebay	0	12	0	0
Basin 3 Forebay	1	10	1	0.1
Basin 4 Forebay	0	10	0	0
Basin 1A Forebay Inlet	9	10	3	0.4
Basin 1B Forebay Inlet	11	10	3	0.5
Basin 2A Forebay Inlet	8	10	2	0.4
Basin 2B Forebay Inlet	9	10	2	0.4
Basin 3 Forebay Inlet	10	10	1	0.2
Basin 4 Forebay Inlet	7	10	3	0.5

*ASTM D5519 characterizes riprap as having a size of three inches or greater. Some minimum median stone diameters in this table are smaller than three inches and would be considered coarse aggregate rather than riprap. However, as stated above, a stone size of nine inches (riprap) will be used for all spillways and energy dissipation pads.

Culvert

There is one culvert that conveys stormwater under the access road and into Basin 4. The nomograph used to size the culvert is included in **Attachment E** and the results are summarized in Table 12 below.

Table 12. Culvert Sizing

Culvert	Number of Pipes	Diameter per Pipe (in)	Capacity (cfs)	Required Capacity	Headwater (ft)	Maximum Permissible Headwater (ft)
DA4 Culvert	2	12	10.5	10.5	1.8	1.8

The culvert headwater does not exceed the diversion berm depth of 1.8 feet; therefore, overtopping of the upstream diversion berm banks is unlikely to occur during storms up to projected 100-year 24-hour design storm event.

Stormwater BMPs

The sediment forebay geometry calculations are included in the HydroCAD output in **Attachment A** and in **Attachment E** and the results are summarized in Table 13 below.

Table 13. Sediment Forebay Geometry

	Bottom Area (SF)	Depth (ft)	Side Slopes (H:V)	Volume (CF)
Basin 1A	662	2.8	3:1	3,064
Basin 1B	3,096	2.5	3:1	9,827
Basin 2A	3,639	1.7	3:1	7,232
Basin 2B	928	2.5	3:1	3,462
Basin 3	3,115	1.5	3:1	5,426
Basin 4	2,116	3.0	3:1	8,832

The bioretention basin geometry calculations are included in the HydroCAD output in **Attachment A** and in **Attachment E** and the results are summarized in Table 14 below.

Table 14. Bioretention Basin Geometry

	Bottom Area (SF)	Ponding Depth (ft)	Soil Depth (ft)	Side Slopes (H:V)	Volume (CF)
Basin 1B	4,198	1.0	4.0	3:1	9,624
Basin 2A	4,692	1.0	2.5	3:1	8,622
Basin 3	3,477	1.0	1.5	3:1	5,395
Basin 4	2,922	1.0	4.0	3:1	6,753

The infiltration basin geometry calculations are included in the HydroCAD output in **Attachment A** and in **Attachment E** and the results are summarized in Table 15 below.

Table 15. Infiltration Basin Geometry for Infiltration Trench

	Depth (ft)	Side Slopes (H:V)	Volume (CF)
Basin 1A	7.9	3:1	239,871
Basin 1B	5.9	3:1	118,777
Basin 2A	7.4	3:1	207,789
Basin 2B	4.7	3:1	177,014
Basin 3	4.3	3:1	58,425
Basin 4	6.4	3:1	95,875

Groundwater Mounding

The groundwater mounding analysis is included as **Attachment D** and the results are summarized in Table 16 below. The estimated groundwater mound elevation resulting from infiltration of the projected 100-year, 24-hour design storm is below the bottom of the infiltration basin for all basins when accounting for the reduction in the vertical hydraulic gradient as infiltration occurs. All drainage times are within the 72-hour limit.

Table 16. Groundwater Mounding Analysis Summary

	Basin Bottom Elevation (ft)	Groundwater Table (ft)	Groundwater Mound Height (ft)	Groundwater Mound Elevation (ft)	Duration of Infiltration (hr)
Basin 1A	150	136	13.4	149.4	40.8
Basin 1B	148	137	8.4	145.4	52.5
Basin 2A	150.5	138	12.3	150.3	22.5
Basin 2B	151	137	13.8	150.8	70.3
Basin 3	142	137	4.7	141.7	60.0
Basin 4	152	137	12.8	149.8	26.5

CONCLUSION

A post-development stormwater management system was designed for the proposed landfill closure and future solar development of the Manchester Landfill. The system includes stormwater diversion berms, sediment forebays, bioretention basins, infiltration basins, energy dissipation pads, spillways, culverts and

pipes.

The proposed stormwater management system has been designed in accordance with the stormwater management requirements of the New Jersey Stormwater Management Rules (N.J.A.C. 2023a) and the Pinelands Comprehensive Management Plan (N.J.A.C. 2023b).

NOTES

1. EXISTING TOPOGRAPHY, PLANIMETRIC FEATURES, AND PROPERTY LINES TAKEN FROM ELECTRONIC FILE TITLED 'MANCHESTER_BLOCK 116 LOT 13.DWG' PROVIDED BY COLLIERS ENGINEERING & DESIGN OF RED BANK, NEW JERSEY (COLLIERS) ON 15 OCTOBER 2021.
2. VERTICAL SITE DATUM IS IN FEET NORTH AMERICAN VERTICAL DATUM 1988 (NAVD88). HORIZONTAL DATUM IS NORTH AMERICAN DATUM 1983 (NAD 83) NEW JERSEY STATE PLANE.
3. LANDFILL BOUNDARY AND MONITORING WELL LOCATIONS FROM ELECTRONIC FILE PROVIDED BY COLLIERS ON 26 OCTOBER 2021.
4. UTILITY TYPES AND LOCATIONS SHOWN ARE FOR REFERENCE ONLY. CONTACT NEW JERSEY ONE CALL FOR A UTILITY MARKOUT PRIOR TO INITIATING EARTH DISTURBING ACTIVITIES. CONFIRM AND FIELD-LOCATE ALL UTILITIES.
5. REFER TO INDIVIDUAL DRAWINGS FOR DRAWING-SPECIFIC NOTES AND LEGENDS.
6. EXISTING CONDITIONS MAY DIFFER FROM THAT SHOWN DUE TO SITE OPERATION ACTIVITIES PERFORMED AFTER THE DATE OF THE SURVEY.

Attachment C
Post-Development Drainage Delineations

NOTES:

1. EXISTING MATERIAL STOCKPILES ON LANDFILL TO BE REMOVED TO ESTABLISH A RELATIVELY UNIFORM GRADES INTO WHICH THE FINAL COVER SYSTEM MAY BE TIED. EQUIPMENT OWNED BY MANCHESTER TOWNSHIP WILL BE REMOVED BY MANCHESTER TOWNSHIP PRIOR TO THE WORK.
2. MATCH ACCESS ROAD TO EXISTING GRADE OUTSIDE THE LANDFILL BOUNDARY AT A SLOPE NO GREATER THAN 10 PERCENT.
3. PASSIVE AND INDUCED DRAFT LANDFILL GAS VENTS TO BE INSTALLED TO THE BOTTOM OF WASTE OR GROUNDWATER TABLE, WHICHEVER IS HIGHER. ACTUAL INSTALLATION DEPTHS TO BE SELECTED DURING PREPARATION OF CLOSURE CONSTRUCTION DOCUMENTS.
4. FINAL EXTENTS OF THE COMPOSTING AND RECYCLING AREAS WILL BE DETERMINED BY MANCHESTER TOWNSHIP PRIOR TO CONSTRUCTION. FINAL COVER SYSTEM IN THE COMPOSTING AND RECYCLING OPERATIONS AREAS WILL BE A MINIMUM THICKNESS OF THREE FEET OF COMPACTED SOIL (DETAIL 2 ON DRAWING 7).
5. SECURITY BOOTH AND SURROUNDING ASPHALT PAVEMENTS WILL REMAIN DURING CLOSURE CONSTRUCTION AND POST-CLOSURE OPERATION. FINAL COVER SYSTEM WILL BE MATCHED TO THE EXISTING ELEVATIONS AT THE EDGE OF THE ASPHALT PAVEMENT.
6. EXISTING LIDAR TOPOGRAPHY DATA FROM USGS LIDAR POINT CLOUD DATA PUBLISHED 11 SEPTEMBER 2014 WITH METADATA UPDATED 12 APRIL 2023 FROM USGS NATIONAL MAP DATA DELIVERY, GIS DATA DOWNLOAD, RECEIVED 31 OCTOBER 2024.
7. INTERPRETED LIMIT OF WASTE BASED ON RESULTS OF PRE-DESIGN INVESTIGATION. TO THE EXTENT ALLOWABLE DURING CONSTRUCTION, DEVELOPED AREAS BETWEEN INTERPRETED LIMIT OF WASTE AND LANDFILL FINAL COVER SYSTEM WILL REMAIN WITH ANY DISTURBED AREAS BEING RESTORED TO PROVIDE EQUAL OR BETTER WASTE COVER AND STORMWATER DRAINAGE THAN PRE-CONSTRUCTION CONDITIONS.
8. INTERPRETED LIMIT OF WASTE BASED ON RESULTS OF PRE-DESIGN INVESTIGATION. WASTE ENCOUNTERED DURING THE EXCAVATION OF THE BORROW AREA WILL BE RELOCATED UNDER THE FINAL COVER SYSTEM. WASTE WILL BE IDENTIFIED BASED ON VISUAL OBSERVATIONS.
9. RIPRAP LINING SHALL BE INSTALLED A MINIMUM OF 10 FEET UPSTREAM AND DOWNSTREAM OF THE BENDS IN DIVERSION BERMS.

Groundwater Mounding Analysis

Infiltration Basin Mounding Analysis - Basin 1A

Parameter	Description	Variable	Equation, if Calculated Value	Value	Unit	Assumption
Input Parameter						
Recharge rate (permeability rate)	Vertical hydraulic conductivity of the most restrictive soil layer in the unsaturated zone below the infiltration BMP.	R	Determined through laboratory testing and decreased as needed during model iteration.	2.5 5	in/hr ft/day	10 in/hr is the maximum permissible input to the equation, including safety factor of 2
Specific yield	Volume of water that will drain from a soil specimen due to gravity, divided by the total volume of the specimen.	Sy	Given model assumption.	0.15	--	0.15 is default value. A value greater than 0.15 can only be used based on soil testing results and may not exceed 0.2.
Horizontal hydraulic conductivity	The rate at which water can move in the horizontal direction.	Kh	Kh=5*R	50	in/hr	Manchester is located within the coastal plain physiographic province of New Jersey.
1/2 length of basin (x direction)	Half the length of basin.	x	x=L/2	123.5663636	ft	Basin is irregular in shape, but was fit with a rectangular shape with the same bottom area.
1/2 width of basin (y direction)	Half the width of basin.	y	y=Wt/2	44	ft	
Duration of infiltration period	The time required for the BMP to drain the volume of stormater runoff at the specified rate.	t	t=Vinf/(Ainf*R)	40.84	hr	Maximum duration is 72-hours.
Saturated Zone Initial Thickness	Thickness of saturated zone beneath the proposed BMP.	hi(0)	Given model assumption.	10	ft	A value of 10 ft used unless another values was determined based on on-site testing. Values may not exceed 75 ft.
Values Used for Calculating Input Parameters						
Infiltrated Runoff Volume	Volume of runoff to be infiltrated.	Vinf	*Design Parameter*	185030	cf	Modeled storage volume for the projected 100-year, 24-hour storm as calculated by the HydroCAD model.
Infiltration Area	Infiltration area of basin.	Ainf	*Design Parameter* *Ainf=L*Wt*	21748	sf	Infiltration area is the footprint of the bottom of the basin
Basin Elevation	Infiltration basin bottom elevation.	Belev	*Design Parameter*	150	ft NAVD88	The base of the infiltration basin does not go lower than this elevation.
Seasonal High Water Table	The water table location upon which mounding will occur.	SHWT	*Site-Specific Assumption*	136	ft NAVD88	Determined from the groundwater elevation lines shown on the pre-development conditions figure.
Outputs						
Height of Groundwater Mound	Maximum height of water mounded on top of the SHWT at the end of the duration of the infiltration period.	Δhmax	*Model Output*	13.379	ft	Output from the Hantush spreadsheet.
Groundwater Mounding Elevation	Elevation of the mounded groundwater beneath the infiltration basin.	GMelev	*Model Output*	**149.379**	ft NAVD88	

Infiltration Basin Mounding Analysis - Basin 1B

Parameter	Description	Variable	Equation, if Calculated Value	Value	Unit	Assumption
Input Parameter						
Recharge rate (permeability rate)	Vertical hydraulic conductivity of the most restrictive soil layer in the unsaturated zone below the infiltration BMP.	R	Determined through laboratory testing and decreased as needed during model iteration.	1.5	in/hr	10 in/hr is the maximum permissible input to the equation, including safety factor of 2
				3	ft/day	
Specific yield	Volume of water that will drain from a soil specimen due to gravity, divided by the total volume of the specimen.	Sy	Given model assumption.	0.15	--	0.15 is default value. A value greater than 0.15 can only be used based on soil testing results and may not exceed 0.2.
Horizontal hydraulic conductivity	The rate at which water can move in the horizontal direction.	Kh	Kh=5*R	50	in/hr	Manchester is located within the coastal plain physiographic province of New Jersey.
1/2 length of basin (x direction)	Half the length of basin.	x	x=L/2	80.54164948	ft	Basin is irregular in shape, but was fit with a rectangular shape with the same bottom area.
1/2 width of basin (y direction)	Half the width of basin.	y	y=Wt/2	48.5	ft	
Duration of infiltration period	The time required for the BMP to drain the volume of stormater runoff at the specified rate.	t	t=Vinf/(Ainf*R)	52.53	hr	Maximum duration is 72-hours.
Saturated Zone Initial Thickness	Thickness of saturated zone beneath the proposed BMP.	hi(0)	Given model assumption.	10	ft	A value of 10 ft used unless another values was determined based on on-site testing. Values may not exceed 75 ft.
Values Used for Calculating Input Parameters						
Infiltrated Runoff Volume	Volume of runoff to be infiltrated.	Vinf	*Design Parameter*	102604	cf	Modeled storage volume for the projected 100-year, 24-hour storm as calculated by the HydroCAD model.
Infiltration Area	Infiltration area of basin.	Ainf	*Design Parameter* *Ainf=L*Wt*	15625	sf	Infiltration area is the footprint of the bottom of the basin
Basin Elevation	Infiltration basin bottom elevation.	Belev	*Design Parameter*	148	ft NAVD88	The base of the infiltration basin does not go lower than this elevation.
Seasonal High Water Table	The water table location upon which mounding will occur.	SHWT	*Site-Specific Assumption*	137	ft NAVD88	Determined from the groundwater elevation lines shown on the pre-development conditions figure.
Outputs						
Height of Groundwater Mound	Maximum height of water mounded on top of the SHWT at the end of the duration of the infiltration period.	Δhmax	*Model Output*	8.354	ft	Output from the Hantush spreadsheet.
Groundwater Mounding Elevation	Elevation of the mounded groundwater beneath the infiltration basin.	GMelev	*Model Output*	**145.354**	ft NAVD88

Notes

1. Basin 2B Forebay Spillway and Basin 4 Forebay Spillway do not receive flow during the modeled projected 100-year, 24-hour design storm event. A flow depth of 0.1 feet was assumed.

2. For added factor of safety, the median diameter used in the design for all of the forebay spillways was 9 inches.

1. PURPOSE

This Stormwater Operation and Maintenance Plan (the "Maintenance Plan") has been prepared as a supplement to the Landfill Closure and Post-Closure Care Plan (the "Closure Plan") prepared by Geosyntec Consultants, Inc. on behalf of NextGrid Manchester Landfill, LLC. The Maintenance Plan is intended to establish a detailed stormwater operation and management plan for the Manchester Township landfill stormwater management system.

2. FACILITY DESCRIPTION

The Manchester Township Landfill (landfill) occupies approximately 30 acres within Block 116, Lot 13 in Manchester, Ocean County, New Jersey. The property and the landfill are owned by Manchester Township.

The landfill closure includes a capped vegetated (grassed) landfill with pervious clean soil cover, a composting facility with impervious coarse aggregate cover, an impervious salt storage area, access roads, and access paths. The police shooting range is located to the northwest of the landfill closure. The stormwater management features were designed for runoff from these land uses as well as the solar array installed over the final cover system. The post-development stormwater management system designed for the landfill closure consists of a series of diversion berms that collect and convey stormwater runoff from the closure into six spatially distributed stormwater basins (Basin 1A, 1B, 2A, 2B, 3 and 4). The basins each consist of a sediment forebay and infiltration basin. Basins (Basin 1B, 2A, 3 and 4) whose contributing drainage area includes regulated motor vehicle surfaces were designed with an additional bioretention basin.

Maintenance easements will not be necessary for this facility. The coordinates of each stormwater basin are included in Table 1 below.

Table 1. Coordinates of Stormwater BMPs

Basin ID	Sediment Forebay	Bioretention Cell	Infiltration Basin
1A	39°57'46"N 74°24'16"W	N/A	39°57'47"N 74°24'13"W
1B	39°57'37"N 74°24'33"W	39°57'37"N 74°24'34"W	39°57'38"N 74°24'32"W
2A	39°57'30"N 74°24'28"W	39°57'30"N 74°24'29"W	39°57'30"N 74°24'30"W

4	39°57'41"N 74°24'28"W	39°57'42"N 74°24'27"W	39°57'43"N 74°24'28"W

3. CONTACT INFORMATION

Owner Information

Name: Manchester Township, NJ

Contact: Carl Block
Address: 1 Colonial Drive
City, State, Zip Code: Manchester Township, New Jersey 08759
Telephone Number: 732-657-8121

Lessee Information

Name: NextGrid Manchester Landfill, LLC, Inc.

Contact: Daniel Serber
Address: 117 Huntington Ave, Suite 1703, Unit 73069
City, State, Zip Code: Boston, MA 02115
Telephone Number:

Should operation control of the stormwater management features identified in this OMP be changed, a formal written and signed transfer of operational control shall be made between the parties clearly identifying the responsibilities and associated budgets being transferred. The agreement shall be incorporated into this OMP.

Manchester Township and the Lessee will be jointly responsible for maintenance of the cover system and the stormwater management structures on the Site and for documentation of inspection and maintenance, including the development of a maintenance log sheet. Corrective or preventative maintenance and inspections should be documented, including copies of maintenance-related work orders.

4. STORMWATER MANAGEMENT MEASURES

Stormwater management measures on the landfill closure consist of the following:

- Stormwater Diversion Berms: Diversion berms are included in the closure plan to capture and convey runoff to one of the infiltration basins. Diversion berms are lined with vegetation and riprap.
- Culverts: culverts convey flow under access roads.
- Infiltration basins including sediment forebays and bioretention cells: Six spatially distributed stormwater infiltration basins are included in the closure, which each consist of a sediment forebay and infiltration basin. Basins whose contributing drainage area includes regulated motor vehicle surfaces include an additional bioretention basin and have a maximum drainage area of 2.5 acres. The sediment forebay includes a riser with a pipe outlet to the adjacent bioretention basin (or to the adjacent infiltration basin for the stormwater BMPs that do not have a bioretention basin) and a spillway to the infiltration basin. The bioretention basin includes a riser with a pipe outlet to the infiltration basin. The infiltration basins were designed to store the runoff volume associated with the projected 100-year, 24-hour storm without overtopping the infiltration basin spillway.

- Energy Dissipation pads: Energy dissipation pads and overflow spillways dissipate energy at stormwater outlets.

5. REFERENCE PLANS

The following plans identify the stormwater management facilities described in this OMP:

1. Drawings entitled "Landfill Closure Design, Manchester Township Landfill, Manchester Township, New Jersey," dated November 2024;
2. Report entitled "Landfill Closure and Post-Closure Care Plan, Manchester Township Landfill, Manchester Township, Ocean County, New Jersey," revised November 2024 [Closure Plan]; and
3. Report entitled "Stormwater Report, Manchester Township Landfill, Manchester Township, Ocean County, New Jersey," enclosed within the Landfill Closure and Post-Closure Care Plan, dated November 2024 [Stormwater Report].

6. MAINTENANCE

Routine maintenance shall be conducted by qualified personnel identified by the Lessee. Section 2 of the Closure Plan and section 3.6 of the Stormwater Report identify specific post-closure maintenance requirements for stormwater management which have been incorporated into this OMP. Specific maintenance tasks and frequencies are provided in **Appendix A Routine Maintenance Tables** to this OMP. The Lessee may be required to adjust the maintenance frequency based on routine visual observations of the site and stormwater BMPs described in this OMP. General guidelines for maintenance for all stormwater facilities are as follows:

1. Follow local, state, and federal safety requirements as well as public safety guidelines and requirements described in this OMP.
2. Maintenance activities shall be performed in accordance with this OMP and the Closure Plan. In the case of a conflict between the plans, the Closure Plan takes precedent.
3. Perform maintenance during daylight hours.
4. Maintenance shall be performed in a manner that minimizes impacts to resource areas.
5. Construction activities including maintenance repairs shall be performed in a manner that minimizes impacts to existing trees and vegetation adjacent to the stormwater management feature and landfill closure.
6. Sediment removal should take place when all runoff has drained and the stormwater features are dry.
7. Should maintenance of the final cover system or the access road require equipment that may affect the integrity of the final cover system, additional measures (e.g., crane mats, additional aggregate, etc.) shall be provided to protect the final cover system. The final cover system may be disrupted only with prior approval of the NJDEP and will be restored to pre-disturbance conditions in accordance with the closure design and provisions of the disruption approval.
8. Follow recommended maintenance for each facility described in Appendix A.
9. Be familiar with the landfill closure maintenance requirements outlined in the Closure Plan.
10. Disposal of debris, trash, sediment and other waste material must be done at suitable

disposal/recycling sites and in compliance with all applicable local, state and federal waste regulations.

11. Maintain an operation and maintenance log, including visual inspections, repairs, replacement and disposal (for disposal, the log shall indicate the type of material and the disposal location). A log template is included in **Appendix B**.

7. SAFETY INFORMATION

Public safety guidelines and local, state, and federal safety requirements shall be followed during maintenance activities described in this OMP. Public safety shall take priority over maintenance activities. Public safety shall include, but not be limited to, the following:

1. Operators shall have required personal protective equipment (PPE) during maintenance activities;
2. Maintenance activities that are conducted entirely or partially in a right of way, shall have proper police detail according to local and state requirements;
3. Although not anticipated, confined space entry regulations may be applied during inspection of outlet structure. Confined space entry is regulated under 29 CFR 1910, Occupational Safety and Health Administration Standards (OSHA);
4. Staff to maintain facilities should be informed of potential safety risks prior to maintenance being performed; and
5. The Lessee has a site-specific health and safety plan provided as an attachment to the Closure Plan. The Lessee will utilize their own qualified personnel or subcontract a qualified contractor to perform the maintenance obligations of the Lessee. The contractor will be required to submit a site-specific health and safety plan that addresses the major components of the work and associated hazards.

8. ACCESS

The Site will be enclosed with a fence as described in Section 2.7 of the Closure Plan. The landfill is accessed via Sam Pitts Road from a single entrance along at John Davison Rockefeller Memorial Highway (State Route 70), which is secured when the landfill is closed by a double-swing pasture gate. Temporary access roads will be constructed as necessary during closure to facilitate installation of the final cover system and other closure components.

9. TRAINING

The Contractor retained by the Lessee to perform inspections and maintenance on the stormwater management system shall become familiar with this OMP, the Closure Plan and associated Closure Drawings. The Contractor shall provide a written statement that the superintendent of the team implementing this OMP has read and is familiar with the requirements of these documents. In addition, health and safety training associated with the site include an initial site orientation training. Should maintenance repairs require intrusive work into the final cover system, additional OSHA 10- and 30- Hour Construction Safety Training, and HAZWOPER Site Controls certifications shall be provided for the team members performing the intrusive work.

10. WARRANTIES

There are no specific equipment warranties associated with the Closure Plan.

11. REPORTING

Quarterly inspection reports shall be maintained on-site and include inspection results and any associated repair logs.

12. ESTIMATED COST AND FINANCING

The annual maintenance budget for known routine maintenance activities associated with the Landfill Closure are detailed in the Closure Plan as summarized below. Unscheduled operation and maintenance may be required on special occasion either during or after large infrequent flood storm event. The annualized effort budget estimated for routine maintenance of the stormwater system described in this OMP is summarized as follows:

Table 2. Estimated Maintenance Cost

Stormwater Management System	**Total Projected Annual Maintenance Budget**
Vegetated Swales	$20,000
Energy Dissipation Pads	$5,000
Spillways	$5,000
Sediment Forebays	$5,000
Bioretention Basins	$8,000
Infiltration Basins	$20,000

13. OMP APPENDICES

The following documentation is attached to this OMP:

Appendix A –Maintenance Tables

Appendix B –Maintenance Log

Appendix C – OMP Cross Reference to Pinelands Conservation Management Plan Requirements

Appendix D – Lease Agreement

APPENDIX A

MAINTENANCE TABLES

Manchester Landfill Closure
Stormwater Management System
Maintenance Tables

Best Management Practice	Maintenance Activity	Approximate Frequency
Diversion Berms	Inspect diversion berms for accumulated sediment and debris, evidence of erosion or overtopping, rodent holes and woody vegetation. Inspect for cracking; spalling; deterioration from freezing, channel obstructions; and scour at inlet and outlet.	Quarterly
	Remove accumulated sediment and debris from localized areas of accumulation. Stabilize the denuded area where sediment was removed with seed and temporary erosion control blanket per the Closure Plan and Closure Drawings.	
	Remove established woody vegetation from the diversion berm flow path.	
	Repair disrupted and eroded sections of diversion berms per the Closure Plan and Closure Drawings. Correct any overtopping that has occurred by re-establishing the diversion berm to the design dimensions on the Closure Drawings. Stabilize any earth work with temporary seed and erosion control blanket.	
	Inspect outlets of diversion berms where diversions discharge into a downstream stormwater management facility or feature. Identify areas of erosion and if bypass is occurring at the connection. Repair eroded areas and correct drainage bypass if occurring.	
Downchutes	Inspect riprap-lined downchutes for accumulated sediment and debris, evidence of erosion or overtopping, erosion of bedding material by observing slumping of riprap, and woody vegetation.	Twice per year
	Remove accumulated sediment and debris from localized areas of accumulation.	
	Remove any established woody vegetation from the diversion berm.	
	Repair eroded sections of diversion berms to the original dimension and lining per the Closure Plan and Closure Drawings	
	Inspect outlets of downchutes where discharge into a sediment forebay (see Sediment Forebay for maintenance requirements)	
Conveyance Pipes	Inspect inlets and outlets of conveyance pipes for debris and/or clogging. Remove accumulated sediment and debris from localized areas of accumulation	Quarterly
	Inspect outlets of conveyance pipes at discharge locations into riprap energy dissipation pads. Repair and replace riprap as needed (see also Riprap Energy Dissipation Pads for maintenance requirements)	
Access Road	Inspect access road for evidence of erosion. Repair erosion of the road surface. Minor regrading may be required to reduce potential for concentrated flow along road.	Quarterly

Best Management Practice	Maintenance Activity	Approximate Frequency
Infiltration Trench and Basin	Inspect all structural components of the basin for cracking, subsidence, spalling, erosion and deterioration. Inspect side slopes for erosion, repair rills and replace denuded vegetation according to the landscape plan	Quarterly
	Remove debris from basin	
	Inspect forebay structure, remove debris, clear clogged orifice (if any)	
	Visually inspect maintenance access ramp for vegetation with woody stems that exceed 1 inch in diameter that has established and would limit access into the basin. Remove vegetation as required to maintain access into the basin via the maintenance ramp	
	Inspect riprap energy dissipation for evidence of flow bypass and erosion, restore riprap so that flow is channelized through center of riprap. See also Riprap Energy Dissipation Pads.	
	The basin must be inspected to determine if the permeability of the basin has decreased. If the actual drain time is longer than the design drain time, the components must be evaluated and appropriate restoration measures taken to return the infiltration basin to the design condition. Measures to restore infiltration capacity may include sediment removal from the surface of the trench or basin bottom with subsequent annual tilling of the sand layer, using lightweight equipment.	Twice per year
Riprap Energy Dissipation Pads	Inspect riprap lining for accumulated sediment and debris and evidence of scour or erosion of bedding material by observing slumping of riprap. Inspect sides and downstream edge of riprap apron for evidence of erosion.	Quarterly
	Remove accumulated sediment and debris from localized areas of accumulation.	
	Restore riprap lining in areas of dislodged riprap or erosion. Additional riprap may be required along edges of riprap pad to reduce potential for on-going erosion in these areas.	
Sediment Forebay	Remove accumulated sediment and debris from forebay at the specified frequency and when sediment accumulates to 50 percent of the overall forebay depth. Restore riprap or sand surface after sediment removal is complete.	Twice per year
	Inspect outlet of discharge pipe at sediment forebay and remove any accumulated sediment from pipe outlet.	
Bioretention Basin	Inspection of structural components for cracking, subsidence, spalling, erosion and deterioration.	Annually
	Components expected to receive and/or trap debris and sediment must be inspected for clogging at least four times annually	Quarterly
	Inspect vegetated areas bi-weekly when establishing/restoring vegetation, and a minimum of one inspection during the growing season and one inspection during the non-growing season is required ensure the health, density and diversity of the vegetation.	
	Vegetative cover must be maintained at 85%; damage must be addressed through replanting in accordance with the original specifications. Vegetated areas must be inspected at least once annually for erosion, scour and	Inspect once annually, replant as needed

	unwanted growth.	
	Inspect planting bed to determine if the permeability of the bed has decreased.	Twice per year
	If the bioretention system fails to drain the Water Quality Design Storm within 72 hours, corrective action must be taken and the maintenance manual revised accordingly to prevent similar failures in the future.	

The Operation and Maintenance Log is intended for stormwater improvements described in the Operations and Maintenance Plan for the stormwater management features associated with the Manchester Landfill Closure.

OMP Cross Reference to Pinelands Conservation Management Plan Requirements

Pinelands Commission Stormwater Checklist Supplement

The sections below specifically address the Pinelands Commission Stormwater Checklist item 16 for the stormwater Maintenance Plan.

16. *The General Inspection, Maintenance and Repair Plan shall contain the following [NJAC 7:50-6.84(a)6vii]:*
    - I. *Accurate and comprehensive drawings of the site's stormwater management measures;*
        - *i.* The drawings attached to the Landfill Closure and Post-Closure Care Plan show the site's stormwater management measures in detail.
    - II. *Specific locations of each stormwater management measure identified by means of longitude and latitude as well as block and lot number;*
        - *i.* **Section 2** includes the Lat / Long as well as block and lot number.
    - III. *Specific preventative and corrective maintenance tasks and schedules for such tasks for each stormwater BMP;*
        - *i.* **Appendix A – Maintenance Tables** includes relevant preventative maintenance and schedules for the stormwater management measures.
    - IV. *Cost estimates, including estimated cost of sediment, debris or trash removal;*
        - *i.* **Table 2** includes estimated cost of maintenance activities.
    - V. *The name, address and telephone number of the person or persons responsible for regular inspections and preventative and corrective maintenance including repair and replacement;*
        - *i.* Manchester Township and NextGrid are jointly responsible for regular inspections, preventative maintenance, and corrective maintenance
            - *a.* Manchester Township
                a. Carl Block
                b. cblock@manchestertwp.com
                    i. 732-657-8121
                    ii. 1 Colonial Drive, Manchester Township, New Jersey 08759
            - *b.* NextGrid Manchester Landfill, LLC
                a. Daniel Serber
                b. 177 Huntington Ave, Suite 1703, Unit 73069, Boston, Massachusetts 02115

VI. *Reporting records for maintenance;*

i. Manchester Township will maintain records for maintenance performed on the site.

VII. *A description of the financing that will ensure the inspection, maintenance and repair of all stormwater management BMPs;*

i. Appendix D includes a development agreement containing the responsibilities of the owner and lessee on the inspection, maintenance and repair of stormwater management BMPS.

VIII. *The plan must address existing tree and vegetation protection during construction;*

i. Although the spatial footprint of the stormwater BMPs was minimized during the design process, some existing vegetation will need to be removed during the construction process. Surrounding off-site vegetation will be protected by implementation of the soil erosion and sediment control plan.

IX. *A statement that an inspection, maintenance and repair report will be updated and submitted annually to the municipality;*

i. Not applicable. The Township, as the property owner, will be responsible for inspections and reporting as part of the Closure Plan.

X. *A description of all preservation measures and maintenance procedures for all non-structural stormwater management measures; and*

i. The non-structural components of the stormwater management plan include stabilized vegetation that will cover the landfill. The Closure Plan requires that the site is stabilized and regularly maintained. Vegetative maintenance is covered in Section 2.2 of the Closure Plan.

XI. *A description of all stormwater management measure easements designed to facilitate inspections and maintenance as necessary.*

i. No easements are necessary for this site.

APPENDIX D

LEASE AGREEMENT

#22-093

RESOLUTION OF THE TOWNSHIP COUNCIL OF THE TOWNSHIP OF MANCHESTER, COUNTY OF OCEAN, STATE OF NEW JERSEY, APPROVING ACCEPTANCE AND EXECUTION OF THE FIRST AMENDMENT FOR LEASE AGREEMENTS WITH NEXTGRID MANCHESTER LANDFILL LLC

WHEREAS, the Township Council of the Township of Manchester, County of Ocean, State of New Jersey (hereinafter referred to as the "Township") has previously entered into a Land Lease Agreement ("Agreement") with NextGrid Manchester Landfill, LLC (hereinafter referred to as "NextGrid"); and

WHEREAS, the Lease Agreement is dated January 20, 2020, and pertains to the proper closure of the Township landfill and the instillation of solar panels on the landfill, all at the cost of NextGrid; and

WHEREAS, the original terms of the Agreement provided that the development period would commence on the effective date and terminate 12 months thereafter; and

WHEREAS, the Agreement provided that the effective date would be the date that the Agreement was fully executed by all parties; and

WHEREAS, pursuant to the plain language of the Agreement, the development period should have commenced, but because of environmental and regulatory issues, although diligently pursuing the approvals, NextGrid has not yet received all necessary approvals from NJDEP and the Pinelands Commission; and

WHEREAS, the Township acknowledges that although the development period expired on or about January 27, 2021, by its own terms and conditions, and was inadvertently not extended by agreement between NextGrid and the Township, furthermore the parties recognize that the project is ongoing and must be completed in order to provide for the best result for the taxpayers and citizens of the Township; and

NOW, THEREFORE, BE IT RESOLVED, this 14th day of February 2022, by the Township Council of the Township of Manchester, County of Ocean, State New Jersey as follows:

1. The Township agrees to amend the aforementioned Agreement to provide that Section 5(b) of the Agreement shall read:

   "The Development Period shall commence on the effective date and Terminate on the Lease Commencement date."

2. Other than as modified herein the Township reaffirms the Agreement dated January 20, 2020.

3. The Township authorizes and directs the Mayor and Municipal Clerk to execute any and all necessary documents in order to implement the intent of this Resolution.

BE IT FURTHER RESOLVED that a certified copy of this Resolution shall be forwarded by the Municipal Clerk to the following:

(a) The Honorable Robert Hudak, Mayor;
(b) Joan Brush, Council President;
(c) Brandon Umba, Township Administrator;
(d) Robert Mullin of Colliers Engineering;
(e) Jerry J. Dasti, Esquire;

CERTIFICATION

I, Sabina T. Martin, Clerk of the Township of Manchester, County of Ocean, State of New Jersey, do hereby certify the foregoing to be a true and correct copy of a Resolution adopted by the Township Council at a meeting held on the **24th day of January 2022**.

Sabina T. Martin, RMC
Municipal Clerk

FIRST AMENDMENT TO LAND LEASE AGREEMENT

This First Amendment to the Land Lease Agreement ("Amendment") is entered into as of December 14, 2021 ("Effective Date") by and among Town of Manchester NJ (the "Lessor") and NextGrid Manchester Landfill LLC (the "Lessee") (each a "Party" and together, the "Parties").

Recitals

WHEREAS, the Parties entered into that certain Land Lease Agreement on January 20, 2020 (the "Agreement"); and

WHEREAS, the Parties wish to amend provisions of the Agreement set forth below pursuant to Section 30 of the Agreement.

NOW, THEREFORE, in consideration of the premises and the mutual covenants contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

1. Capitalized Terms. Capitalized terms used herein without meaning shall have the meaning given to such terms in the Agreement.

2. Amendments.

   a. **Section 5(b)**: Substitute the section such that Section 5(b) shall state, "The Development Period shall commence on the Effective Date and terminate on the Lease Commencement Date."

3. Reaffirmation. Except as expressly amended by this Amendment, all other terms, covenants and conditions contained in the Agreement shall remain in full force and effect and are hereby ratified and confirmed in all respects.

4. Headings. The headings contained herein are solely for convenience of reference and shall not be deemed to have substantive meaning.

5. Counterparts. This Amendment may be executed in any number of counterparts and by different parties hereto in separate counterparts, each of which shall be deemed to be an original, but all of which taken together shall constitute one and the same agreement. Delivery of an executed counterpart of this Amendment by telefacsimile or electronic mail shall be equally as effective as delivery of an original executed counterpart of this Amendment.

6. Entire Agreement. The Agreement, as amended by this Amendment, constitutes the entire understanding and agreement between the parties hereto with respect to the subject matter hereof and supersedes any and all prior or contemporaneous agreements or understandings with respect to the subject matter hereof, whether express or implied, oral or written.

[Signature Page to Follow]

IN WITNESS WHEREOF, the Parties have executed this Amendment as of the date first above written.

Lessor:	**Lessee:**
Town of Manchester NJ By: _____ Name: Title:	**NextGrid Manchester Landfill LLC** By: _____ Name: Doug Williams Title: Managing Member

EXHIBIT E
MEMORANDUM OF LEASE

RECORDING REQUESTED BY AND
WHEN RECORDED RETURN TO:

(SPACE ABOVE THIS LINE FOR RECORDER'S USE)

MEMORANDUM OF LEASE

THIS MEMORANDUM OF LEASE (this "**Memorandum**") is made as of January 27, 2020 (the "**Effective Date**") by and between the Manchester Township ("**Lessor**") and NextGrid Manchester Landfill LLC ("**Lessee**"). Such parties are collectively referred to herein as the "**Parties**" and individually as a "**Party**."

RECITALS

A. Lessor and Lessee are entering into a Lease Agreement dated as of the same date of this Memorandum and referred to in this Memorandum as the "**Lease**". The Lease pertains to certain premises depicted on Exhibit B attached hereto (the "**Leased Premises**"). The Leased Premises are a portion of the land legally described on Exhibit A attached hereto.

B. Lessor and Lessee desire to put third parties on notice of some of the terms and provisions of the Lease.

NOW THEREFORE, in consideration of the foregoing Recitals and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties hereby agree as follows:

1. **INCORPORATION OF TERMS.** All of the terms and provisions of the Lease are incorporated in this Memorandum by this reference with the same force and effect as of set forth in full in this Memorandum. Capitalized terms used in this Memorandum without definition will have the same meanings as set forth in the Lease. In the event of any inconsistency between the terms of this Memorandum and the Lease, the terms of the Lease will prevail as between Lessor and Lessee.

2. **LEASE OF PREMISES.** By this Memorandum and by the Lease, as of the Effective Date, Lessor hereby leases the Leased Premises to Lessee and Lessee leases the Leased Premises from Lessor.

3. **LEASE TERMS.** Among other things, the Lease provides the following:

   3.1. Term. The Lease provides that the original term of the Lease will be approximately twenty five (25) years, with three (3) options for Lessee to extend the term of the Lease, each for a five (5) year period, which Lessee may exercise in its sole discretion.

   3.2. Use. Lessee is granted the right to use and occupy the Leased Premises for installing and operating one or more solar photovoltaic electric generating systems, designed to produce electricity and deliver such electricity to the electric interconnection point, and all related appurtenances.

   3.3. Other Terms. The Lease contains other terms, as more fully set forth therein. In the event of a conflict between the terms of the Lease and the terms of this Memorandum of Lease, the terms of the Lease shall control

4. **GENERAL.** This Memorandum and the Lease shall be binding upon and inure to the benefit of the Parties and their respective transferees, successors and assigns. This Memorandum may be executed in counterparts, each of which, when taken together, will constitute one and the same instrument. All Exhibits attached to this Memorandum are incorporated herein by this reference.

IN WITNESS WHEREOF, Lessor and Lessee have executed this Memorandum as of the day and year first above written.

LIST OF ATTACHMENTS

Attachment A Soil Analytical Evaluation for Reuse of On-Site Soils for Landfill Capping

1. INTRODUCTION AND BACKGROUND

1.1 Terms of Reference

This Material Acceptance Protocol (MAP) is being provided with the Landfill Closure and Post-Closure Care Plan (Closure Plan) for the proposed closure of the Manchester Township Landfill. Geosyntec Consultants, Inc. (Geosyntec) has prepared this MAP on behalf of NextGrid Manchester Landfill, LLC, Inc. of Boston, Massachusetts (Developer) in accordance with the New Jersey Department of Environmental Protection (NJDEP) regulations for sanitary landfills promulgated by New Jersey Administrative Code (N.J.A.C.) 7:26-2A.9 (solid waste regulations).

1.2 Objectives of Material Acceptance Protocol and Fill Use Plan

The objective of the MAP is to describe the procedures and standards for importing and using off-site soil and aggregate materials (fill material) in the Manchester Township Landfill closure. Specifically, the MAP describes the identification, evaluation, acceptance, and tracking of off-site soils and aggregate in accordance with N.J.A.C. 7:26-2A9(e)(4)(xx).

1.3 Contact Information

The Landfill is currently owned by Manchester Township. The contact information of the primary parties involved in the closure is presented below.

Owner
Carl Block, Administrator
Manchester Township
1 Colonial Drive
Manchester, N.J. 08759
732-657-8121

Developer
Daniel Serber
NextGrid Manchester Landfill, LLC, Inc.
177 Huntington Ave, Suite 1703
Unit 73069
Boston, Massachusetts 02115

Engineer of Record
Thomas Ramsey, P.E.
10211 Wincopin Circle, 4th Floor
Columbia, Maryland 21044
410-707-6607

2. PROPOSED FILL MATERIALS AND SOURCES

The proposed uses and approximate quantities of fill material required for the closure of the Manchester Township Landfill are described below. The landfill closure will include the use of up to approximately 152,000 cubic yards (CY) of fill material. Descriptions of the materials, anticipated uses, quantities, and sources are provided below. The features described below are shown on Drawing 4 and in detail on Drawings 5 and 6 of the Permit Drawings (Attachment B to the Closure Plan).

- Cover Soil (100,000 CY) will be fine to coarse sand placed above the subgrade surface as the first layer of the permeable soil final cover system. Cover Soil will be sourced from (i) spoils from the excavation of the stormwater infiltration basins; (ii) an onsite borrow area to be excavated during closure construction; and (iii) imported from a commercial quarry or sand pit.
- Topsoil (25,000 CY) will be vegetative support soil placed above the Cover Soil to support vegetation and minimize erosion of the final cover system. Topsoil will be sourced from an off-site source or manufactured on-site from sand excavated from the on-site borrow area and compost or other amendment from an off-site source.
- Riprap (5,000 CY) will be used to construct various components of the stormwater management system. Riprap will be virgin broken stone meeting the size requirements shown on the Drawings sourced from a commercial quarry.
- Crushed Stone and Coarse Aggregate (12,000 CY) will be used to construct the access roads and aggregate surfaced compost and recycling areas, passive landfill gas vents, as bedding for stormwater culverts, levelling pads for the solar panel ballast blocks, and for drainage swale check dams. Crushed Stone will be clean stone conforming to the New Jersey Department of Transportation (NJDOT) requirements for No. 3 and No. 57 Aggregates and will be sourced from a commercial quarry.
- Dense Graded Aggregate (DGA) (10,000 CY) will be used to backfill the public recycling area. DGA will meet the NJDOT requirements for Dense-Graded Aggregate and will be sourced from a commercial quarry.

The specific required physical, geotechnical, and chemical properties of the fill materials are described in the Construction Specifications, which are included as Attachment F to the Closure Plan. The specific source(s) and materials will be selected during the construction phase in accordance with the evaluation procedures described in Section 2 of this MAP. Actual sources and material properties for each of the fill materials will be provided in the construction certification report.

3. IMPLMENTATION OF THE MAP

Imported materials will be subject to pre-qualification and conformance measures to track and document the source history, testing, transport, and placement of imported fill material as described in the following sections.

3.1 Prequalification of Fill Sources

Cover Soil from On-Site Sources

Cover Soil sourced from the excavation of stormwater management basin or the onsite borrow area are characterized based on various field investigations, which indicate that the subsurface generally consists of a fine to coarse sand. Because the source is on-site and the subsurface conditions and materials are well understood, no additional pre-qualification is required.

Topsoil

Topsoil imported from a topsoil manufacturing facility or other off-site source will be prequalified based on testing one sample for the physical and geotechnical properties required by the Construction Specifications and an evaluation of historical chemical testing data. Results of that evaluation will be submitted to the NJDEP Bureau of Sustainable Waste Management (BSWM) for approval prior to being approved by the Developer as a qualified source.

Topsoil sourced from the excavation of stormwater management basins or the onsite borrow area will not require prequalification.

Riprap, Crushed Stone, Dense-Graded Aggregate, and Imported Cover Soil

For each off-site source of Riprap, Crushed Stone, DGA, and Cover Soil proposed by the Contractor, the Contractor will submit source information, geotechnical laboratory test data meeting the requirements of the specifications, and any other requested information to the satisfaction of the CQA Consultant. Source information will include, at a minimum, documentation that the quarry is authorized to operate as a commercial quarry by relevant state authorities and that the material is consistent with the following:

- Excavated from undisturbed geologic formations;
- Obtained from a licensed quarry/mine;
- Not located on or impacted by other contaminant sources;
- Not comingled with any other material;
- Not known or suspected of being contaminated;
- Not adversely impacted by discharges of hazardous materials or chemical application;

- Not affected by conditions or processes that would result in the introduction of contaminants into the licensed quarry/mine material in concentrations above regulatory concern; and
- Not affected by conditions or processes that would increase the concentrations of contaminants already present in the licensed quarry/mine material to concentrations above regulatory concern.

If, at the discretion of the CQA Consultant, the proposed source is acceptable based on the information provided, the source will be considered prequalified as a material source. Following pre-qualification, conformance testing, as described in Section 3.2, will be performed prior to material being approved for use on-site.

Prequalification information will be submitted through a formal submittal process to be described in the Construction Specifications. For each submittal, the CQA Consultant will provide a formal response documenting whether the provided information is adequate to prequalify the proposed source. The submittals and responses will be included in the construction certification report.

3.2 Conformance Testing and Acceptance

During construction, conformance testing will be performed on an ongoing basis at a frequency described herein and in the Construction Documents to ensure the imported material is consistent with that evaluated during the prequalification and conformance phases. Requirements for conformance testing of each material are described below.

Cover Soil from On-Site Sources

Cover Soil will be subject to physical and geotechnical properties testing to verify conformance with the Construction Specifications at a frequency of one test per 5,000 cubic yards and any portion thereof placed.

Cover Soil will also be subject to conformance chemical testing. Chemical tests will be performed to evaluate concentrations of constituents on the target compound list (TCL)/target analyte list (TAL) and extractable petroleum hydrocarbons (EPH) in accordance with the Reduced Sampling Scheme in Table 2 of the NJDEP Site Remediation Program's (SRP) *Fill Material Guidance for SRP Sites, Version 3.0, 4/2015* (FMG). Results will be compared to the most stringent of the NJDEP Residential and Non-Residential Ingestion-Dermal and Inhalation Soil Remediation Standards.

Cover Soil to be sourced from excavation of the stormwater management basins has previously been evaluated according to the analytical requirements above and is acceptable for use onsite (Attachment A). Field observations of the geotechnical properties of the material during previous site investigations indicate that native sand material is acceptable for use as cover soil.

Topsoil

Topsoil imported from a topsoil manufacturing facility or other off-site source will be subject to physical and geotechnical properties testing to verify conformance with the Construction Specifications at a frequency of one test per 5,000 cubic yards and any portion thereof placed.

Topsoil imported from a topsoil manufacturing facility or other off-site source will also be subject to conformance chemical testing. Chemical tests will be performed to evaluate concentration of constituents on the TAL/TCL and EPH in accordance with the Reduced Sampling Scheme in Table 2 of the FMG. Results will be compared to the most stringent of the NJDEP Residential and Non-Residential Ingestion-Dermal and Inhalation Soil Remediation Standards.

Topsoil to be sourced from excavation of the stormwater management basins has previously been evaluated according to the analytical requirements above and is acceptable for use onsite (Attachment A). Prior to placement on the landfill, the topsoil will be subject to geotechnical/agricultural properties and, if necessary, be amended following placement to meet the requirements of the Specifications. Amendments (e.g., lime to raise pH and/or compost to increase organic content) will be sourced from commercial and/or permitted sources.

Riprap, Crushed Stone, Dense-Graded Aggregate, and Cover Soil from Off-Site Sources

Riprap will not be subject to specific conformance testing but will be visually inspected upon delivery to the site to verify that it meets the size requirements of the Construction Specifications. A bill of lading will be collected with each load of Riprap delivered to verify that the material was delivered from a prequalified source.

Crushed Stone, DGA, and Cover Soil from Off-Site Sources will be subject to visual inspection and particle-size analysis to verify conformance with the Construction Specifications at a frequency of one test per 10,000 cubic yards and any portion thereof placed. Bills of lading for each Crushed Stone and DGA load will be collected to verify that the material was delivered from a prequalified source.

Riprap, Crushed Stone, DGA, and Cover Soil from Off-Site Sources will not be subject to conformance chemical testing if the materials are virgin material from licensed commercial sources (e.g., a licensed quarry). Riprap, Crushed Stone, DGA, and Cover Soil from non-commercial sources will be tested as described for Topsoil and Cover Soil from On-Site Sources.

3.3 Handling, Placement, and Tracking of Fill Materials

Fill material will be loaded, transported, stockpiled, and placed using traditional earthmoving equipment. Imported fill material will generally be placed immediately upon delivery to the Site to minimize handling. However, in the case where materials are stockpiled onsite, stockpiles will be located within portions of the proposed Borrow Area that have not yet been excavated such that the material is not impacted by waste, chemicals used during construction, or other potential contaminants. The area will be prepared by removing surface debris and fill prior to stockpiling.

To ensure all shipments of material received are approved materials from approved sources, the contractor will collect bills of lading for material imported to the Site and provide copies to the Developer and CQA Consultant. The CQA Consultant will review the bills of lading to confirm that the source and material are consistent with those tested and ordered for delivery. If a bill of lading indicates that a material is not an approved material, the material will not be unloaded unless the Contractor can demonstrate that the material has been approved. If the material is confirmed to be a non-approved material, it will not be unloaded at the Site and will be returned to the source listed on the bill of lading.

The Contractor will be responsible for tracking quantities of material received on-site. Tracking may comprise maintaining truck counts of all materials imported, stockpiled, and placed onsite to allow for an estimate of the volume placed at receiving locations. The Contractor's surveyor will be responsible for surveying the as-built conditions at various milestones during construction to document the volumes of material placed.

3.4 Documentation

To demonstrate compliance with the MAP, prequalification, conformance evaluation, and onsite material tracking will be formally documented in submittals, submittal responses, laboratory reports, and daily field reports, all of which will be appended to the construction certification report.

Memorandum

Date: May 8, 2025

To: Daniel Serber, NextGrid Manchester Landfill, LLC

From: Mike Nolden and Ed Horai, Geosyntec Consultants

Subject: Soil Analytical Evaluation for Reuse of On-Site Soils for Landfill Capping
Manchester Township Landfill Closure
Manchester Township, Ocean County, New Jersey

BACKGROUND AND SITE INFORMATION

This memorandum is being provided to support the forthcoming Landfill Closure and Post-Closure Care Plan (Closure Plan) for the proposed closure of the Manchester Township Landfill (landfill). The landfill is located at 110 Sam Pitts Road in Manchester Township, Ocean County, New Jersey (Site). The New Jersey Department of Environmental Protection (NJDEP) identifies the Site as a solid waste facility with Program Interest (PI) #132555. The property and landfill are owned by Manchester Township and will be undergoing landfill closure and solar development under the direction of NextGrid Manchester Landfill, LLC. The landfill is situated on an approximately 30-acre parcel, and the proposed closure covers an area of approximately equal size. As discussed with the NJDEP on a 20 February 2025 conference call, the Closure Plan will describe the proposed closure and solar development activities at the Site. The Material Acceptance Protocol (MAP), which will be appended to the Closure Plan, will describe the requirements for evaluating soils to be used to perform the closure.

The purpose of this memorandum is to present the results of the sampling and analysis conducted to characterize native soil at the Site for use as cover soil. At the time of sampling, we estimated 58,000 cubic yards (cy) of cover soil and 11,000 cy of topsoil will be sourced from the proposed stormwater management basins (Basins) (**Figure 1)**. During the sampling event described in this memorandum sufficient samples were collected to characterize 11,000 cy of topsoil and the uppermost approximately 46,000 cy of cover soil. Sampling of the deeper cover soil (i.e., those samples deeper than 8 feet below ground surface [ft bgs]) will be deferred to a second mobilization after construction begins but before soil excavation commences. The reasoning behind this deferment is that the deeper samples required a larger excavator to reach, and, therefore, require trees and brush to be cleared for sampling. Further, modifications to the proposed stormwater basins since sampling, specifically increasing the size of Basin 1A, will also require additional sampling. We have not yet prepared a plan to sample the soil from the additional area within the modified Basin 1A. Upon sampling the remaining soil, we will prepare a similar memorandum to summarize the sampling and results.

The Basins encompass an area of approximately 6.59 acres (287,000 square feet) and subsurface soil consists of fine to coarse sand. As described in the MAP, soils from the Basins are to be characterized in accordance with the NJDEP Site Remediation Program's (SRP) Fill Material Guidance for SRP Sites, Version 4.0, October 2021 (FMG) to demonstrate suitability for use as cover soil.

SOIL CHARACTERIZATION SAMPLING

The Basins include six individual areas (Basins 1A, 1B, 2A, 2B, 3 and 4), as shown on **Figure 1**, and samples were collected from each area with a total of 83 samples (59 cover soil and 24 topsoil) taken from 36 test pit locations. The topsoil depth encountered, and therefore topsoil samples collected, in each Basin ranged from 0 to 2 ft bgs. The approximate volume of each Basin and the number of samples collected from each Basin are shown on **Table 1**. The depths from which samples were collected are summarized in **Table 2**. As described above, the remaining volume of cover soil to be sampled during a future mobilization consists of, at a minimum, an additional 12,000 cy which will be characterized via 12 additional samples, per the MAP and SRP FMG. Furthermore, because it is anticipated that Basin 1A will increase in size to maximize use of onsite soils for landfill closure, additional samples will be collected such that all Basin 1A soils are characterized in accordance with the MAP and SRP FMG.

On January 21st through 27th, 2025, test pits were excavated in Basins 1A through 4 (**Figure 1**) via a mini excavator operated by a Geosyntec subcontractor. Geosyntec oversaw the test pit excavation onsite and visually inspected the soils to identify the materials in the Basins such that soil samples were collected only from the target material (i.e., topsoil or cover soil), from the prescribed depths, and that no visible waste was present in the test pits.

During this mobilization, Geosyntec collected 59 cover soil samples and 24 topsoil samples (**Table 1**), which represents a frequency of one sample for each approximately 780 cy of cover soil and 458 cy of topsoil based on the current volume estimates. As previously stated, at a minimum an additional 12 soil samples at deeper depths from the areas shown on Figure 1 will be collected during a future mobilization to characterize the remaining approximately12,000 cy of cover soil.

Pursuant to the NJDEP FMG, soil samples were analyzed for Target Analyte List/Target Compound List plus 30 (TAL/TCL+30) and Extractable Petroleum Hydrocarbons (EPH). Analysis was performed by Eurofins Environment Testing Northeast, LLC (Eurofins). Results of soil samples collected from the Basins were compared to the applicable NJDEP Remediation Standards pursuant to N.J.A.C. 7:26D. Pursuant to the NJDEP Evaluation of Extractable Petroleum Hydrocarbons in Soil Technical Guidance (Version 1.0, June 2019) (EPH guidance), results for soil samples analyzed for EPH were compared to the default Ecological Screening Criteria (ESC), the default EPH product limit, and the residential and non-residential EPH Soil Remediation Criterion (SRC) values, respectively. Pursuant to Tables 1 through 5 of the NJDEP Remediation Standards (N.J.A.C. 7:26D), soil samples analyzed for TAL/TCL+30 were

compared to the NJDEP Soil Remediation Standards (SRS) for the Ingestion-Dermal Exposure Pathway – Residential (IDEP-R), Ingestion-Dermal Exposure Pathway – Non-Residential (IDEP-NR), Inhalation Exposure Pathway – Residential (IEP-R), Inhalation Exposure Pathway – Non-Residential (IEP-NR), and Migration to Ground Water Exposure Pathway (MGWEP) for all parameters.

Geosyntec collected samples for quality assurance/quality control (QA/QC) purposes, which included one field blank per day of sampling, one duplicate sample and one matrix spike/matrix spike duplicate (MS/MSD) per 20 parent soil samples, and one Trip Blank per sample shipment. Consistent with the samples collected from the Basins, the QA/QC samples were analyzed for the TAL/TCL+30 and EPH.

Following sample collection, all test pits were backfilled with soils excavated from that location such that the area was restored to match pre-investigation conditions to the extent feasible. No investigation derived waste (IDW) was generated during this event.

During this mobilization, no visible waste was observed in the test pits excavated. However, during construction onsite Construction Quality Assurance (CQA) personnel will determine the suitability of the excavated soils based on visual observation. Only soils visually consistent with the native soil (i.e., yellow-brown fine to medium well-sorted sand) will be used as cover soil. All other material will be removed from the Basins and stockpiled outside of the project area.

ANALYTICAL RESULTS

Of the 83 samples collected during this event, there was only one analyte concentration that exceeded the most stringent applicable NJDEP SRS (Pursuant to NJAC 7:26D). Results from sample 2A-01-TS, which is a topsoil sample from Basin 2A, indicated a mercury concentration of 0.14 mg/kg which exceeds the NJ SRS Migration to Groundwater (MGW) standard of 0.10 mg/kg. The Synthetic Precipitation Leaching Procedure (SPLP) was conducted for mercury on this sample for comparison to the NJ SRS Leachate MGW standard of 40 ug/L. The SPLP resulted in a leachate mercury concentration below the Minimum Detection Limit (MDL) of 0.091 ug/L. Additionally, the mercury detection of 0.14 mg/kg is equal to the 90th percentile of background concentrations for the Coastal Plain Province, as stated in Table 1 of the Ambient Level of Metals in New Jersey Soils – NJDEP Research Project Summary (May, 2003). Therefore, these results are not cause for further testing or rejection of the soil represented by this sampling event. The full laboratory reports from Eurofins are included in **Attachment 1**.

Note that due to the sequencing of the laboratory analyses, approximately half of the cover soil samples from each basin were put on hold pending the results of the first half of the samples. This resulted in several samples from each basin being analyzed outside the formal hold time. However, in this case, we consider the results to be acceptable because hold times are most critical for VOC analytes and (1) there are no field observations to indicate the presence of VOCs, (2) the PID used during sampling did not indicate the presence of VOCs, and (3) there

are no results from testing performed within hold times to indicate the presence of VOCs near or above the relevant standards.

CLOSING

A soil sampling plan, designed in accordance with the MAP and based on Geosyntec's experience with similar sampling, was executed to obtain analytical data on proposed stormwater management basin soils in Basins 1A, 1B, 2A, 2B, 3 and 4 to demonstrate its suitability for use as cover soil in accordance with the Closure Plan. The samples were collected and analyzed, according to applicable NJDEP SRP requirements for clean fill material, for TAL/TCL + 30 and EPH. As put forth in the MAP, the results of these samples were compared against the most stringent NJDEP Residential and Non-Residential-Dermal and Inhalation SRS. In accordance with the MAP and SRP Fill Guidance, the results indicate that the soils in Basins 1A, 1B, 2A, 2B, 3 and 4 are suitable for unrestricted reuse in the proposed landfill closure without further testing.

Deeper soils (i.e., those more than 8 ft bgs) within the Basins and soils from the additional areas of Basin 1A will be characterized using a similar sampling scheme prior to their use as cover soil.

* * * * *

Table 1: Proposed Stormwater Management Basin Volumes and Soil Sampling Summary

Basin ID	Volume Cut (cy)	Total Depth Sampled (ft bgs) (1)	Total # of Test Pits	Total # of Samples (1)	
				Topsoil	Cover Soil
Basin 1A	17,565	8	7	6	12
Basin 1B	7,805	8	6	4	9
Basin 2A	24,110	8	9	4	16
Basin 2B	11,311	8	7	5	12
Basin 3	2,822	8	3	2	4
Basin 4	4,673	8	4	3	6
Total	68,286	-	36	24	59
Total Samples				**83**	
Notes:	1. Total depth Sampled and number of samples are for samples collected during the event described in this memorandum. Deeper soils (i.e., those more than 8 ft bgs) within the Basins and soils from the additional areas of Basin 1A will be characterized using a similar sampling scheme prior to their use as cover soil.				

Table 2: Sample Summary by Location and Depth

Basin ID	Test Pit ID	Topsoil (ft bgs)	Cover Soil Sample Depth (ft bgs)	
		0 - 2	4	8
Basin 1A	1A-01	X	X

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS VOA TICs

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
U	Indicates the analyte was analyzed for but not detected.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
A	The tentatively identified compound is a suspected aldol-condensation product.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Qualifiers (Continued)

General Chemistry (Continued)

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-319135-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 1/21/2025 4:50 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.2°C and 1.2°C.

Receipt Exceptions
The following sample(s) was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): 2 TB vials. Per laboratory policy the Trip Blank sample date/time was added to reflect the latest sample date/time of the sampling event.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. Received 14 containers for sample #8 (FB) not 16 as recorded on the COC.

The following samples were activated for remaining total analysis for Metals, PCBs and out of analytical holding time for Volatiles, Semivolatiles, Pesticides, Cyanide, NJEPH and Mercury by the client on 2/28/25: IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10) and IA-07-CS-8 (460-319135-11).

March 21st, 2025 - Remaining samples on hold cancelled by the client.

Method 8260D - Volatile Organic Compounds by GC/MS
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS), IA-06-CS-8 (460-319135-15MSD) and Trip Blank (460-319135-16) were analyzed for Volatile Organic Compounds by GC/MS. The samples were prepared on 1/22/2025 and analyzed on 1/23/2025, 1/27/2025 and 3/5/2025.

The continuing calibration verification (CCV) associated with batch 460-1017719 recovered above the upper control limit for Acrolein, Acrylonitrile, Chloromethane and Methyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-1017719 recovered outside control limits for the following analytes: Acrolein and Methyl acetate. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-1018176 was outside the method criteria for the following analyte: Bromoform. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-1018066 was outside the method criteria for the following analytes: 1,1,1-Trichloroethane, Carbon tetrachloride and Trichlorofluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-1018066 recovered outside control limits for the following analytes: 2-Hexanone and 4-Methyl-2-pentanone (MIBK). These analytes were

biased low in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-1018176 recovered outside control limits for the following analytes: 1,2-Dibromo-3-Chloropropane and trans-1,3-Dichloropropene. These analytes were biased low in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-1024023 was outside the method criteria for the following analyte(s): Bromomethane (biased high); Bromoform and Dichlorodifluoromethane (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-1024023 recovered outside control limits for the following analytes: 1,2-Dibromo-3-Chloropropane (biased low) and Bromomethane (biased high). These analytes were not detected in the associated samples; therefore, the data have been reported.

Method 8270E - Semivolatile Organic Compounds (GC/MS)
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Semivolatile Organic Compounds (GC/MS). The samples were prepared on 1/23/2025 and 3/4/2025 and analyzed on 1/23/2025, 1/24/2025 and 3/4/2025.

The laboratory control sample (LCS) for preparation batch 460-1017771 and analytical batch 460-1017857 recovered outside control limits for the following analytes: Atrazine, Benzaldehyde and Hexachlorocyclopentadiene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 460-1017771 and analytical batch 460-1017857 recovered outside control limits for the following analytes: Atrazine, Benzaldehyde and Benzidine.

The continuing calibration verification (CCV) analyzed in batch 460-1017857 was outside the method criteria for the following analyte(s): Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-1017845 was outside the method criteria for the following analyte(s): 4,6-Dinitro-2-methylphenol and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample duplicate (LCSD) for batch preparation batch 460-1017758 and analytical batch 460-1017845 recovered outside control limits for the following analytes: 2-Methylnaphthalene. The laboratory control sample (LCS) recovery was within control limits. The associated sample data has been reported.

The continuing calibration verification (CCV) analyzed in batch 460-1023993 was outside the method criteria for the following analyte(s): Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 460-1023975 and analytical batch 460-1023993 recovered outside control limits for the following analytes: Atrazine and Hexachlorocyclopentadiene. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method NJ DEP EPH - New Jersey - Extractable Petroleum Hydrocarbons
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14) and IA-06-CS-8 (460-319135-15) were analyzed for New Jersey - Extractable Petroleum Hydrocarbons. The samples were analyzed on 1/24/2025

Job ID: 460-319135-1 (Continued)

and 3/6/2025.

Method NJDEP EPH - New Jersey Extractable Petroleum Hydrocarbons
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for New Jersey Extractable Petroleum Hydrocarbons. The samples were prepared on 1/23/2025, 1/24/2025 and 3/5/2025 and analyzed on 1/24/2025, 1/25/2025 and 3/6/2025.

Method 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Polychlorinated Biphenyls (PCBs) by Gas Chromatography. The samples were prepared on 1/23/2025, 1/25/2025 and 3/5/2025 and analyzed on 1/24/2025, 1/27/2025, 3/5/2025 and 3/6/2025.

The following samples required a copper clean-up, via EPA Method 3660B, to reduce matrix interferences: (460-319158-H-2-C), (460-319158-H-2-A MS) and (460-319158-H-2-B MSD).

The DCB Decachlorobiphenyl surrogate recovery for the CCV was outside acceptance limits (high biased) on the primary column : The recovery is within acceptance limits on the other column, therefore the data have been reported.IA-05-TS (460-319135-5).

Method 8081B - Organochlorine Pesticides (GC)
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Organochlorine Pesticides (GC). The samples were prepared on 1/23/2025, 1/25/2025 and 3/5/2025 and analyzed on 1/24/2025, 1/27/2025 and 3/5/2025.

The following samples required a copper clean-up, via EPA Method 3660B, to reduce matrix interferences: (460-319158-H-2-D), (460-319158-K-2-A MS) and (460-319158-K-2-B MSD).

The continuing calibration verification (CCV) associated with batch 460-1018163 recovered below the lower control limit for Methoxychlor on the primary column. Methoxychlor was within control limits on the secondary column therefore the data have been qualified and reported from the secondary column. (CCVIS 460-1018163/3).

The continuing calibration verification (CCV) associated with batch 460-1024330 recovered above the upper control limit for Methoxychlor on the secondary column. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 460-1024330/3).

The continuing calibration verification (CCV) associated with batch 460-1024271 recovered above the upper control limit for Endrin ketone and Methoxychlor. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 460-1024271/3).

The following samples were prepared outside of preparation holding time due to sample receipt : IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), (460-319165-C-15-M), (460-319165-B-15-G MS) and (460-319165-C-15-L MSD).

Method 6020B - Metals (ICP/MS)
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Metals (ICP/MS). The samples were prepared and analyzed on 1/24/2025 and 3/5/2025.

The field blank FB_20250121 (460-319135-8) contained calcium above the method detection limit (MDL). The result was confirmed by the analysis of the undigested sample.

Job ID: 460-319135-1 (Continued)

Method 7470A - Mercury (CVAA)
Sample FB_20250121 (460-319135-8) was analyzed for Mercury (CVAA). The sample was prepared and analyzed on 1/23/2025.

Method 7471B - Mercury (CVAA)
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Mercury (CVAA). The samples were prepared and analyzed on 1/24/2025, 1/27/2025 and 3/5/2025.

Method 9012B - Cyanide, Total andor Amenable
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), FB_20250121 (460-319135-8), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Cyanide, Total andor Amenable. The samples were prepared and analyzed on 1/24/2025 and 3/6/2025.

Method Moisture - Percent Moisture
Samples IA-03-CS-4 (460-319135-1), IA-03-CS-8 (460-319135-2), IA-02-TS (460-319135-3), IA-02-CS (460-319135-4), IA-05-TS (460-319135-5), IA-05-CS-4 (460-319135-6), IA-05-CS-8 (460-319135-7), IA-07-TS (460-319135-9), IA-07-CS-4 (460-319135-10), IA-07-CS-8 (460-319135-11), IA-06-TS (460-319135-12), DUP-01 (460-319135-13), IA-06-CS-4 (460-319135-14), IA-06-CS-8 (460-319135-15), IA-06-CS-8 (460-319135-15MS) and IA-06-CS-8 (460-319135-15MSD) were analyzed for Percent Moisture. The samples were analyzed on 1/22/2025.

Detection Summary
